

Describe spawning habitat:

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat: The first 26 meters is in a 1 meter wide channel that is mud-bottomed and shallow. Above this section, the wetted width ranges between 4 and 6 meters, the substrate is very mucky and there is good brushy cover. There is a large amount of water parsley present as well as some skunk cabbage.

Describe unaccessible habitat:

Wetland type: Bog Marsh Scrub-shrub Forested

Describe:

Flooding potential: Low Medium High

Describe: The mainstem may backwater into this small site and the wetted area may be enlarged during a winter with normal to above normal precipitation.

FISH INFORMATION

Site entry condition: Poor Fair Good

Describe: It is slow-moving and pooled at the entry area, however the lower section of the site is prone to dry up during low flow periods.

Coho access and use: Juvenile Unknown None Poor Fair Good
Adult Unknown None Poor Fair Good

Describe: This site is accessible to juveniles, however none were observed during the survey.

Other species acces and use: Chum Pink Sockeye Chinook Trout

Describe: This site can be accessed by trout also but none were observed.

ENHANCEMENT OPPORTUNITIES: None

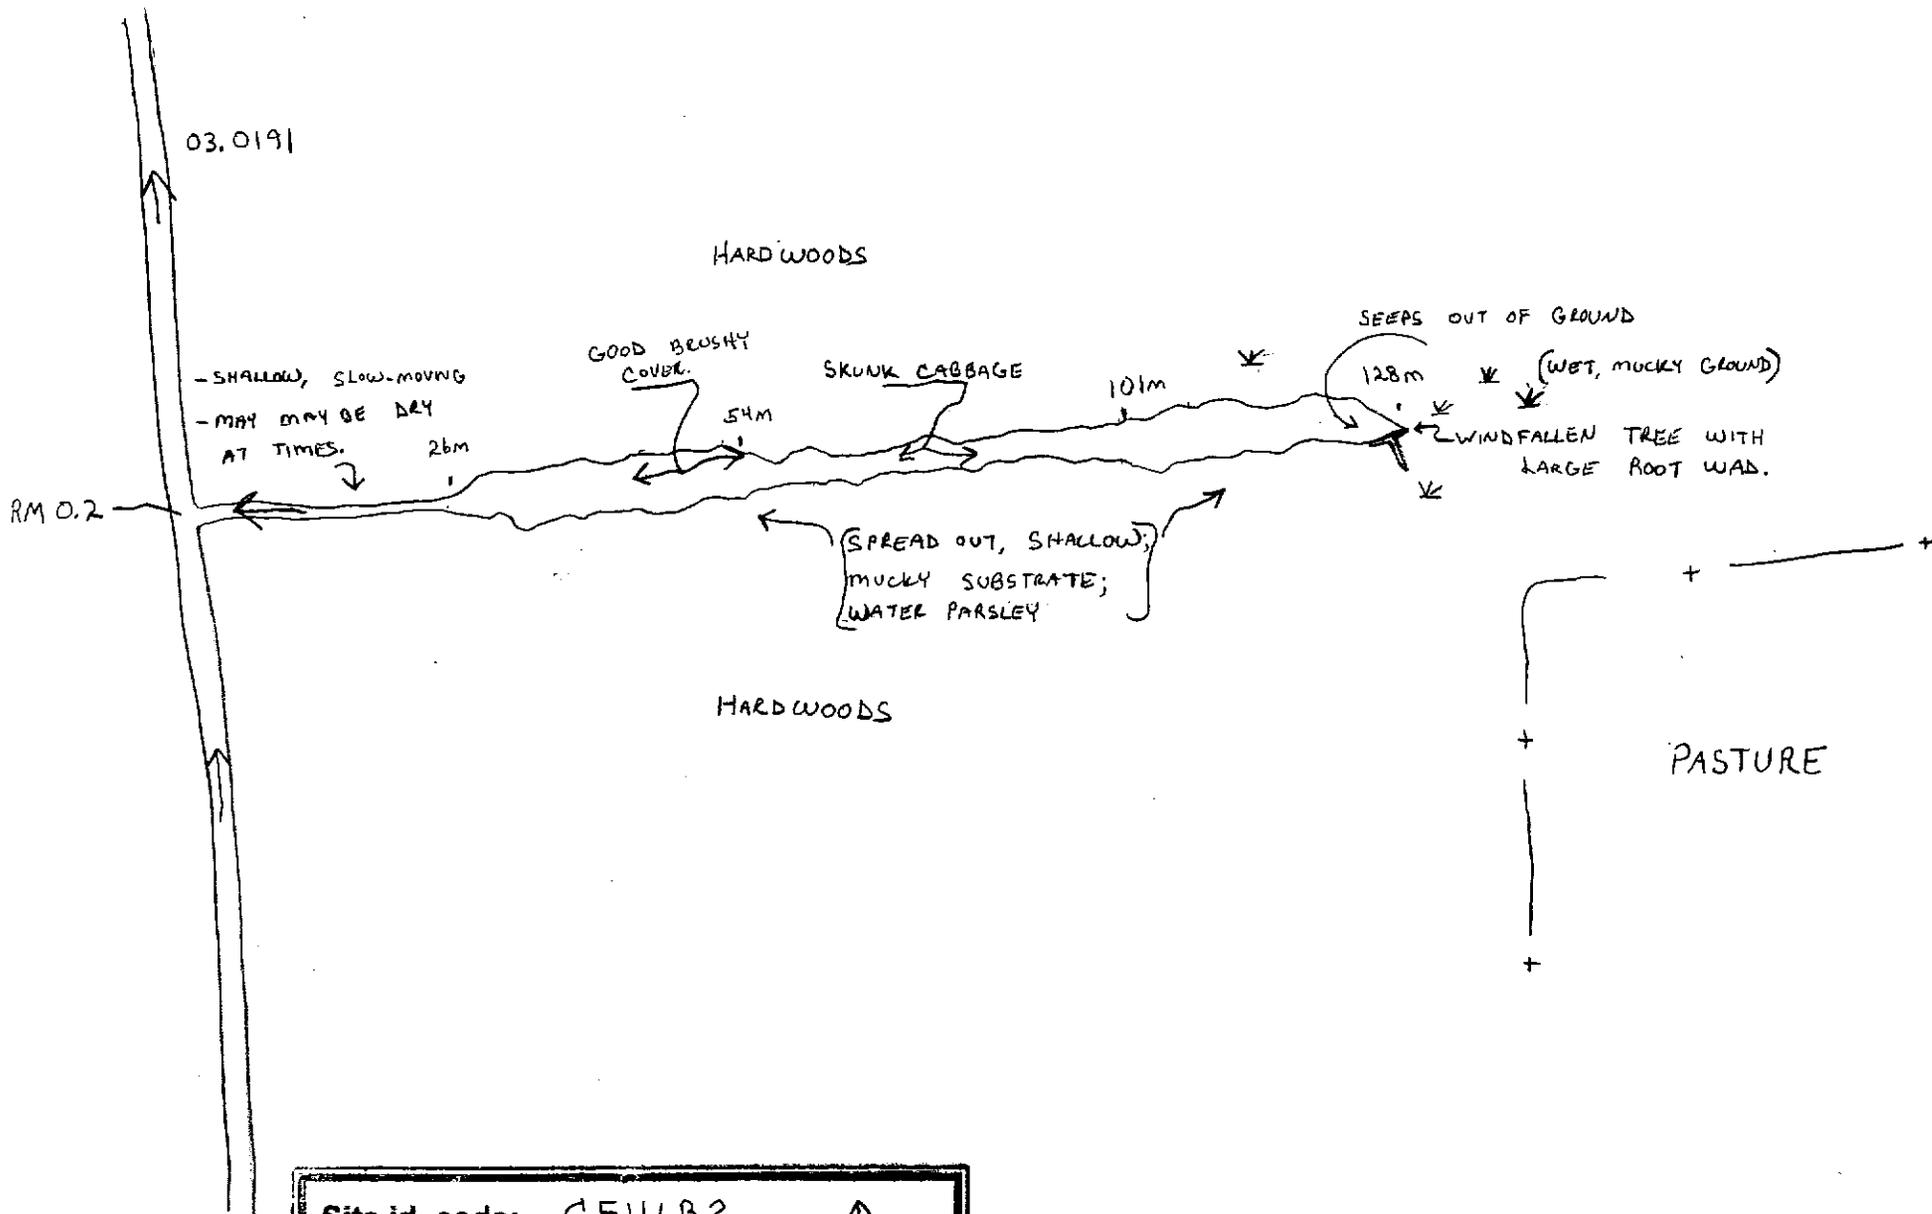

Project type:

Equipment access:

ADDITIONAL COMMENTS: The survey was ended at an area where water was slowly seeping out from under a root wad and from the surrounding wet and mucky ground.
