Photo 1. Existing diversion site. The proposed location for the new diversion is approximately 100-feet upstream

Photo 2. Approximate location of the existing diversion and proposed new location.

Photo 3. Pump diversion with a Riverscreen installed for a previous project in 2014. The new proposed pump diversion and fish screen will look similar to this. The on-site boom will lift the fish screen out of the water during periods of non-use. We anticipate the screen to be in the Yakima River from approximately April – October.
