

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Additional Comments:

The public Forests need a rounded animal structure to keep one species from overpopulating. The Wolf can help with that problem they are the top of the food chain! Let the cattlemen take care of their own cutters instead of living off public funds.

Additional Comments: IT IS RARE TO GET A CHANCE TO HELP A ENDANGERED SPECIES.
PLEASE DON'T LET THIS OPPORTUNITY SLIP BY. ACT NOW!

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

NOT TO KILL THEM (WILD AS WELL AS DOMESTICATED)

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: The wolf indeed is an important & beautiful part of our ecosystem. Like all living creatures, they seek food when hungry and should not be treated like evil predators. The woods in the fall, the most colorful time of the year, are full of human predators to the detriment of non-hunters who, like the wolf, cannot feel safe nor enjoy that special time of year. The above plan should help the wolf thrive in its natural habitat.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Ms. Patricia A. Weaver
17022 NE 104th Ct.
Redmond, WA 98052

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: The hunting of wolves will eventually lead to overpopulation of other species, (their prey) and inevitably lead to another overpopulation and upset the eco system completely.

Dear WA Dept of Fish and Wildlife,

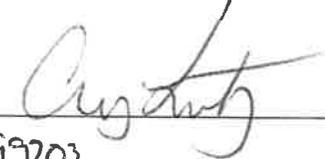

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use-of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Name (printed) Mitch & Anita Andreassen Signature

Additional Comments: I am a Washington State deer and elk hunter of many years, but also support the presence back of wolves in our State's diverse ecosystems. I believe wolves are an important missing piece in the health of our State's wildlife habitat. I also had a 'wolf visit' my tent in Alaska and it is my #1 favorite wildlife experience in my 50 years of age, and would love that possibility here in Washington State for myself, my children, and others. ☆

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

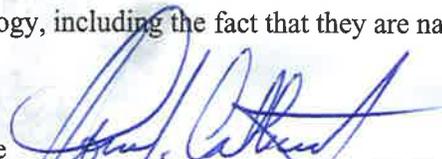

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Name (printed) Charles P. Fisk Signature Charles P. Fisk
Address 1854 W. Bridge Ave City Spokane Zip 99201-1815
Email Don't have at this time Phone 509-327-8328

Additional Comments: I have had personal experiences of wolf sightings (in Alaska) and wolf howling (in Algonquin Provincial Park, Ontario) and have thrilled at my contacts. Please make their survival more certain by taking the above actions. Urgent efforts are necessary. Thank you for taking this input. C.P.F.

Additional Comments:

I just read an interesting article about how wolves help the health of their ecosystem by instilling caution + fear in ungulate animals. That fear helps prevent grazers from over using riparian areas and overgrazing.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: I was disheartened when Idaho issued hunting licenses for hunting wolves this summer. I was also disheartened that the first kill was highlighted in a featured article in the Spokesman Review. Yet when the hunter was threatened and harassed by area residents who were angry — that was even more upsetting. How do we dialogue without getting personal, and without getting violent? Thanks for this opportunity to be heard. AJH

Additional Comments:

Since provision has been made for any killing of livestock by wolves, it is hard to understand the intense response by those who want to get rid of them. I strongly support the points raised above.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: Wolves are an invaluable species for wild-life balance. They are noble animals with strong family ties, a high intelligence, and feelings like we have. They deserve to live here too- just the same as we do.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.

Additional Comments: Everyday I hear about more+more wild places being destroyed and developed and wild animals being displaced and destroyed for the "benefit of mankind". We must begin to protect and respect the wild animal species as it really is critical to the ultimate survival of the ecosystem, on the planet, and, therefore, mankind as well.

JH

Additional Comments: This is our chance to have wolves join us again in WA state.

They aren't dangerous to humans. The scare tactics by ranchers are a joke; the math doesn't add up. If 100 cattle were killed annually & their market value was \$1,000 each, it would only cost ranchers \$100,000. I'm sure 100,000 people who care about wolves would pay \$1/year to aid in wolf recovery. This isn't as dangerous & as controversial as the effort to bring back grizzlies. This should be a slam dunk if we can eliminate the scare tactics. I support ranchers, just not the politicians that support them.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Name (printed) Liam Sanchez

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.

Additional Comments: I

I don't understand the proposed preferred plan described in the "Seattle Times" 10/19/09 that compensates the loss of livestock to wolves differently for the 100 acre sites vs. the smaller sites - in favor of the larger ranches. I have read that wild dogs kill more cattle than wolves - how do you tell the difference?

Additional Comments: Anderson Cooper met a biologist in Yellowstone. Since the wolf return the elk overpopulation is managed: less elk = return of willows. In creeks: return of willows = return of rare song birds who depend on the willows for survival. Mother nature knows what she's doing. Nat. Geographic article on "Dale Royale" noted diseased + starving moose & over browsing, awful conditions UNTIL wolves crossed the ice. They killed the old, young, starving + diseased. Results - stronger moose herd & return of vegetation. Another win/win event. AJH

Additional Comments:

Wolves are very necessary parts of functioning ecosystems.

When wolves are removed coyotes take over their turf. Reintroduction of wolves should reduce the number of coyotes which ~~are~~ have now inhabited much of the country where they were not originally present.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: I recently spent time in Yellowstone
studying wolves. These magnificent, intelligent
animals are no threat to people and their
actions provide food for 12 other species.

No species should ever be hunted to extinction
again, especially not highly evolved mammals
that are part of the ecosystem in ways we are

Still in covering.

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Additional Comments:

People seem to think we don't need predators,
and that the decline in elk is caused by the wolf.
No one seems to realize that the loss of habitat,
disease, & overgrazing by cattle on leased government
land is also contributing factors!

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Sincerely,

Additional Comments:

I hope in my heart and soul that mutual efforts to understand each others' needs (pro-wolf, anti-wolf protection) can be worked out, without the "adversarial enemy" attitudes, crushing their way to non-resolution. This can be done if we honor and support each others' positions. It won't work if we don't find a way to Pledge to protect our magnificent resource, the North American Wolf.

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Dear WA Dept of Fish and Wildlife,

I am very pleased that the remarkable and endangered Gray Wolf is returning naturally to Washington State. I support a wolf management plan that will usher in long-term recovery of the species and allow future generations of Washingtonians to see the magnificent Gray Wolf in its native habitat.

I urge the Dept. to:

- Provide for legally binding and enforceable protections to prevent another extinction of wolves from Washington.
- Reject arbitrary goals (e.g. 15 breeding pairs) in favor of scientifically-based goals that account for factors such as illegal poaching, genetic isolation, disease and other potential mortality events.
- Implement the moving or translocation of wolves to appropriate wilderness habitat within the state & emphasize non-lethal techniques for management such as the use of guard animals and predator deterrent fencing.
- Ensure that delisting is not considered until genetic diversity, genetic connectivity and genetically-viable population goals have been met for at least five years.
- Invest in programs that educate Washington citizens about wolf ecology, including the fact that they are native to our great state and play a beneficial role overall in our ecosystem.

Additional Comments: We must remember that wolves were here long before we were & ensure that their role in the cycle of life is protected. While a rancher may from time to time lose a calf or sheep, we mustn't forget that wolves actually help other segments of the population - thinning out diseased deer populations, for example, or preying on smaller game like rabbits which can adversely affect agriculturalists.
