COMMENTS & RECOMMENDATIONS:
- At ~20 m there is an associated sedge marsh that is 5 - 10 m wide and 30 - 40 m long. It is about 60 cm higher than the stream and does not have a defined channel to the stream.
- At ~70 m there is a 60 cm debris fall that appears passable during high water.
- A slight gradient gain to ~200 m.
- The first 200 m have been clearcut and replanted to Sitka Spruce.
- Cover of slash, thinned alder, small conifers, and sedges to 200 m; above this point it gains in gradient with an abundance of blowdown.

Recommend:
- Low priority due to low flow.
- Controls to produce pools.
- Eliminate excessive debris clumps.
- Maintain the integrity of the stream.
