

Good morning all,

I just spoke with Mary Ann Abbott from the Department of Ecology and the recommendation for soil sampling is a canned response whenever projects fall within the plume area. She indicated that this is only a recommendation if soil will be removed/modified and should not hold up the permit. Thus, as far as Fish and Wildlife is concerned there will not be significant soil migration and the permit will be issued without any provisions. If anyone has questions please feel free to contact me.

Thanks,

Tara Livingood
