6d. Describe how you plan to construct each project element checked in 6c. Include specific construction methods and equipment to be used. [help]

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year flood plain.

Upstream and downstream from the site are a 30 foot wide channelization of Reecer Creek. A trackhoe will be used to restore the same 30 foot wide channelization of the site. Tree stumps will be emplaced to slow stream flow. At least one, and hopefully several, 30-50 radius bends in the channel will be constructed to slow stream flow. Willow trees will be planted to help stabilize stream banks, improve water temperature stabilization, and encourage return of native stream flora and fauna.

6e. What are the start and end dates for project construction? (month/year) [help]

If the project will be constructed in phases or stages, use JARPA Attachment D to list the start and end dates of each phase or stage.

Start date: October 2009

End date: December 2009

See JARPA Attachment D

6f. Describe the purpose of the work and why you want or need to perform it. [help]

Upstream erosion has filled the site with rock debris. Starting with the January 6, 2009 flood, the creek has jumped the banks at the site and is now filling our hay field with rock debris. We lost hay production on about 3 acres, 15 % of that field.

6g. Fair market value of the project, including materials, labor, machine rentals, etc. [help]

\$1,000.00

6h. Will any portion of the project receive federal funding? [help]

If yes, list each agency providing funds.

Activity causing impact (clear, dredge, fill, pile drive, etc.)	Waterbody name	Impact location ¹	Duration of impact ²	Amount of material to be placed in or removed from waterbody	Area (sq. ft. or linear ft.) of waterbody directly affected
Channelization repair	Reecer Ck	In Reecer Ck	1 day	0	100 yards

¹ Indicate whether the impact will occur in or adjacent to the waterbody. If adjacent, provide the distance between the impact and the waterbody and indicate whether the impact will occur within the 100-year flood plain.

² Indicate the time (in months or years, as appropriate) the waterbody will be measurably impacted by the work. Enter "permanent" if applicable.

8d. Have you prepared a mitigation plan to compensate for the project's adverse impacts to non-wetland waterbodies? [help]

If yes, submit the plan with the JARPA package. Stream flow is less than 1 gallon per minute. Flow will be piped around construction. A sediment barrier will be constructed.
