Subject: Nichols Teanaway River Streambank Stabilization – SEPA Review Comments

Dear Ms Jamison:

Thank you for reviewing the Nichols Teanaway River Streambank Stabilization project and the information on stormwater requirements.

Most all of the work area lies within the river channel itself. Mr. Nichol's consultant, Larry Lehman of Grette Associates, discussed Construction Stormwater Permit requirements with Ray Latham of WDOE. They concluded that a Construction Stormwater Permit would not be needed for the project as less than one acre of the project site is upland.

The HPA will include provisions requiring erosion control, isolation of the work area from the water of the Teanaway River and revegetation of disturbed areas.

Sincerely,

Brent D. Renfrow
District Habitat Biologist
