COMMENTS & RECOMMENDATIONS: ED-115L-03 is a small tributary that originates on an intermediate terrace above the left bank of Thunder Creek. The drainage has been logged and the channel is full of woody debris in places. ED-115L-03 is overtopped by salmonberry along most of its length. This currently provides good shade and cover.

ED-115L-03 appears to have good potential for the use of controls to pool water. The entrance conditions are very nice.
