Subject	Wildlife: General
Message	Antler point restrictions in 117 and 121 are working having seen more rut activity in the last to years and the buck to doe ratio having increased by 48 percent in both these zones even with the non harvest of does there by diluting the buck to doe ratio. Continuation of the APR even though the WDFW has recommended it be dropped is not a recommendation that will benefit the herds that are slowly coming back in these to units... Allow youths a more liberal season but allow the APR to run its first 5 years as the WDFW said it would run ,, if it is changed not running the course it will further undermine the faith of the states hunters who already have no faith in the dept and their lack of managing game on to mangae hunters instead.
