Re: Wooten Wildlife Area Campground Relocation, File # 14-020

Dear Ms. Wood:

Thank you for the opportunity to comment on the Determination of Nonsignificance regarding the proposal to remove two existing campgrounds from the floodplain and return the floodplain to a more riparian state while constructing three new campgrounds to replace the two to be decommissioned (Proponent-Washington Department of Fish and Wildlife). The Department of Ecology has reviewed the documents and submits the following comments:

Air Quality Program

The applicant must evaluate alternatives to burning natural vegetation after it has been cleared from the land. If the applicant plans to burn any vegetation after it has been cleared, please call Kary Peterson at (509) 329-3523 prior to burning. If it is determined that burning is allowed, an Ecology burn permit is required. In Urban Growth Areas (UGAs), burning vegetation after it's been cleared is not allowed. Burning construction or demolition materials is not allowed. All non-vegetative debris must be disposed in a non-thermal, legal manner.

You can find more information about outdoor burning, UGAs, burn permit applications, and more by visiting Ecology's Outdoor Burning website at:

http://www.ecy.wa.gov/programs/air/outdoor_woodsmoke/residentialburn.htm or by calling Kary Peterson at (509) 329-3523.

Shorelands and Environmental Assistance Program-Wetlands

Wetlands may be present on the project site, but it is difficult to determine based on aerial photos. A wetland reconnaissance should be performed by a qualified wetland specialist or biologist to determine if wetlands are present. This is not the same as a wetland delineation, but rather a visual observation for wetland characteristics. If potential wetlands are observed, a delineation, mitigation planning, and permitting will be required. Contact David Moore at (509) 329-3474 for more information.

Shorelands and Environmental Assistance Program-Floodplains

If any part of the proposed project involves development within the Special Flood Hazard Area, a Floodplain Development Permit must be issued by the Columbia County. Please contact the Columbia County Planning and Building Department at (509) 382-4676 for information about this permit.

Water Quality Program

Proper erosion and sediment control practices must be used on the construction site and adjacent areas to prevent upland sediments from entering surface water. Local stormwater ordinances will provide specific requirements. Also refer to the Stormwater Management Manual for Eastern Washington (http://www.ecy.wa.gov/programs/wq/stormwater/eastern_manual/manual.html). All ground disturbed by construction activities must be stabilized. When appropriate, use native vegetation typical of the site.

Any operation which would generate a waste discharge or have the potential to impact the quality of state waters, must receive specific prior authorization from the Department of Ecology as provided under Chapter 90.48 RCW, Chapter 173-216 WAC, Chapter 173-220 WAC, Chapter 173-200 WAC and Chapter 173-201A WAC.

Routine inspections and maintenance of all erosion and sediment control Best Management Practices (BMPs) are recommended both during and after development of the site.

A Stormwater Pollution Prevention Plan for the project site may be required and should be developed by a qualified person(s). Erosion and sediment control measures in the plan must be implemented prior to any clearing, grading, or construction. These control measures must be effective to prevent soil from being carried into surface water by stormwater runoff. Sand, silt, and soil can damage aquatic habitat and are considered pollutants. The plan must be upgraded as necessary during the construction period.

Proper disposal of construction debris must be in such a manner that debris cannot enter the natural stormwater drainage system or cause water quality degradation of surface waters. Dumpsters and refuse collection containers shall be durable, corrosion resistant, nonabsorbent, nonleaking, and have close fitting covers. If spillage or leakage does occur, the waste shall be picked up immediately and returned to the container and the area properly cleaned.

The operator of a construction site that disturbs one acre or more of total land area, and which has or will have a discharge of stormwater to a surface water or to a storm sewer, must apply for coverage under Department of Ecology's Construction Stormwater General Permit.

Owners of sites where less than one acre of total land area will be disturbed must also apply if the construction activity is part of a larger plan of development or sale in which more than one acre will eventually be disturbed. Discharge of stormwater from such sites without a permit is illegal and subject to enforcement action by the Department of Ecology.

Ms. Lisa Wood

Page 3

Application should be made at least 60 days prior to commencement of construction activities. A permit application and related documents are available online at: <http://www.ecy.wa.gov/programs/wq/stormwater/construction>; or by contacting the Water Quality program, Department of Ecology, P.O. Box 47600, Olympia, WA 98504-7600; (360) 407-6401.

State Environmental Policy Act (SEPA)

Ecology's comments are based upon the information submitted for review. As such, they do not constitute an exhaustive list of the various authorizations that must be obtained or legal requirements that must be fulfilled in order to carry out the proposed action.

Sincerely,
Cindy Anderson for:
