

# Public Meeting Guidelines and Etiquette

Please note the following guidelines for our meeting:

- Upon joining the virtual meeting, your microphone will be muted automatically.
- In case of any technical issues during the meeting, notify us in the chat, and we will help you. Please note that the chat will only be monitored for technical assistance.
- Public comments are welcome and will be rotated between in-person and virtual attendees.
- To ask a question or make a comment, please use your device's "raise hand" feature. If on the phone, dial \*9 on Zoom , and if using a computer, click the hand/reactions icon at the bottom of your screen.
- During the comment period, the host will enable you to unmute yourself. You can then unmute yourself by pressing the mute button on your device or dialing \*6 on your phone.
- Keep discussions focused on the agenda items and questions at hand. Offensive, disrespectful, or derogatory language, including profanity, personal attacks, threats, or insults towards individuals, governments, or organizations, is strictly prohibited.
- Assume positive intentions from those speaking and listen respectfully.
- To ensure a balanced discussion, limit your comments to two minutes with one clarifying follow-up question.
- Provide constructive feedback regarding the fisheries in which you participate. Remember that the most compelling comments are those that pertain to the topics under discussion.
- WDFW staff may close public comment to stay on schedule with the agenda or to provide others who still need to comment with an opportunity to speak.
- The Hybrid meetings will be recorded and posted online.
- If you have further questions or comments, please submit them in written format on our public comment webpage; [Public input | Washington Department of Fish & Wildlife](#)

# Statewide Salmon Forecast Meeting

## March 1, 2024

# Meeting Agenda

Note: WDFW staff will take questions and comments following each presentation. Regional discussion sessions will provide opportunities to ask questions and provide comments as well.

# North of Falcon – Setting Salmon Fishery Seasons for 2024

Kyle Adicks

# What is North of Falcon?

- North of Falcon is the annual, cooperative process to plan salmon seasons for Washington waters.
- The name refers to waters north of Oregon's Cape Falcon, which marks the southern border of Washington's management of salmon stocks.
- One component of a larger salmon season-setting process that also involves the state, tribal governments, federal regulators, other U.S. states, and Canada.

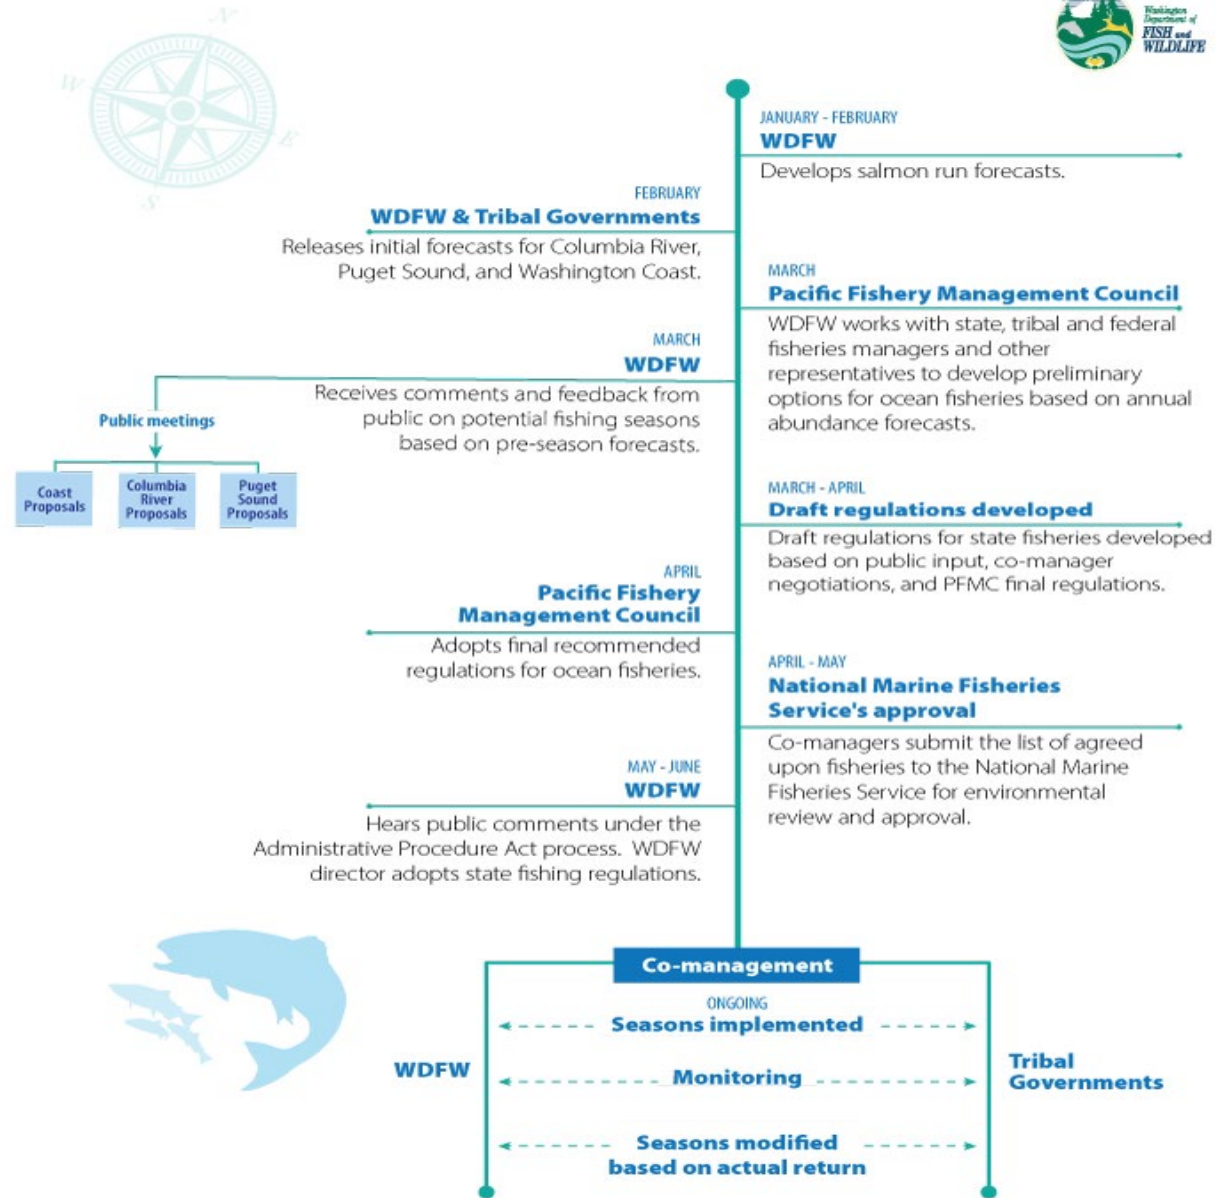

# What guides North of Falcon?

Fishery managers must weigh many factors when developing salmon seasons, including:

- Endangered Species Act (ESA) constraints
- Commission policy
- Pacific Salmon Treaty obligations
- Tribal co-management: Washington's treaty tribes manage their own fisheries, sharing data and splitting harvest with the state
- Extensive monitoring and evaluation of fisheries statewide

# North of Falcon timeline

# 2024 NOF Meeting Schedule

Meeting links and materials are available on the WDFW webpage <https://wdfw.wa.gov/fishing/management/north-falcon/public-meetings>

| <b>Date</b> | <b>Purpose</b>  |
|-------------|---|
| Feb. 28     | Willapa Bay – Grays Harbor Forecast Meeting             |
| Mar. 1      | Statewide Forecast Meeting                              |
| Mar. 6-11   | Pacific Fishery Management Council Meeting – Fresno, CA |
| Mar. 13     | North of Falcon #1 – Statewide Proposals                |
| Mar. 19     | Coastal Freshwater and PS Recreational Fisheries        |
| Mar. 21     | PS Freshwater and Marine Recreational Fisheries         |
| Mar. 21     | Columbia River Fisheries – downstream of Snake River    |

# 2024 NOF Meeting Schedule (cont.)

Meeting links and materials are available on the WDFW webpage <https://wdfw.wa.gov/fishing/management/north-falcon/public-meetings>

| <b>Date</b> | <b>Purpose</b>   |
|-------------|--|
| Mar. 27     | North of Falcon #2 – Statewide Fisheries                       |
| Mar. 27     | Upper Columbia River and Snake River Fisheries                 |
| Mar. 28     | Willapa Bay/Grays Harbor Fisheries                             |
| Apr. 6-11   | Final Pacific Fishery Management Council Meeting – Seattle, WA |

# Southern Resident Orca Update & Reducing The Impact of Vessels

Julie Watson

Killer Whale Policy Lead

Washington Department of Fish and Wildlife

March 2024

Washington  
Department of  
**FISH and  
WILDLIFE**

# Context

A screenshot of a web browser showing the homepage of the Southern Resident Orca Recovery website. The browser's address bar shows 'https://orca.wa.gov'. The website has a dark blue header with the title 'Southern Resident Orca Recovery' and navigation links: 'About', 'Orca 101', 'Progress', 'News and Events', and 'Get Involved'. The main content area features a large image of orcas swimming underwater. Below this, a light blue box contains the text 'A Species in Crisis' followed by the main heading 'Saving Southern Resident Orcas'. Underneath is a sub-headline: 'Join thousands of Washingtonians as we work together to save these magnificent creatures.' and a button labeled 'Our Partners'. At the bottom right of the page, there is a language dropdown menu set to 'English' and a decorative wavy line graphic.

# Threats to Southern Resident orca recovery

Too much noise  
& disturbance

Human  
population  
growth

Inbreeding

Too much pollution

Too few fish

Climate change

# The Department is required to adaptively manage the CWW license program and rules.

“The Department shall complete an analysis and report...on the effectiveness of and any recommendations for changes to the **whale watching rules**, **license fee structure**, and **approach distance rules** [in 2022, 2024, and 2026].”

*RCW 77.65.620 (5)*

# Adaptive Management Process

# This work is embedded in a long-term recovery and adaptive management effort.

# The adaptive management process was informed by several sources of data.

- Department review of relevant studies and best available science
- Third-party analysis of compliance, enforcement, and reporting data
- Third-party analysis of feedback collected through online survey and stakeholder focus groups
- Government partner coordination

## Report Findings

# Vessel traffic is linked to poor SRKW foraging.

- Foraging success decreases with vessels traveling within 1.5 km (1640 yards), even those operating at just 1-2 knots
- Foraging success further decreases with vessels closer than 400 yards
- Females are less successful than males (population-level implications)
- Whales dive more steeply
- Whale surface behavior increases

# Key Findings

1. Vessel regulations could be improved to better support SRKW.
2. Vessel regulations are difficult to communicate and confusing for the average boater.
3. SRKW-viewing rules restrict CWW vessels more than other vessels.
4. License-holders likely comply with CWWLP requirements but cite administrative burdens.
5. The “sentinel” and “magnet” effects of CWW are not mutually exclusive and can co-occur.
6. The Department’s “vulnerable whales” process could be refined.
7. Increased WDFW Enforcement on-the-water presence would be appreciated by all stakeholders.

## Outcomes & Next Steps

# 2022 Department Recommendation

Increase the vessel buffer around SRKW to 1,000 yards (approximately one-half nm) for all vessels, including CWW vessels, and make complementary changes to the commercial whale watching licensing program.

# ESSB 5371 Adopted!

Signed 5/15/2023

## Next Steps:

- Promote early adoption of 1,000-yard setback (-2025)
- Update and Promote Be Whale Wise campaign and messaging, expand outreach, improve tools
  - **Opportunity:** Orca Regulation Communications Advisory Group (ORCA Group) **workshops**
- Coordinate with NOAA and Canada on evolving regulations aimed at protecting SRKW from vessel impacts.

# 2023/2024 Environmental Outlook

Dr. Marisa Litz & Dr. Laurie Weitkamp (NOAA)

# Outline

- ➔ Update on physical conditions (Temperature, El Niño, Marine Heatwaves)
- ➔ Notable biological observations
- ➔ NOAA environmental indicators (salmon stoplight chart)

## Take-Home Messages:

- 🌡️ Climate variability will continue to impact salmon returns in 2024
- 🏠\* Stressors affect **BOTH** freshwater and marine life history stages of salmon
- ➔ Effect of 2023-2024 warm El Niño still unknown

# Global land and ocean surface temperatures warmest on record in 2023

Global Land and Ocean  
January-December Temperature Anomalies

Land = **2.42°C** warmer than average  
Ocean = **1.00°C** warmer than average

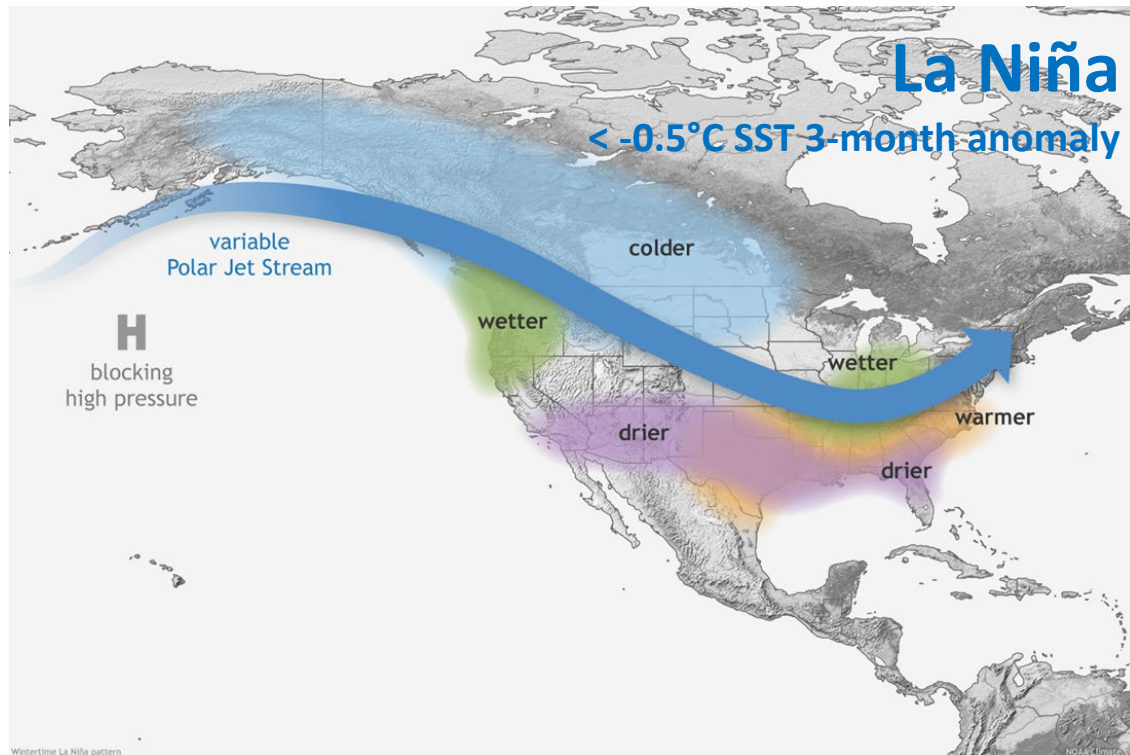

[www.ncdc.noaa.gov](http://www.ncdc.noaa.gov)

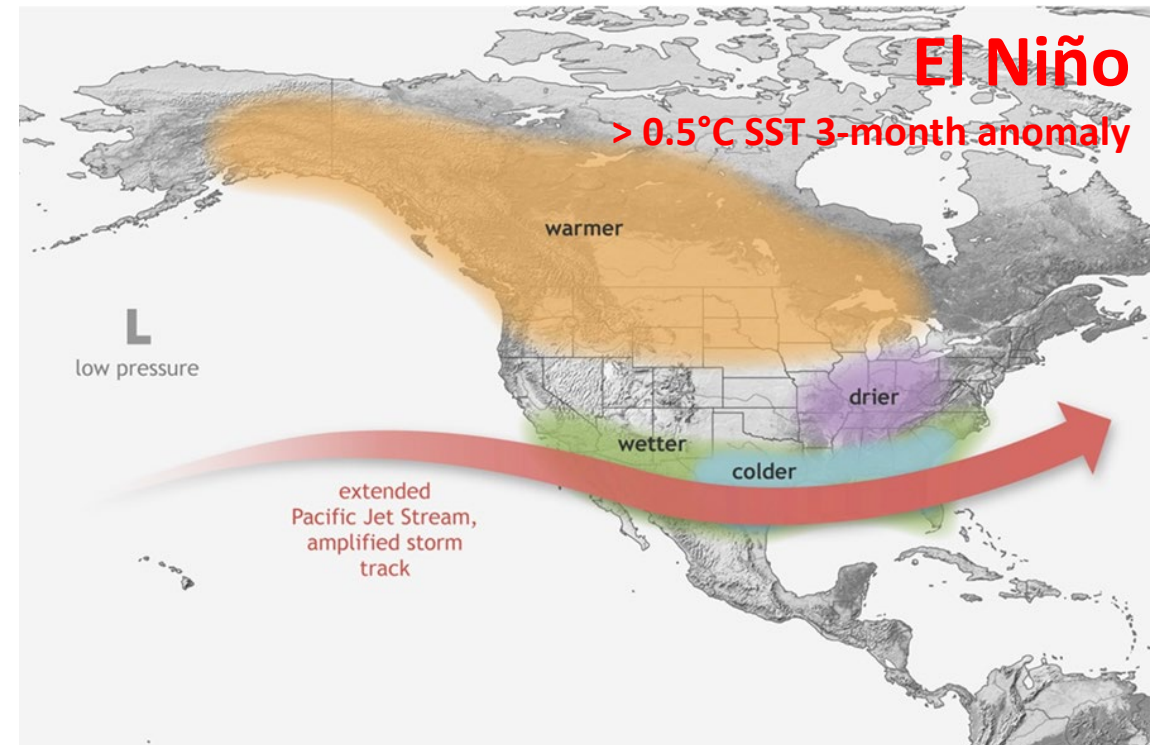

# Three-peat La Niña Aug 2020-Jan 2023 was favorable for salmon marine survival

**Good for PNW Salmon**

**Bad for PNW Salmon**

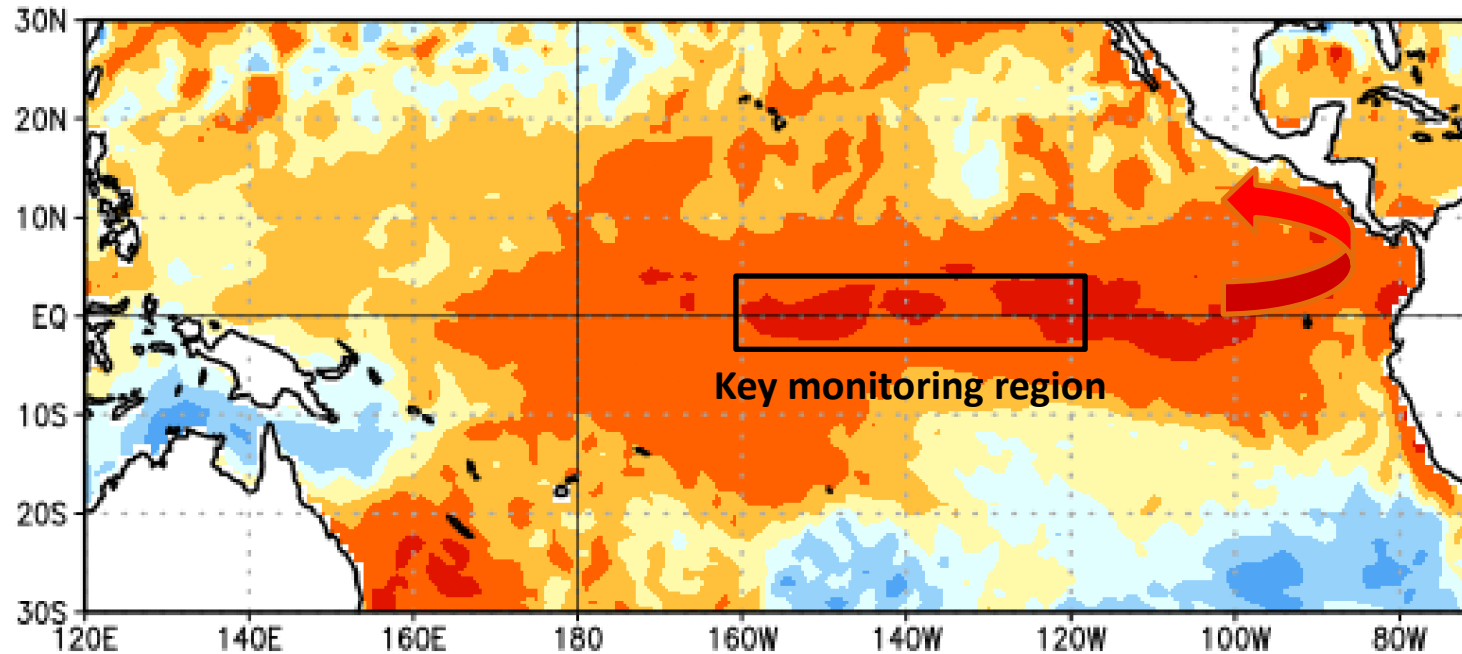

[www.climate.gov](http://www.climate.gov)

# Current El Niño classified as strong, but impacts may be short-lived

Sea Surface Temperature (SST) Anomalies

31 JAN 2024

[www.climate.gov/enso](http://www.climate.gov/enso)

# Strong El Niño's/La Niña's (1982-2024)

[www.psl.noaa.gov/enso/mei/](http://www.psl.noaa.gov/enso/mei/)

# Models predict El Niño will end by spring with >50% chance of a La Niña by summer

[www.climate.gov/enso](http://www.climate.gov/enso)

# The “warm blob” formed May 2023 reached 7.6 million km<sup>2</sup> (4<sup>th</sup> largest by area)

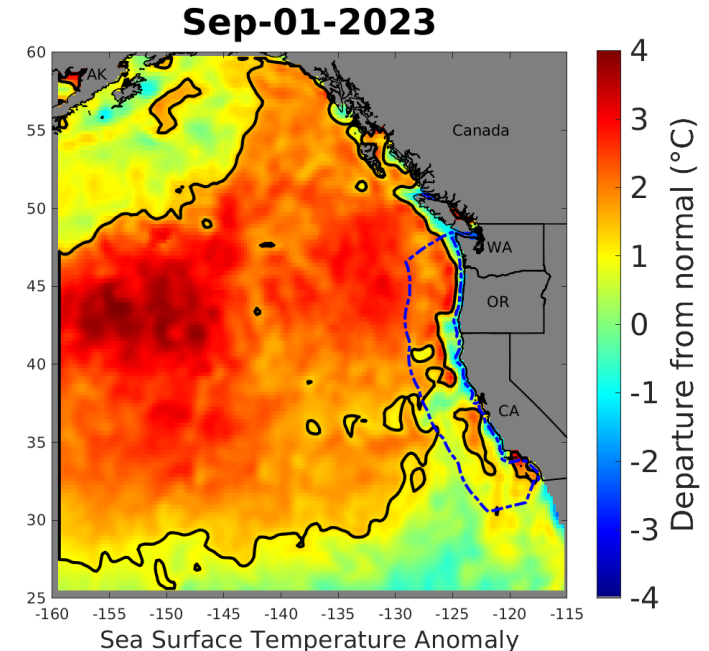

2<sup>nd</sup> largest/1<sup>st</sup> longest event back to 1982

3<sup>rd</sup> largest/3<sup>rd</sup> longest event back to 1982

1<sup>st</sup> largest/4<sup>th</sup> longest event back to 1982

4<sup>th</sup> largest/7<sup>th</sup> longest event back to 1982

# Snowpack tracking 60% of normal, causing low water supply in 2024

[www.wcc.nrcs.usda.gov](http://www.wcc.nrcs.usda.gov)

# Outlook over next 3 months (Mar-May)

Temperature: 60-70% chance temperatures will be **warmer** than average

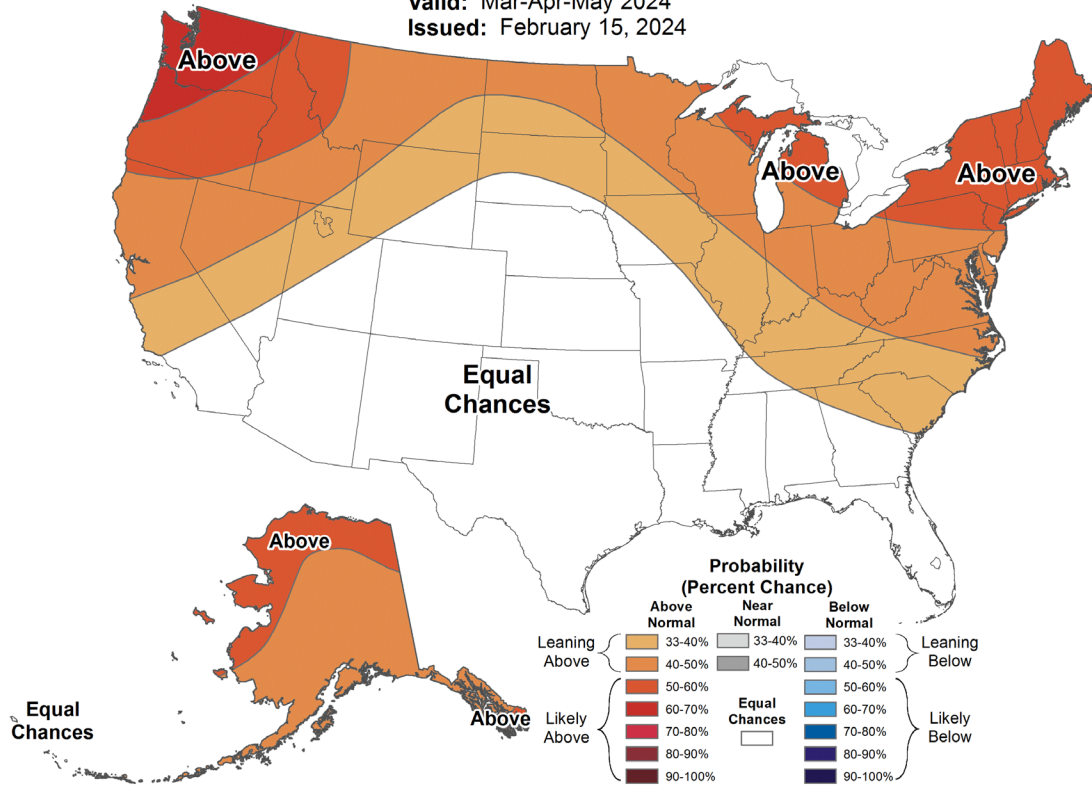

Precipitation: 30-50% chance precipitation will be **below** average

## Seasonal Temperature Outlook

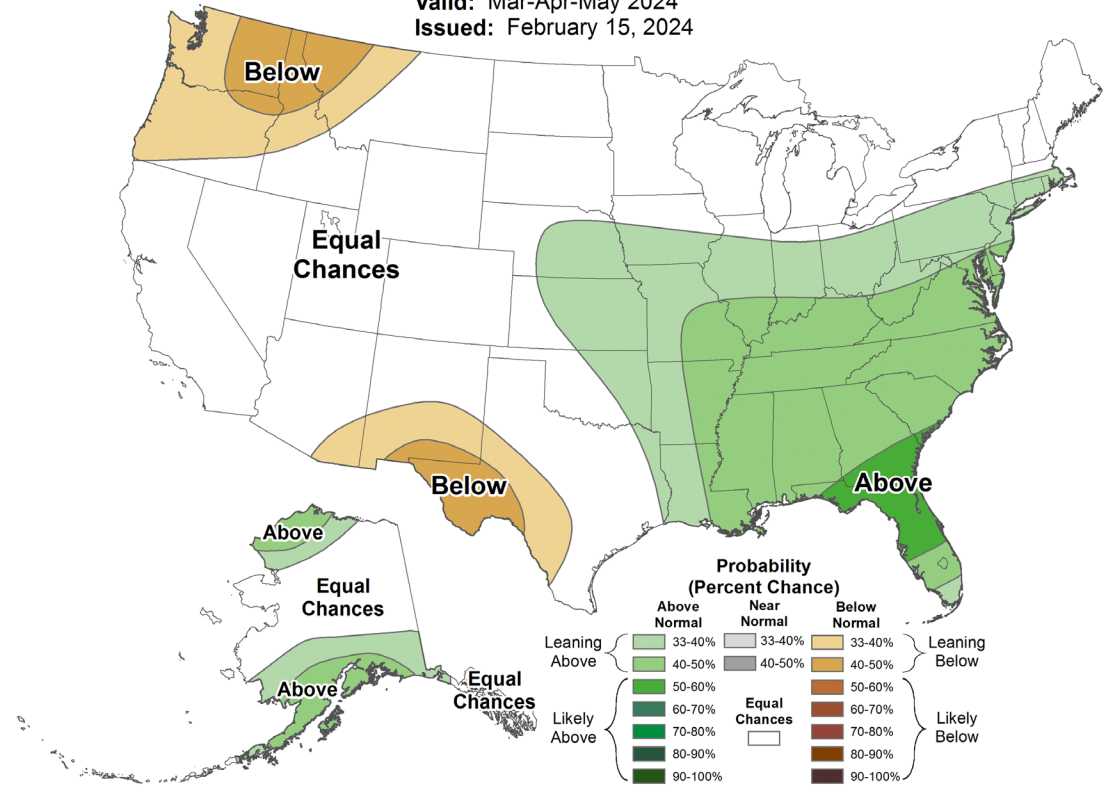

Valid: Mar-Apr-May 2024  
Issued: February 15, 2024

## Seasonal Precipitation Outlook

Valid: Mar-Apr-May 2024  
Issued: February 15, 2024

[www.cpc.ncep.noaa.gov/products/forecasts](http://www.cpc.ncep.noaa.gov/products/forecasts)

# Biological responses to the warming ocean

2021

Tropical fish such as opah off Seaside

39-fold increase in market squid off WA

Billions of organisms die in June heat wave

Dungeness crab season started on time with high landings

2022

More tropical fish caught off WA: shortbill spearfish and mahi mahi

Closure of snow crab fishery in AK for the first time in history

European green crab invasion continues north and east

2023

Bluefin tuna washed up on Orcas Island

Salmon spawning in the Arctic: Anaktuvuk River

King of the salmon

New record 21.0 lb mahi mahi caught off Washington

Chinook salmon yearling

Rank = **19** of 26 years

Coho salmon yearling

Rank = **8** of 26 years

# Zooplankton (prey) species = “cool” conditions

[www.nwfsc.noaa.gov](http://www.nwfsc.noaa.gov)

# Conclusions

- 🚢 Smolts entering the ocean experienced good ocean conditions the last 3 years (2021-2023)
- 🌡️ El Niño impacts in Washington minimal, but keep an eye on:
  - ✓ Sea surface temperature, marine heatwaves
  - ✓ Snowpack (drought, low flow, warm summer stream temperatures)
- ↔️ Transition to La Niña this summer could improve marine survival of salmon rearing in the ocean

# WA Coast and Puget Sound 2023 Returns and 2024 Forecasts

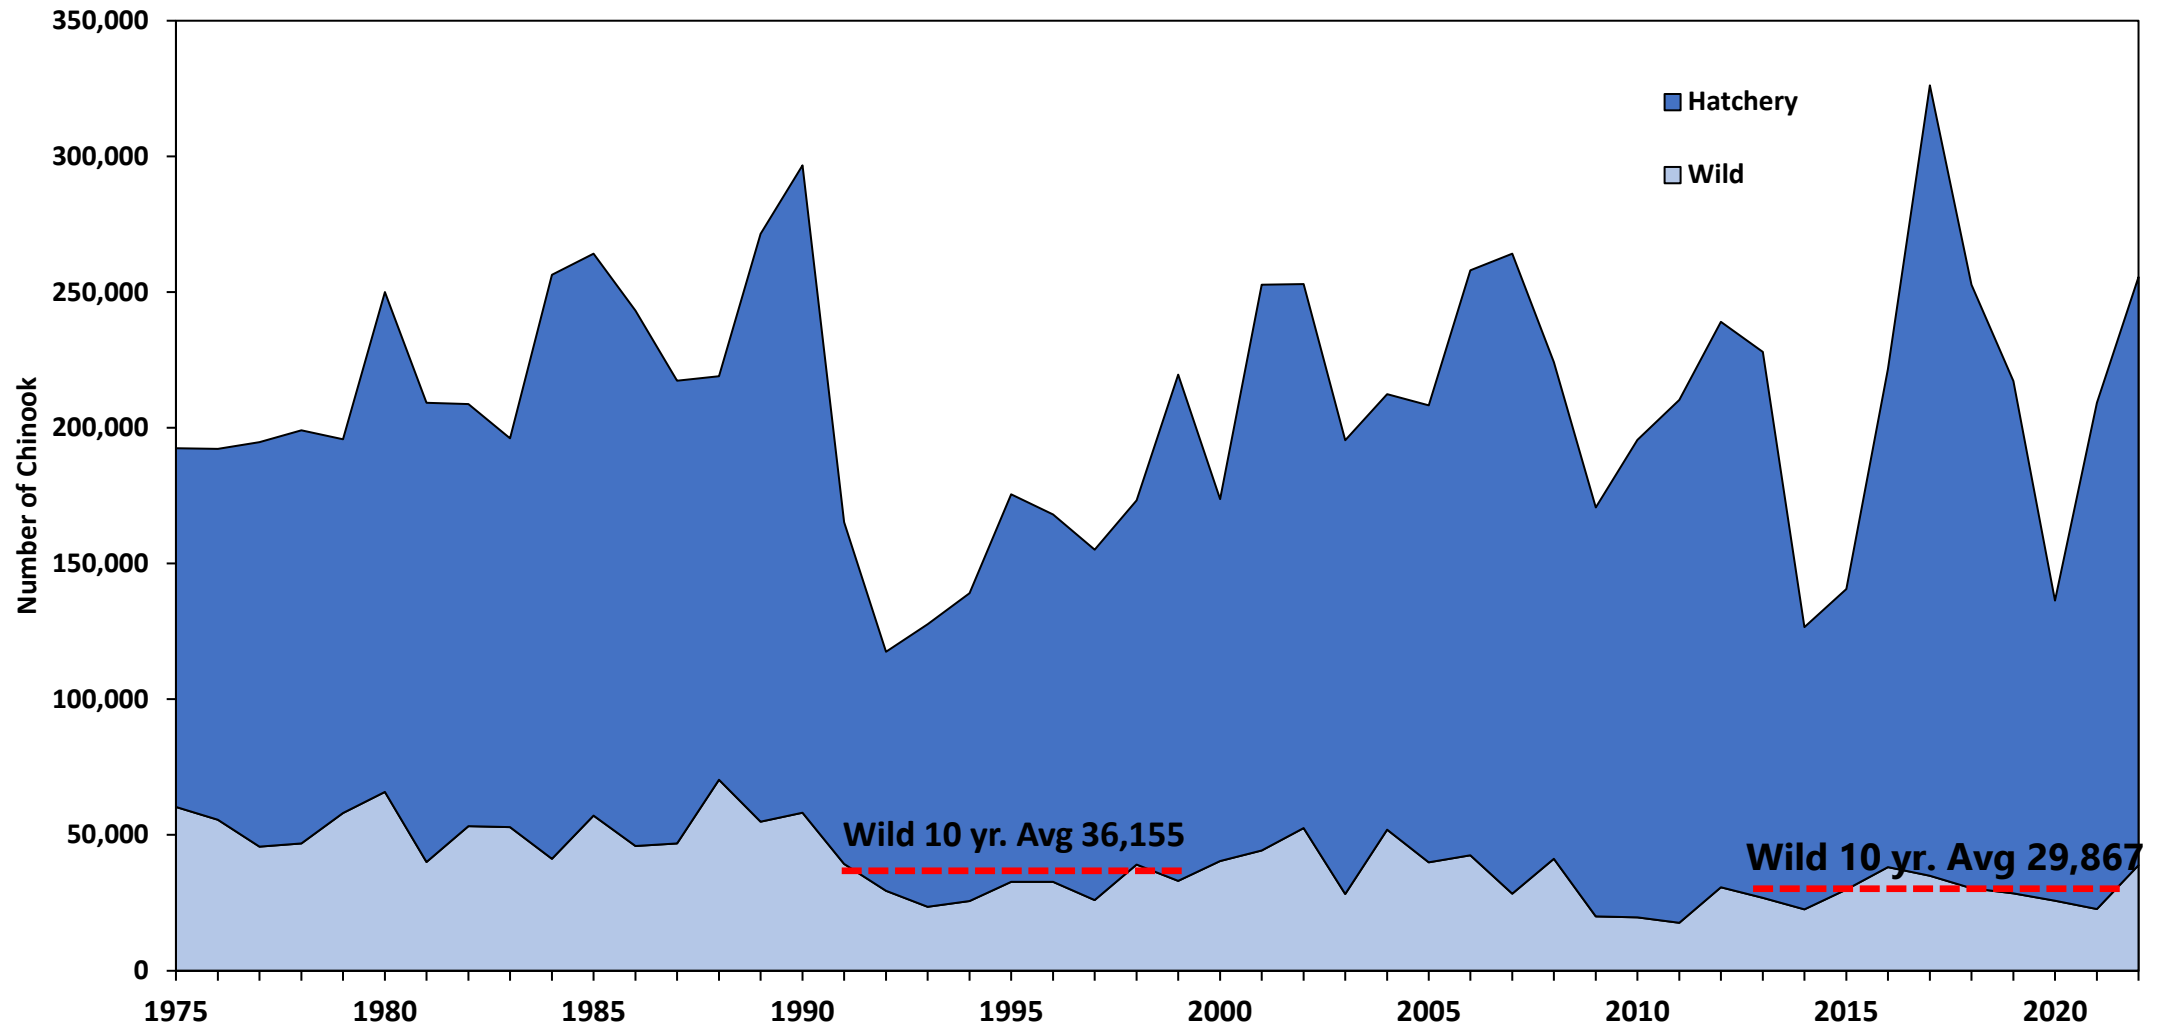

Kirsten Simonsen, PhD and Matthew Bogaard, MSc

# Chinook

# Chinook Historical Runsize – Puget Sound

Wild Chinook ↓ ~28% since 10yr avg. prior to listing under ESA in 1999

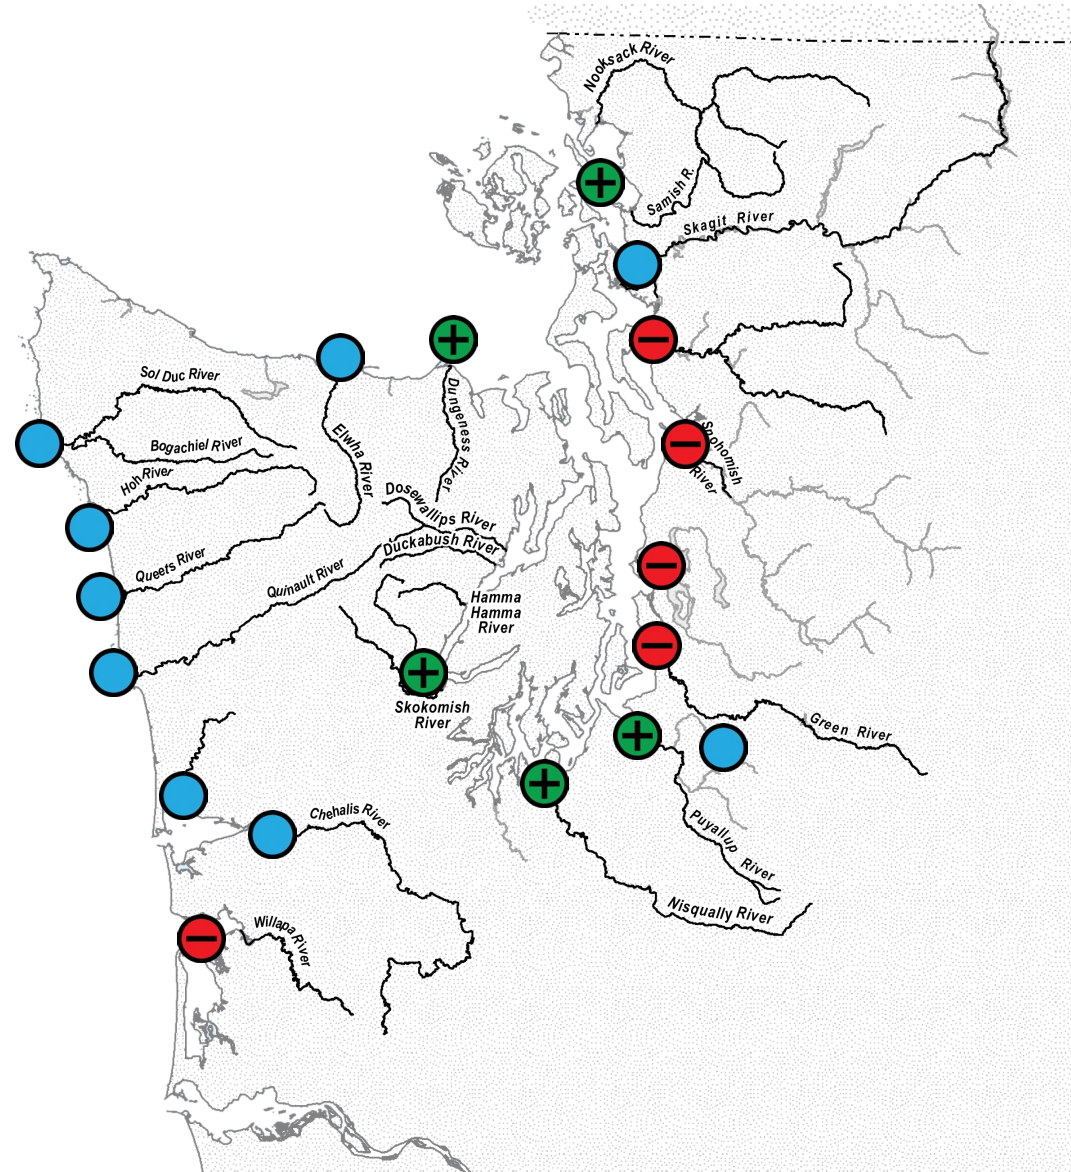

# 2023 Fall Chinook Returns

- All returns are preliminary
- Returns range from **Poor** to **Good** in Puget Sound
- Returns were mostly **Neutral** on the Coast

Relative to Recent 10yr Avg. Runsize

- ⊕ Good > 125%
- Neutral 75-125%
- ⊖ Poor < 75%

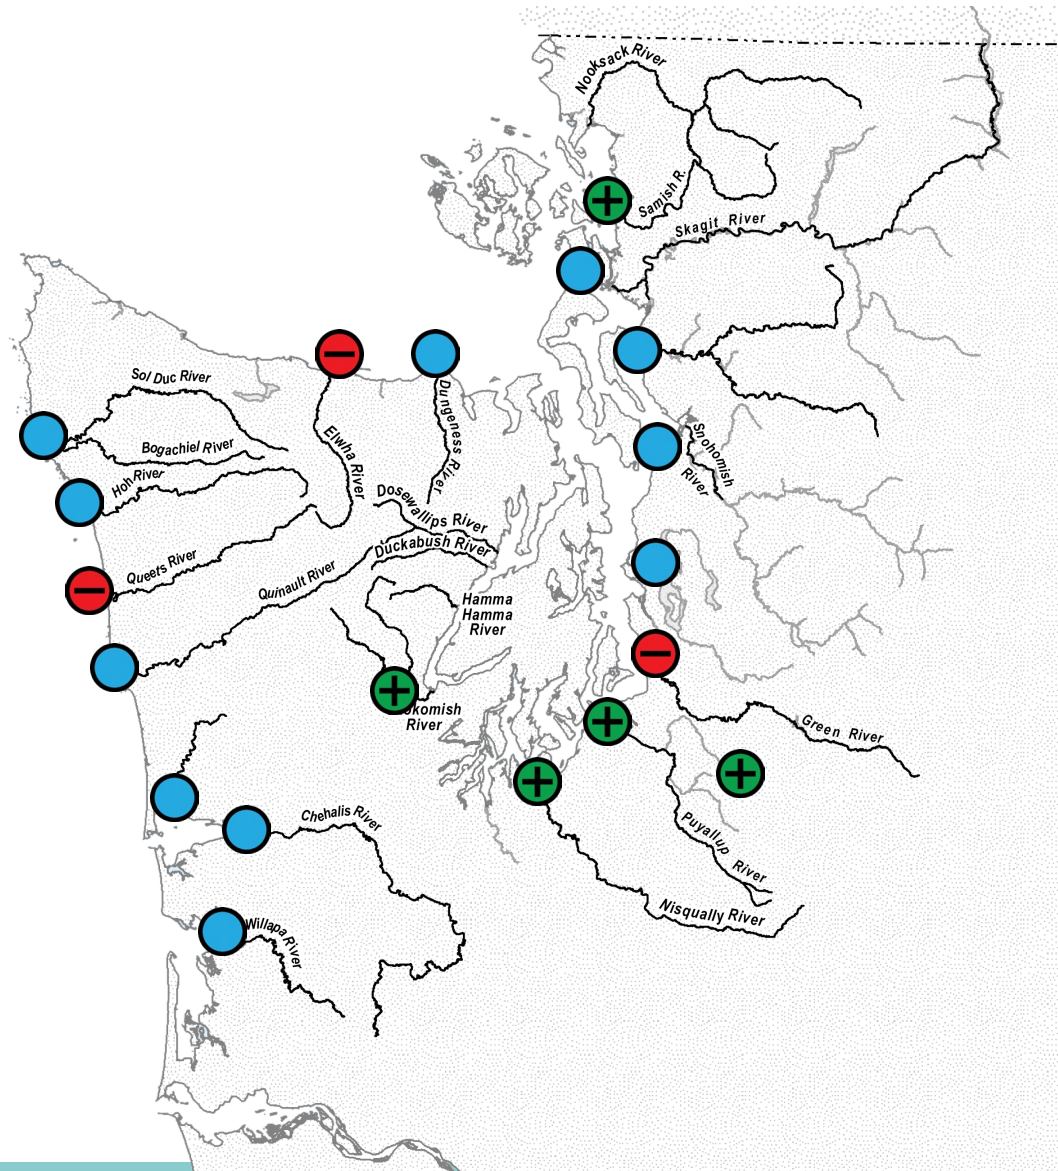

# 2024 Fall Chinook Forecasts

- Forecasts mostly range from **Neutral** to **Good** for Puget Sound and **Neutral** for the Coast
  - Puget Sound – **251,333 Total**
    - **223,179 H / 28,154 W**
  - Coast – **73,181 Total**
    - **36,437 H / 36,744 W**
- Relative to Recent 10yr Avg. Runsize**

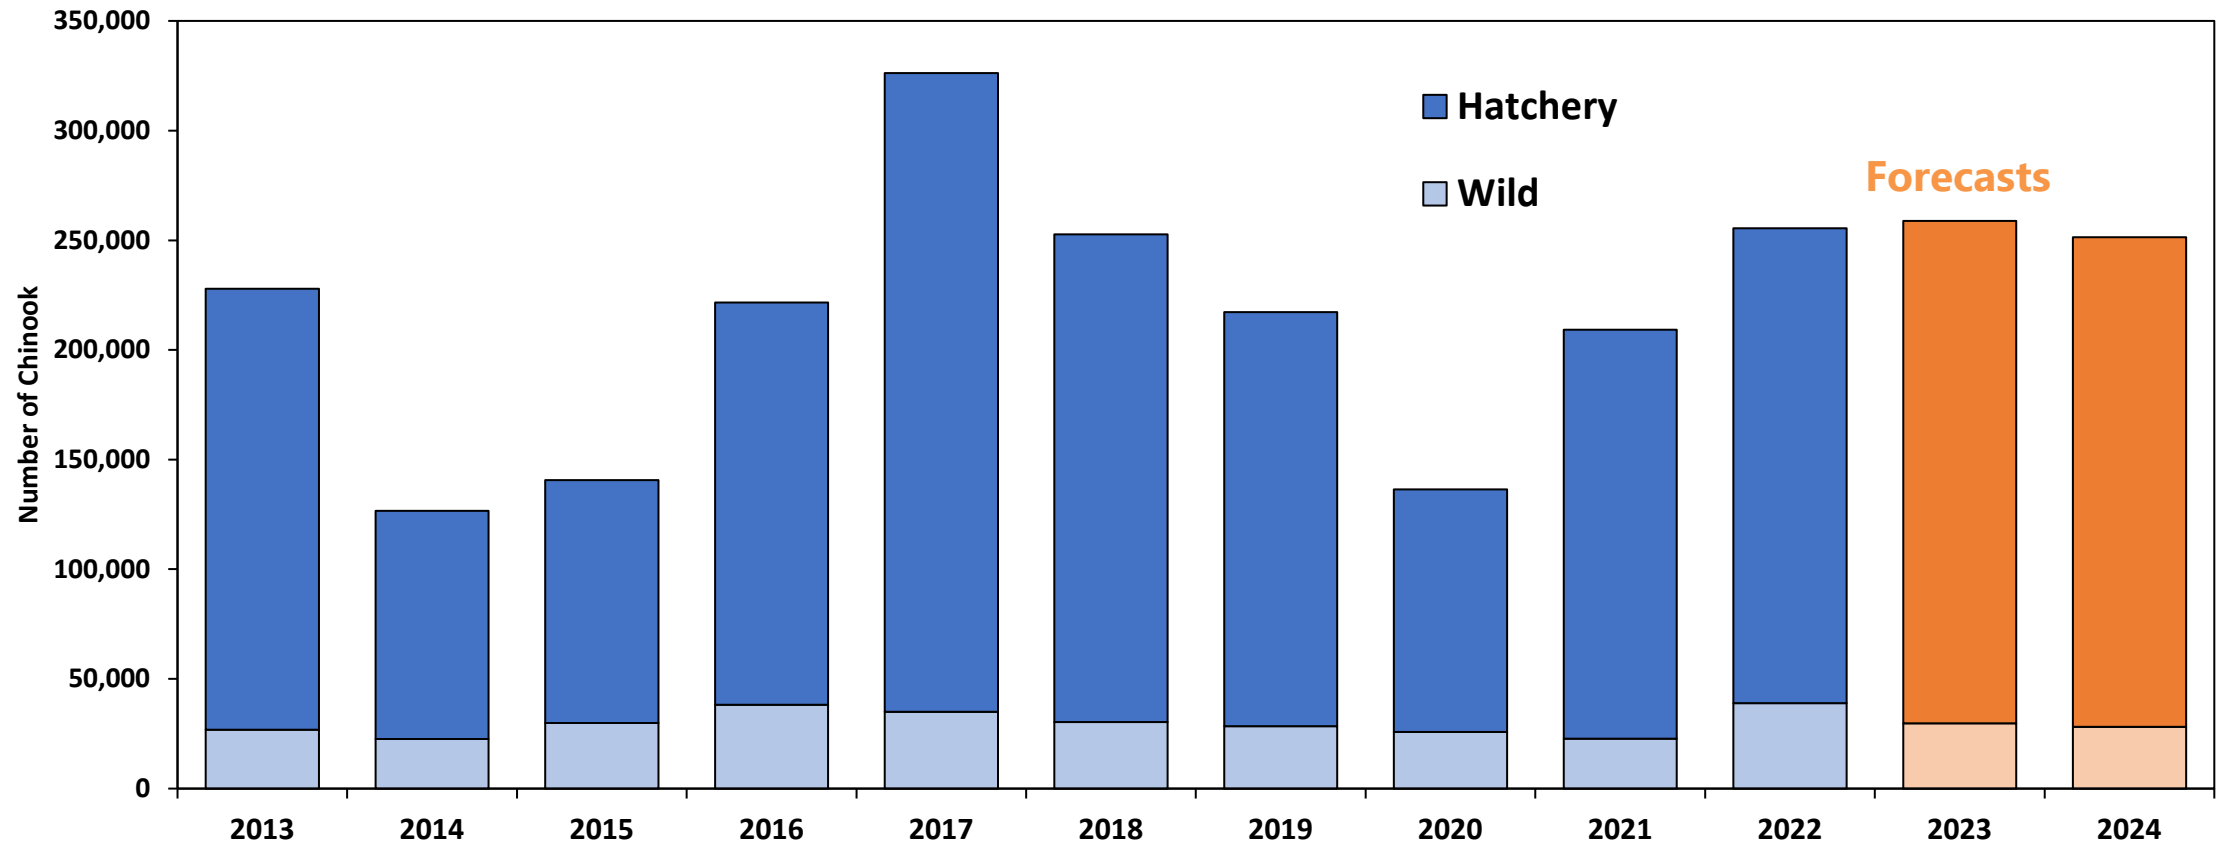

- ⊕ Good > 125%
- Neutral 75-125%
- ⊖ Poor < 75%

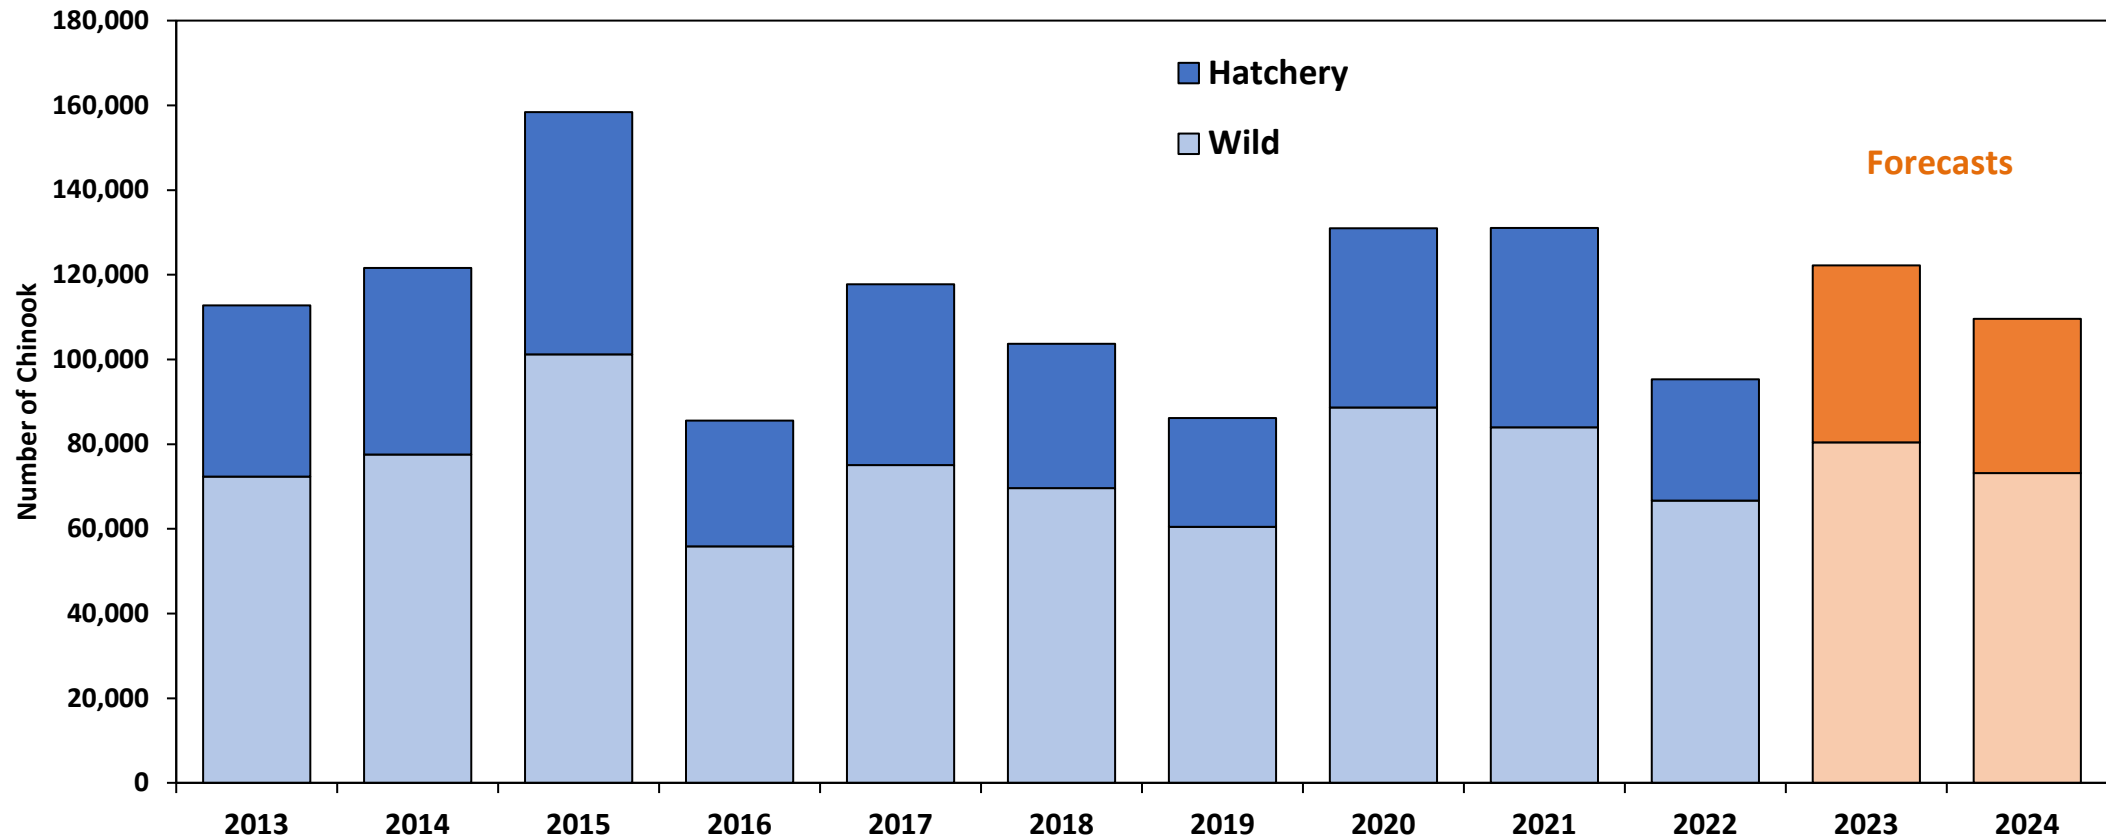

# Puget Sound Chinook Forecasts

- Hatchery **↑ 22%** and Wild **↓ 6%** over recent 10-year average adult return
- Hatchery **↓ 3%** and Wild **↓ 5%** compared to 2023 forecast
- Total PS Chinook **↑ 17%** from the 10 yr. avg runsize and **↓ 3%** from last years forecast

# Coastal Chinook Forecasts

- Hatchery **↓ 7%** and Wild **↑ 2%** over recent 10-year average adult return
- Hatchery **↓ 13%** and Wild **↓ 5%** compared to 2023 forecast
- Total Chinook **↓ 3%** from the 10 yr. avg runsize and **↓ 9%** from last years forecast

# Coho

# Coho Historical Runsize – Puget Sound

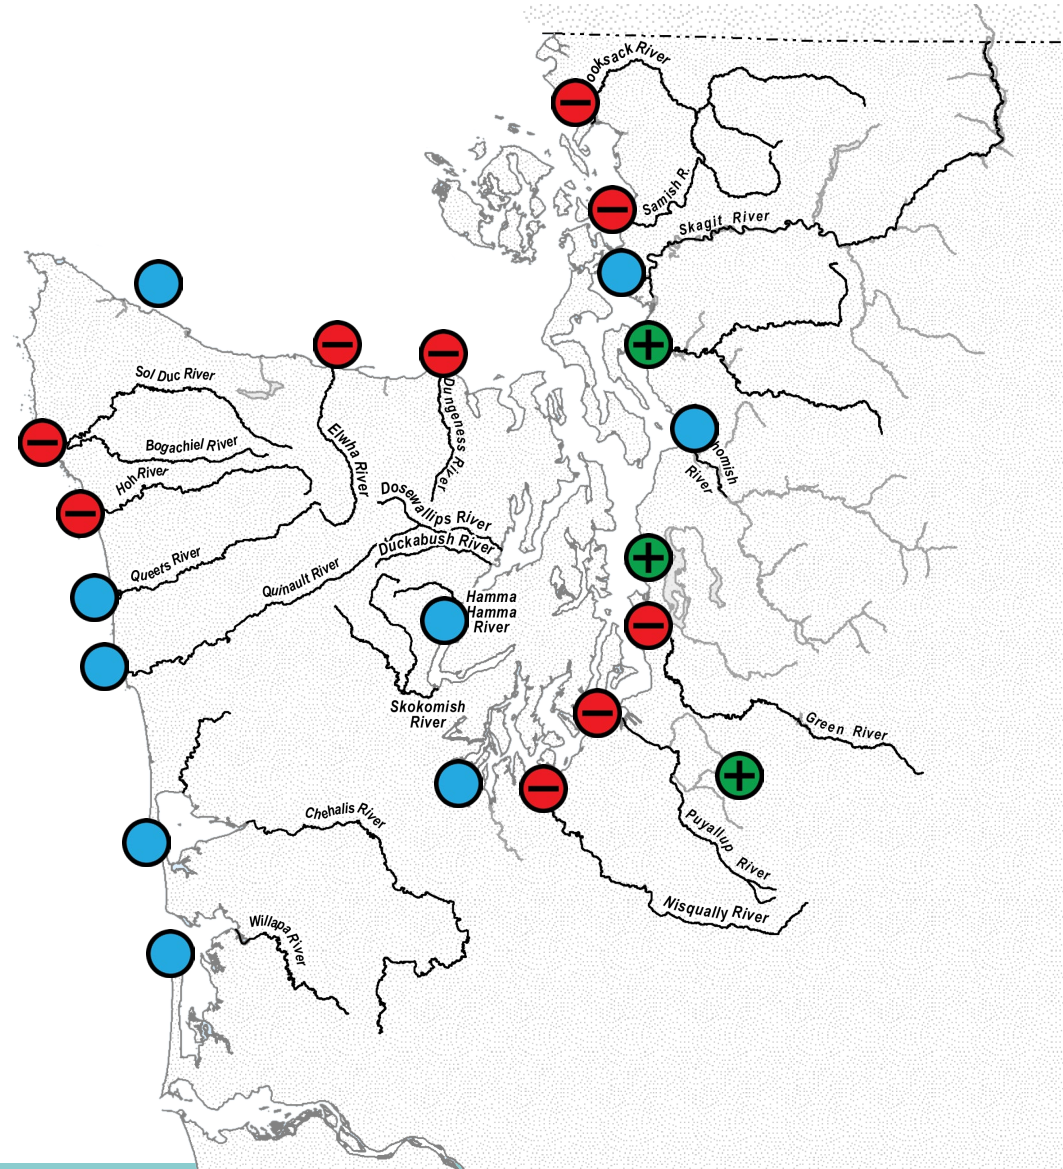

# 2023 Coho Returns

- All returns are preliminary
- Returns ranged from **Good** to **Poor** for Puget Sound
- Returns for the coast were **Neutral to Poor**

## Relative to Recent 10yr Avg. Runsize

- ⊕ Good > 125%
- Neutral 75-125%
- ⊖ Poor < 75%

# 2024 Coho Forecasts

- Forecasts range mostly from **Neutral** to **Good** across Puget Sound

- **722,134 Total**

- **419,966 H / 302,168 W**

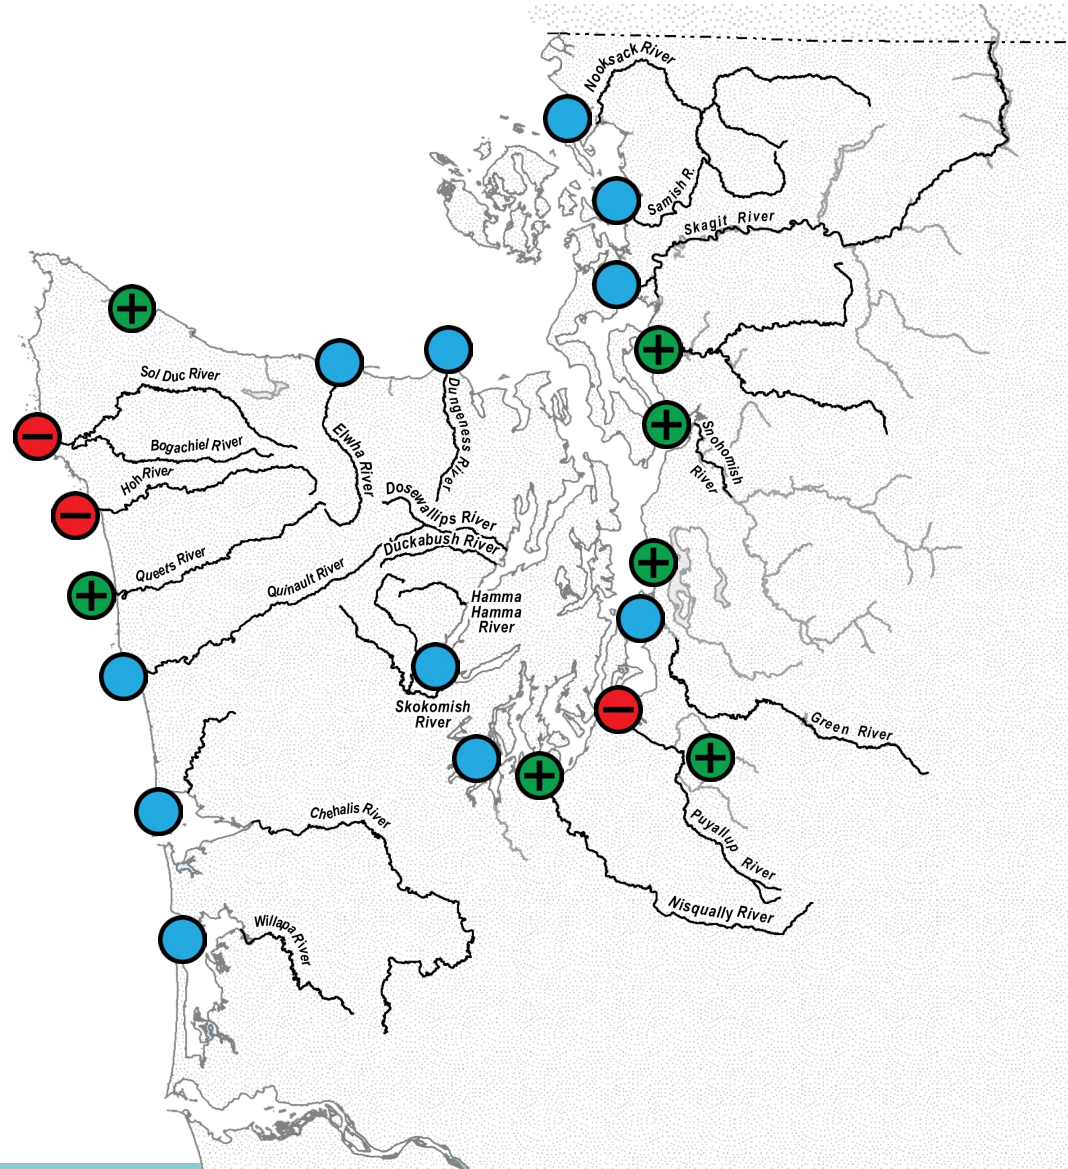

- Forecasts range mostly from **Neutral** to **Poor** across the Coast

- **383,908 Total**

- **225,951 H / 157,957 W**

**Relative to Recent 10yr Avg. Runsize**

-  Good > 125%
-  Neutral 75-125%
-  Poor < 75%

# Puget Sound Coho Forecasts

- Hatchery **↑ 43%** and Wild **↑ 15%** over recent 10-year average
- Hatchery **↓ 9%** and Wild **↑ 2%** compared to 2023 forecast
- Total PS Coho **↑ 30%** from the 10 yr. avg runsize and **↓ 5%** from last years forecast

# Coastal Coho Forecasts

- Hatchery **↑ 52%** and Wild **↑ 15%** over recent 10-year average adult return
- Hatchery and Wild **↓ 22%** compared to 2023 forecast
- Total Coho **↑ 35%** from the 10 yr. avg runsize and **↓ 22%** from last years forecast

# Chum

# Chum Historical Run Size

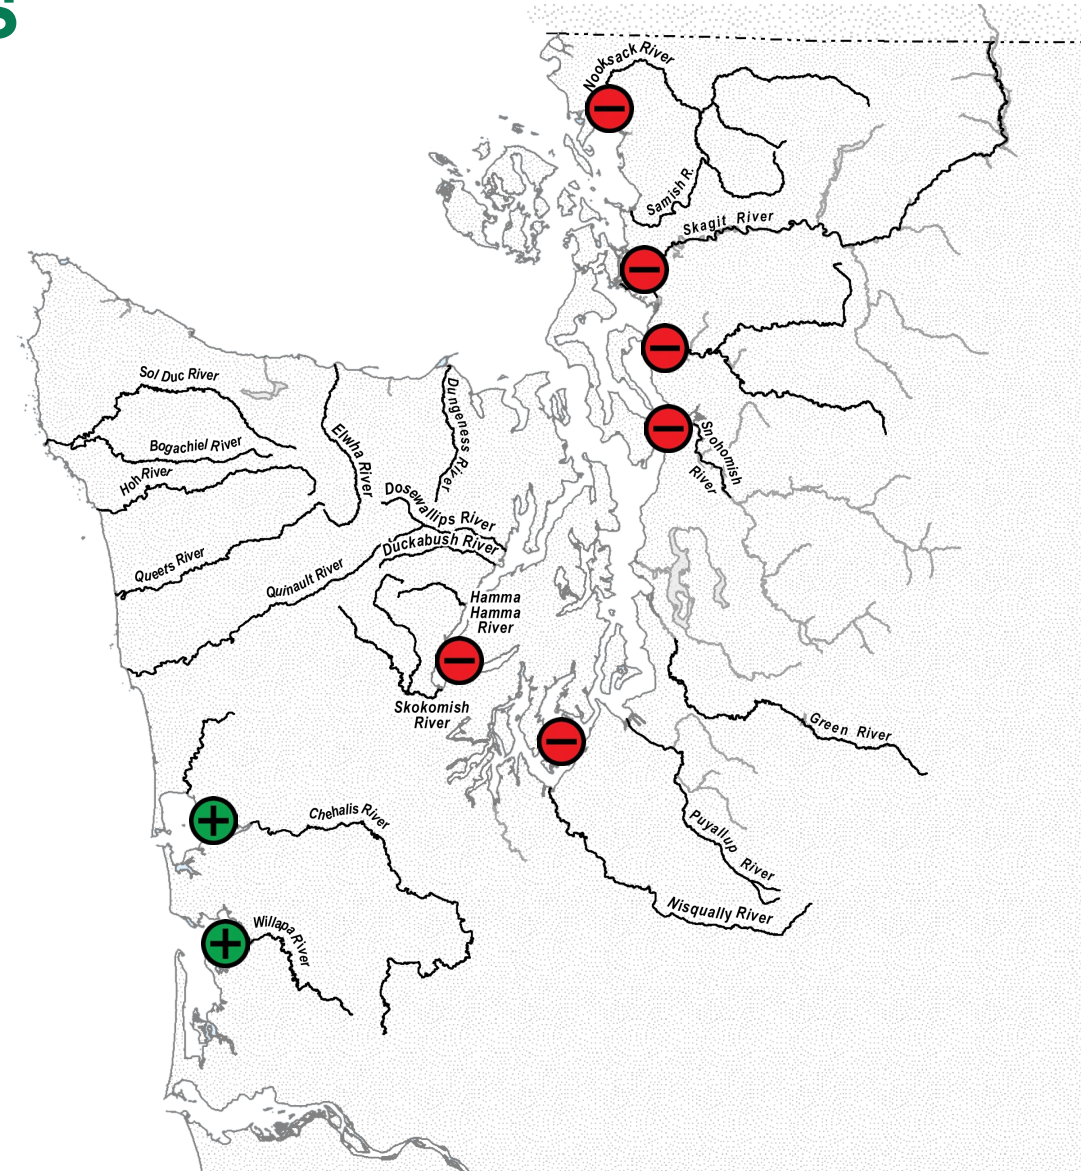

# 2023 Fall Chum Returns

## Relative to Recent 10yr Avg. Escapement

- ⊕ Good > 125%
- ⊙ Neutral 75-125%
- ⊖ Poor < 75%

- Returns were **Poor** throughout Puget Sound
- Returns were **Good** along the coast
- HC and South Sound are relative to in-season updated run sizes, not escapement

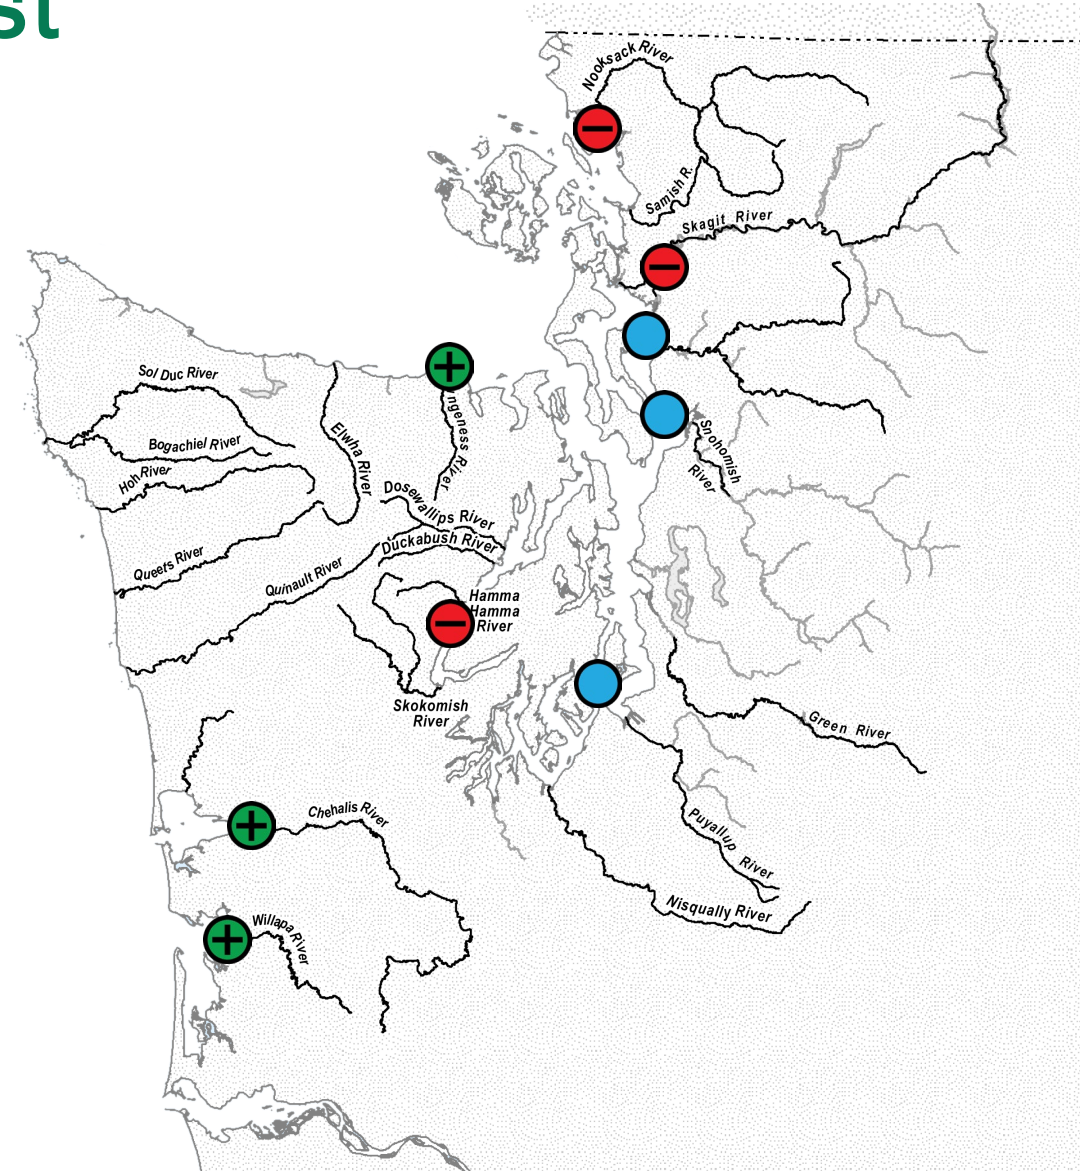

# 2024 Fall Chum Forecast

## Relative to Recent 10yr Avg. Run size

-  Good > 125%
-  Neutral 75-125%
-  Poor < 75%

- Forecasts range from **Poor** to **Neutral** in Puget Sound
- Hood Canal – **254,900**
- Central/S. Sound – **486,562**
- Willapa – **80k**
- Grays H – **69k**

# Puget Sound Fall Chum Forecasts

Hatchery **↓ 46%** and Wild **↓ 25%** over recent 10-year avg.

# Coastal Chum Forecasts

Willapa Bay **↑ 40%** and Grays Harbor **↑ 24%** over recent 10-year avg.

# Sockeye

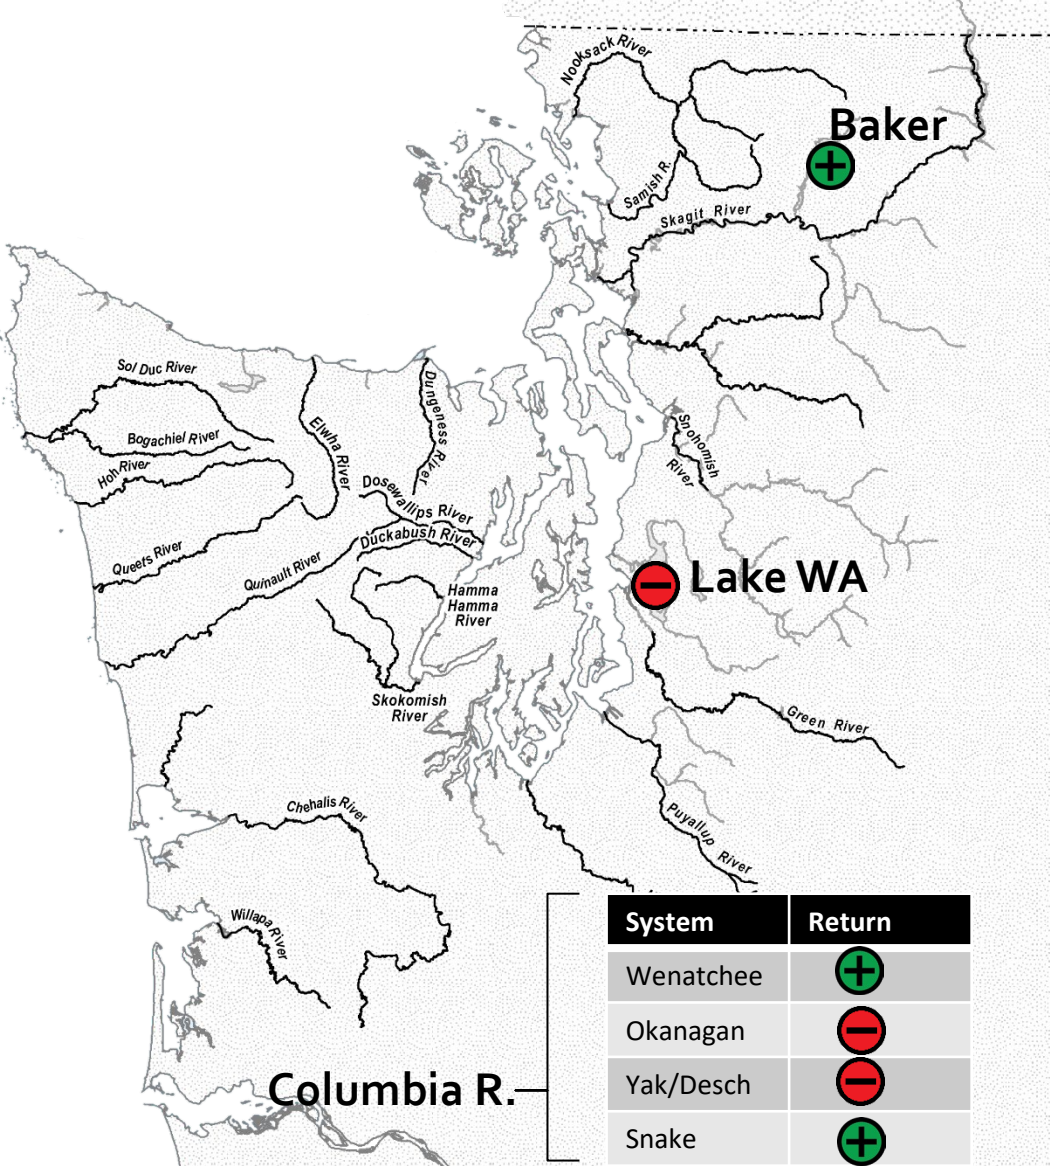

# Puget Sound Sockeye Run Size

# 2023 Sockeye Returns

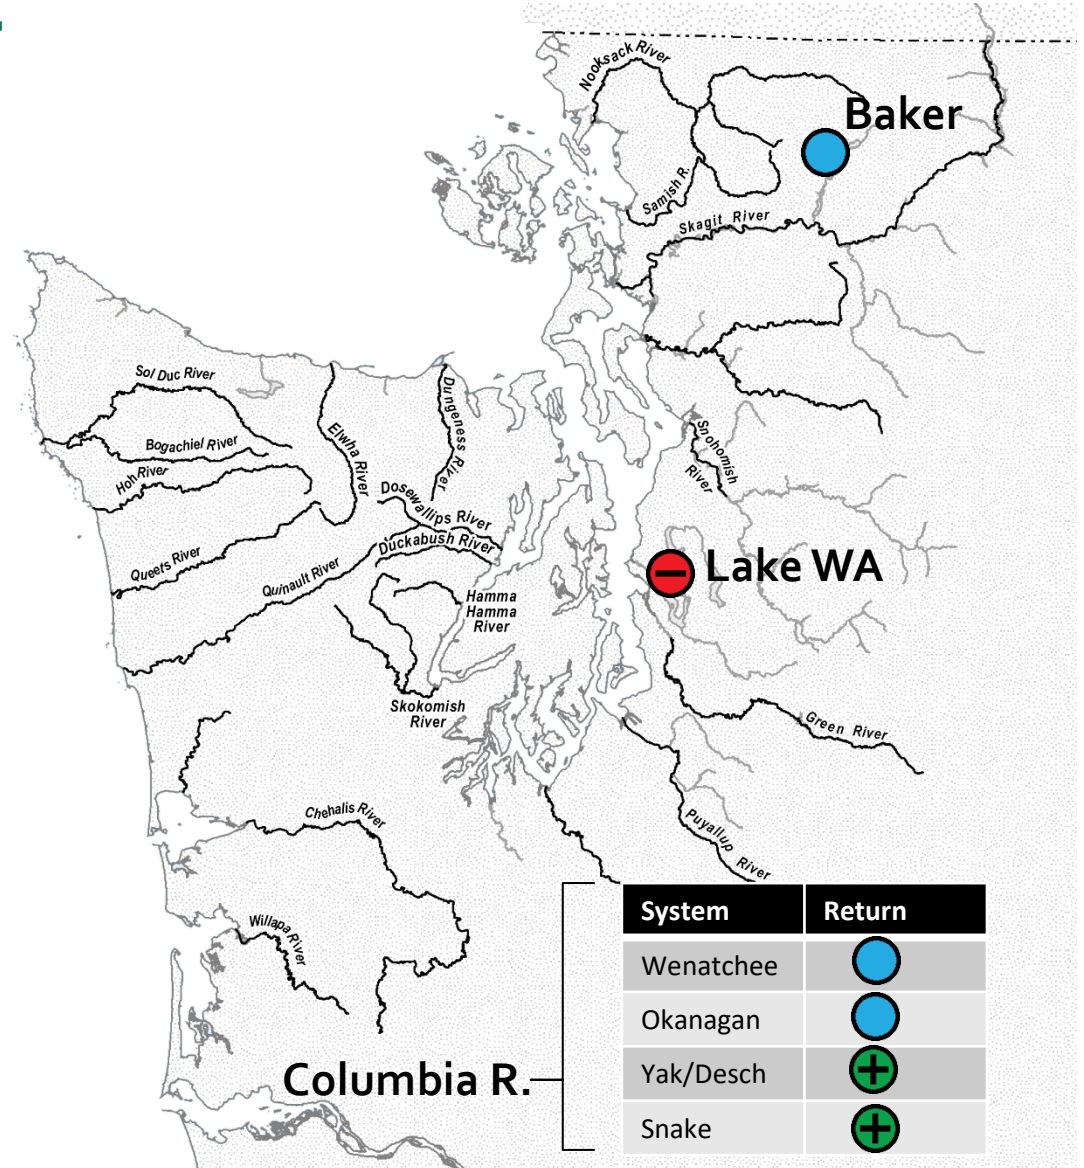

- Returns were **Good** and **Poor** in Puget Sound
- Total Columbia River return was **Neutral** with stock specific returns ranging from **Good** to **Poor**

# 2024 Sockeye Forecast

- Baker Lake – 56,750
- Lake WA – 19,574
- Columbia River – 401,700
  - Wenatchee – 97,000
  - Okanagan – 288,700
  - Yakima/Deschutes – 12,200
  - Snake River – 3,800

# Puget Sound Sockeye Forecasts

Lake WA ↓ 58% and Baker ↑ 57% over recent 10-year avg.

# Columbia Sockeye Forecasts

Lake Wenatchee **↑ 23%** and Okanogan **↑ 16%** over recent 10-year avg.

# 2024 Fraser River Sockeye Forecast

- 2020 was the lowest return on record for Fraser Sockeye
- Total Fraser Sockeye – **567k**
  - Early Stuart – 200k
  - Early Summer – 159k
  - Summer – 379k
  - Late – 29k
- Lowest forecast on record

# 2023 Spring/Summer Chinook Returns

## Relative to Recent 10yr Avg. Run Size

-  > 125%
-  75-125%
-  < 75%

- Lower Spring – 75,407 (97%)
  - Cowlitz, Kalama, Lewis, Sandy, Willamette, and Select Areas
- Upriver Spring – 141,179 (94%)
  - Upstream of Bonneville Dam
- Summer – 54,722 (77%)
  - Upper Columbia

# 2024 Spring/Summer Chinook Forecasts

- Lower Spring – 84,600 (107%)
- Upriver Spring – 121,000 (79%)
  - Snake River wild forecast is 8% of the total upriver run
- Summer – 53,000 (76%)

# 2023 Fall Chinook Returns

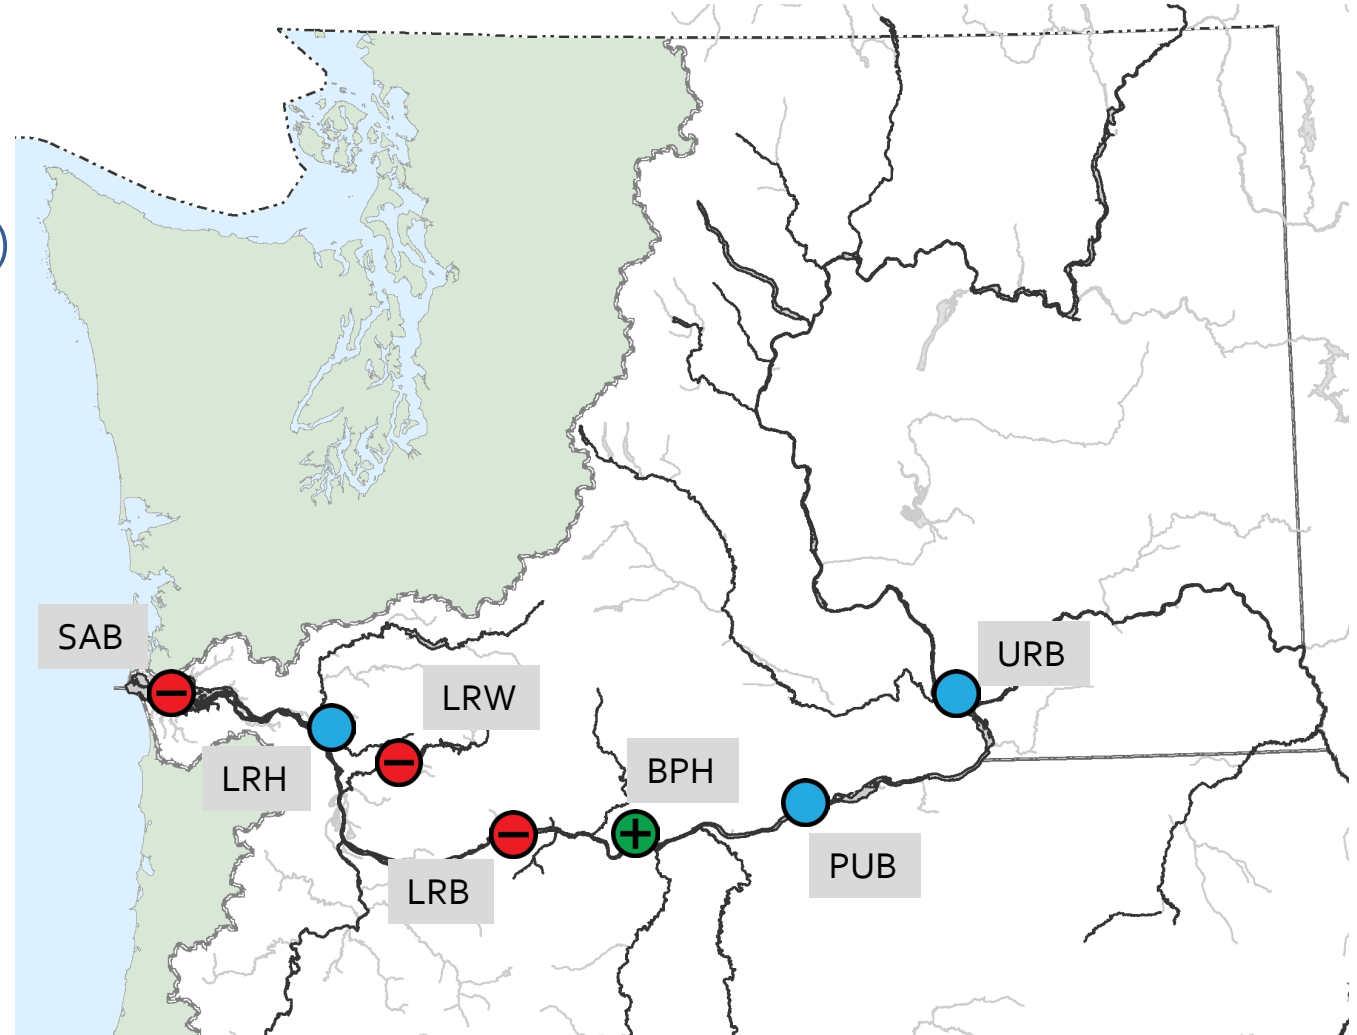

## Tule stock

- LRH (Lower River Hatchery) – 87,127 (106%)
- BPH (Bonneville Pool Hatchery) – 198,864 (218%)

## Bright Stock

- SAB (Select Area Bright) – 1,742 (24%)
- LRW (Lower River Wild) – 11,415 (60%)
- LRB (Lower River Bright) – 3,160 (52%)
- PUB (Pool Upriver Bright) – 78,938 (83%)
- URB (Upriver Bright) – 338,991 (82%)

**Total Fall – 720,237 (99%)**

# 2024 Fall Chinook Forecasts

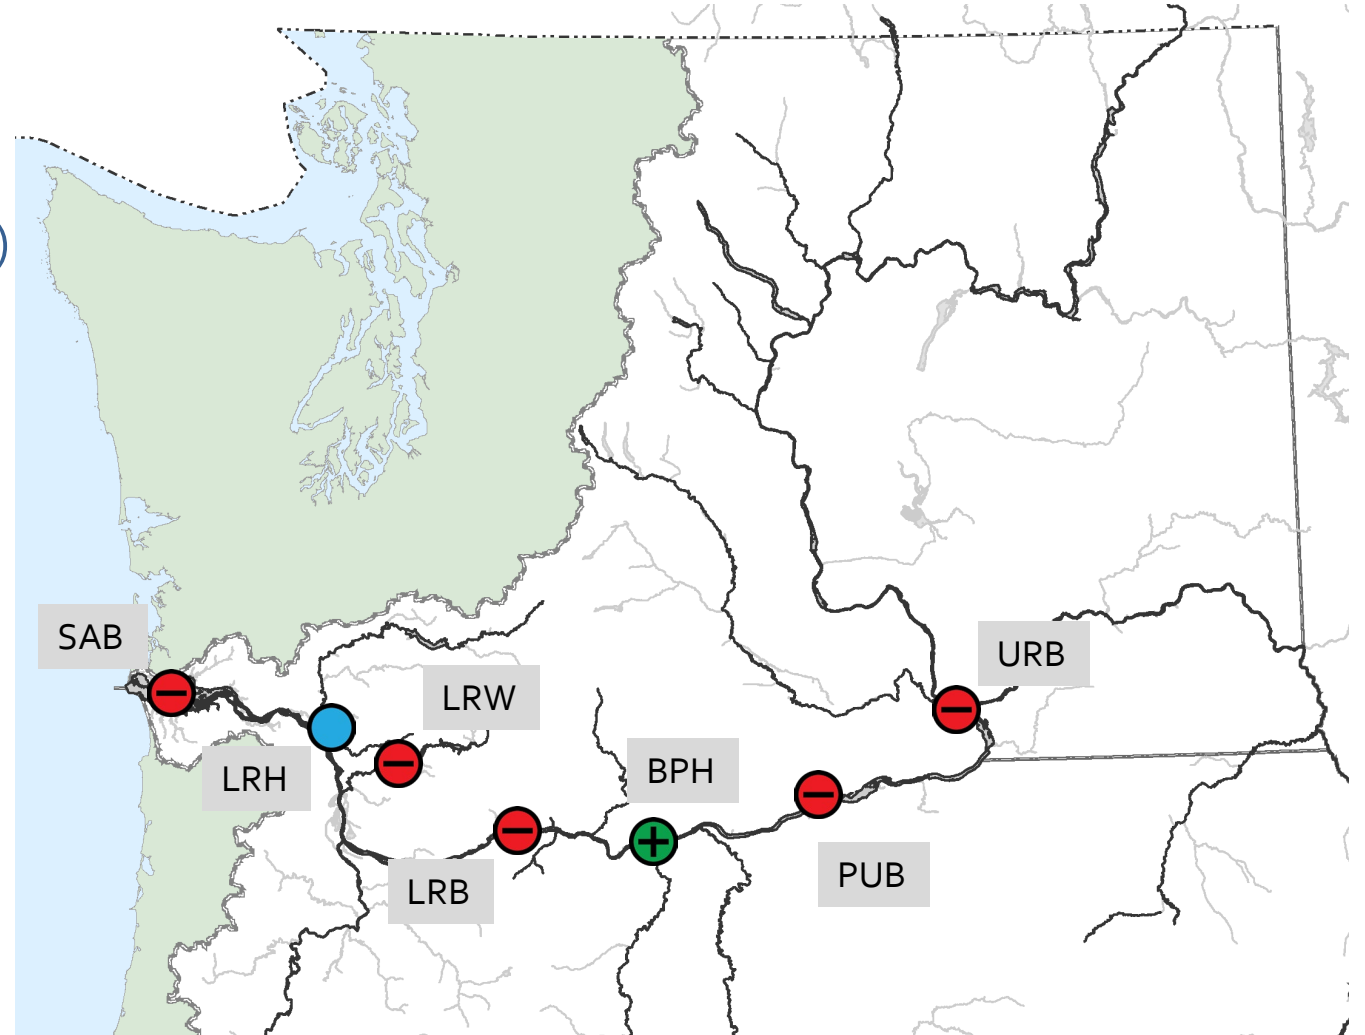

## Tule stock

- LRH (Lower River Hatchery) – 85,500 (106%)
- BPH (Bonneville Pool Hatchery) – 129,800 (127%)

## Bright Stock

- SAB (Select Area Bright) – 300 (6%)
- LRW (Lower River Wild) – 10,500 (60%)
- LRB (Lower River Bright) – 2,400 (38%)
- PUB (Pool Upriver Bright) – 61,000 (74%)
- URB (Upriver Bright) – 258,300 (70%)

**Total Fall – 547,800 (81%)**

# Lower Columbia River Tule Exploitation Rate (ER) Matrix

## LRH Run Size

<24,000

24,000 – 31,000

31,000 – 67,000

>**67,000**

## LCR Tule ER

30%

35%

38%

**41%**

- Incorporates revised abundance tiers during most recent 'Periodic Review' to reflect reduction in hatchery production.
- Expected to be managed to a limit of 41% ER for ocean and in-river fisheries combined.

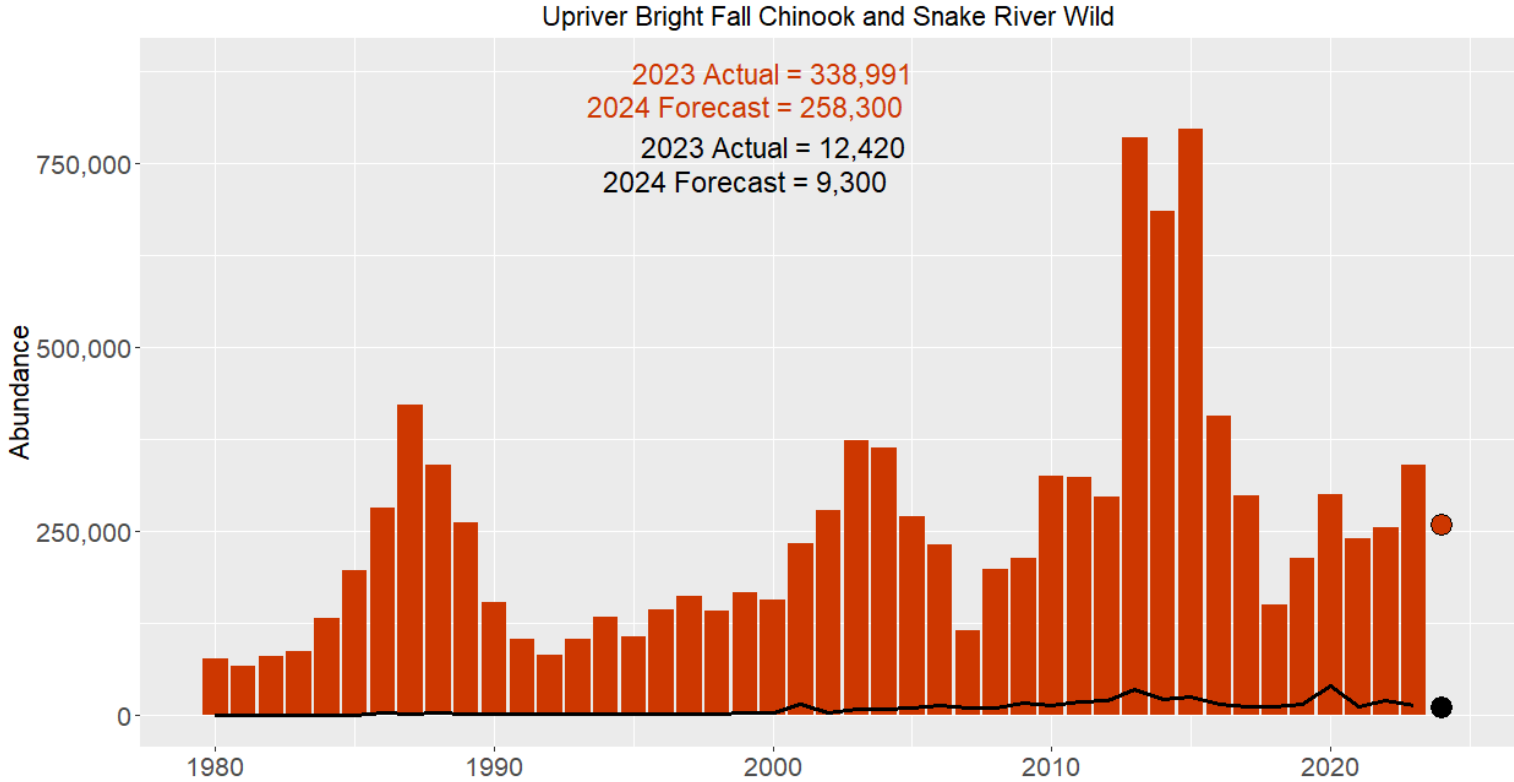

# URB Harvest Rate Schedule

| <u>URB Run Size</u> | <u>NT Harvest Rate</u> |
|---------------------|------------------------|
| <60,000             | 1.5%                   |
| 60,000-119,999      | 4%                     |
| 120,000-200,000     | 8.25%                  |
| <b>&gt;200,000</b>  | <b>15%</b>             |

| <u>Snake River Wild Run Size</u> | <u>NT Harvest Rate</u> |
|----------------------------------|------------------------|
| <1,000                           | 1.5%                   |
| 1,000-1,999                      | 4%                     |
| 2,000-4,999                      | 8.25%                  |
| 5,000-5,999                      | 8.25%                  |
| 6,000-7,999                      | 11%                    |
| <b>8,000+</b>                    | <b>15%</b>             |

- The most constraining of the URB and Snake River Wild run sizes determine the in-river non-treaty harvest rate within the *U.S. v OR* 2018-2027 Management Agreement.
  - URB/SRW expected to be managed to a limit of 15% harvest rate for in-river fisheries.

# Coho

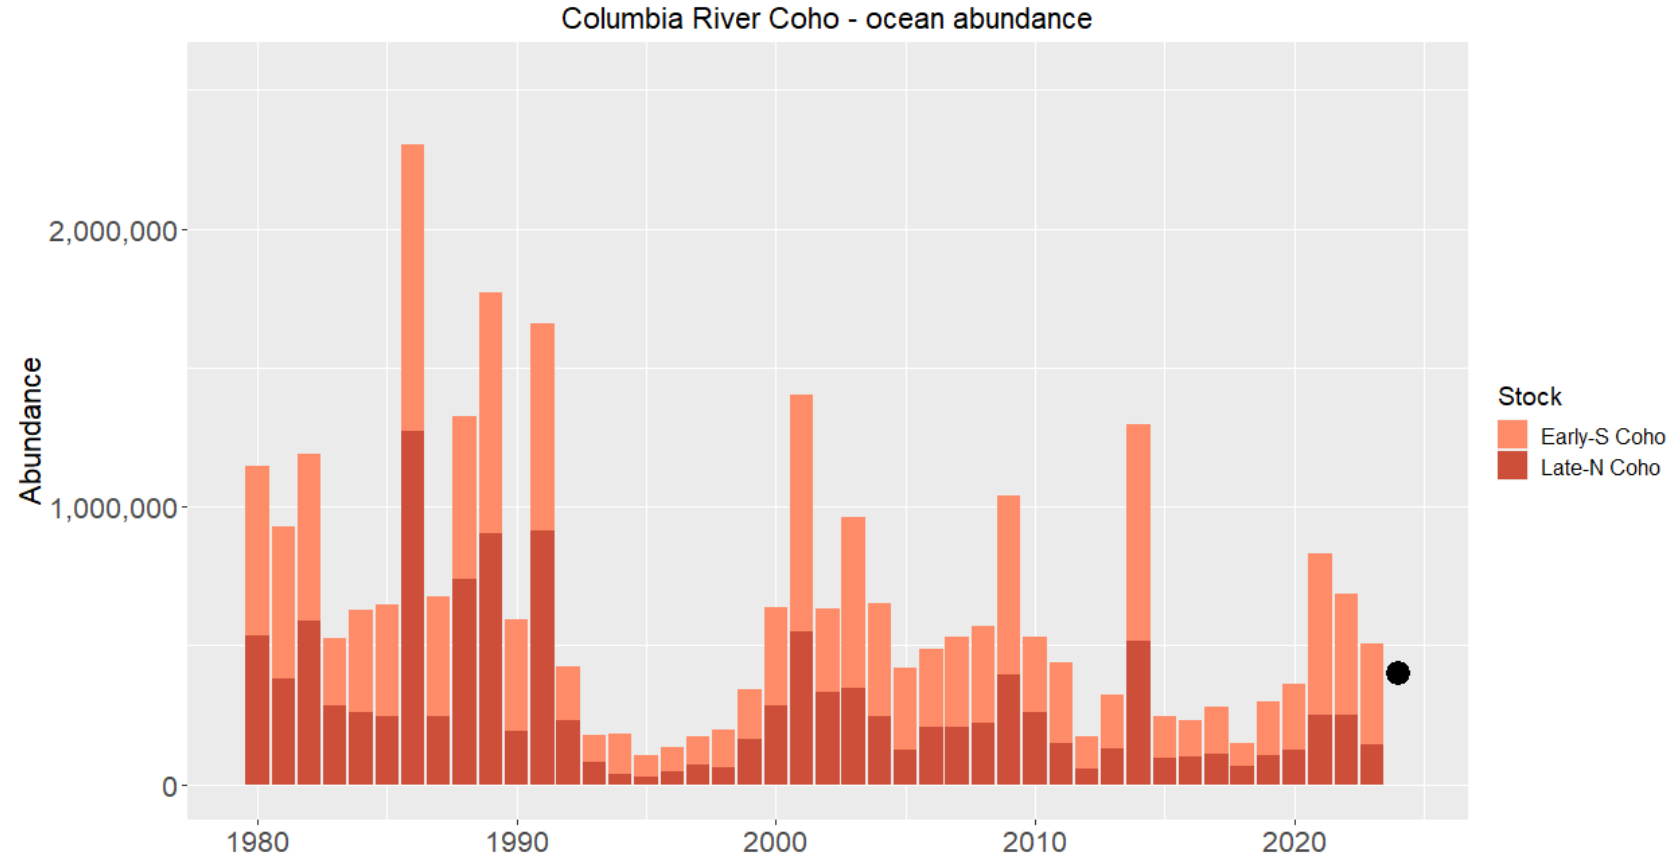

Thomas Kline

# 2023 Coho Returns (ocean abundance\*)

Green; 3-yr average return rates. Puyallup; climate relationship for age 3, sibling relationship for age 4, 5-yr average return per spawner for age 5. Nisqually; smolt to adult return average since 2015 (5-yr avg for age 3, 4-yr avg for age 4, 3-yr avg for age 5). Hatchery: Variety of recent year average return rates or sibling relationships. |
|   | Hatchery | 99.9 | 100.7 | 78.8 | 90.3 | 90.4 | 90.5 |  |
| Hood Canal  | Natural  | 1.2  | 4.6   | 5.7  | 5.4  | 3.2  | 4.3  | Includes hatchery strays to spawning grounds in Skokomish River. Proportioned using Hood Canal terminal run reconstruction-based relative contribution of the individual management units for 2019-2023 return years. Area 12B returns derived by applying an average proportion of natural origin recruits returning to area 12B for 2019-2023.   |
|   | Hatchery | 66.0 | 67.6  | 64.1 | 51.9 | 53.6 | 56.3 |  |
| Strait of Juan de Fuca Including Dungeness spring run | Natural  | 8.3  | 5.0   | 5.5  | 5.0  | 3.7  | 4.3  | Natural and hatchery. Elwha estimated by all year average smolt to adult return rate, natural component based on 13-yr average hatchery/wild proportion. Dungeness natural and hatchery estimated using all-year and 3-yr average smolt to adult return rates.   |

a/ Since 2005, the upriver spring Chinook run includes Snake River summer Chinook.

b/ Since 2005, the upriver summer Chinook run includes only upper Columbia summer Chinook, and not Snake River summer Chinook.

c/ Expected spawning escapement without fishing.

d/ Unless otherwise noted, Puget Sounds forecasts are in units of terminal run size.

e/ Includes a mixture of runsize types including escapement without fishing and terminal run. 2024 values are terminal runsize.
