Hello Rochelle,

Thank you for your comment. I have attached the current burn plan for this specific prescribed burn which includes contingency lines to prevent undesirable spread of fire. This burn will only affect vegetation immediately surrounding the wetlands outlined in the maps associated with the SEPA and will occur during the winter which will avoid conflict with the growing season. Additionally, there is already a berm present that separates the lone agriculture circle from the proposed burn area.

Thanks again for reviewing this proposal,

Emily Grabowsky

The proposed prescribed burn is within close proximity to a couple of DNR agricultural leases. DNR is requesting to see a strong fire burn plan that would ensure the protection of the surrounding properties and their infrastructure.
