SEPA ENVIRONMENTAL CHECKLIST ADDENDUM

Name of Proposal: MCKERNAN HATCHERY POND WALL REPAIR

Description of Proposal: The rearing pond at the McKernan Hatchery, which is an in-stream structure on Weaver Creek, needs to have an eroded pond wall repaired. The rearing pond measures approximately 50' X 350'. The erosion has caused a portion of the road to lose material from below the pavement. In addition, the posts that support the netting to minimize bird predation are falling over. The portion that needs to be repaired is approximately 50' in length and 4-8' in width. The project proposes to make the repairs using ecology blocks and back filling. This will secure the pond wall, the road, and the bird netting support posts.

Proponent: Washington Department of Fish and Wildlife, Fish Program, 600 Capitol Way, N., Olympia, WA 98501-1091. Attention: Catie Mains.

Location of Proposal, including street, if any: McKernan Hatchery, West 411 Deyette Road, Shelton, Washington, Mason County; Section 16, Township 21 North, Range 04 West WM

Lead Agency: Washington Department of Fish and Wildlife

The lead agency is providing updated information on this project which may be of interest to other agencies or the public. The updated information provided below does not substantially change the analysis of significant impacts in the existing environmental checklist.

The above-referenced project was not completed last year. The original environmental checklist dated June 14, 1999 (issue date of DNS), should be modified to reflect the following corrections and additions:

A.6. Proposed timing or schedule change:

Two weeks to complete work, ideal time would be between April 1, 2000 and June 30, 2000

A.11. Brief description of proposal addition:

The original portion that needed repair has expanded. The area has been enlarged due to further erosion and instability along both sides of the pond wall. The proposed area measures approximately 500-700 feet in length and 4-8 feet in width. The repairs will be made with Ecology blocks, one high in most areas and up to three high where necessary.

B.1.e. Describe the purpose, type and approximate quantities of any filling or grading proposed change:

Approximately 500 yards total. There will only be minimal backfilling along the sections of repairs.

B.1.h. Proposed measures to reduce or control erosion, or other impacts to the earth proposed addition:

BMPs will be used for erosion control. Ecology blocks will be used. If appropriate, vegetated areas disturbed by construction activities will be revegetated, using bioengineering techniques.

B.3.a6. Discharges of waste material to surface waters proposed addition.

BMPs will be used for erosion and sediment control to help keep sediment from entering Weaver Creek. Proper disposal of construction debris will be on land to help prevent sediment from entering the stream channel or cause water quality degradation.

Based on the original environmental checklist and the updated information provided in this addendum, the lead agency has determined that a new threshold determination is not warranted. There is no comment period associated with this SEPA environmental checklist addendum.

Responsible Official: Peter Birch
