Subject: Summit Lake year around fishing

I opposed the opening of Summit Lake to year round fishing. The impact of year round fishing on our drinking water supply has not been addressed. We, the residents of Summit Lake, drink the water as it is our only water source. In the very minimum, an environmental impact statement should be conducted. We have fishing boats that come routinely into our lake and dump their bilge water into our lake. If they are allowed to do this year round, we may not be able to drink our water and become sick from contaminated water. We have lived here for 15 years. During the winter months, the lake replenishes itself and cleanses itself. The wildlife also come back to the water and are undisturbed. We do not need fishermen here upsetting the ecosystem and threatening our life sustaining precious water.
