

Spawning habitat conditions: None Poor Fair Good Excellent

Describe spawning habitat:

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat: The initial 97 meters is the upper end of a beaver pond/swamp complex that has skunk cabbage and water parsley present. The substrate is mud and there is a good amount of LWD present. Upstream of this point, the channel ranges from 2 meters to 4 meters, there is good brushy cover and it has a mud substrate. There are several small beaver dams and pools present as well as skunk cabbage and canary grass. The habitat is either ponded, pooled or slow-moving.

Describe unaccessible habitat:

Wetland type: Bog Marsh Scrub-shrub Forested

Describe:

Flooding potential: Low Medium High

Describe: Trib 05.0139 is 1.2 meters in width at this point and flows into the same beaver pond/swamp complex as does this site and there is no threat of flooding.

FISH INFORMATION

Site entry condition: Poor Fair Good

Describe: This site flows into a large beaver pond/swamp complex which allows easy access in and out of the site.

Coho access and use: Juvenile Unknown None Poor Fair Good
Adult Unknown None Poor Fair Good

Describe: There is excellent rearing habitat potential for coho salmon present, however there is a private dam that is a complete barrier located on trib 05.0139 downstream from this site.

Other species access and use: Chum Pink Sockeye Chinook Trout

Describe: Trout use is likely.

ENHANCEMENT OPPORTUNITIES: Remove the private dam (SH34) that is located on trib 05.0139 to allow coho to access this site.

Project type:

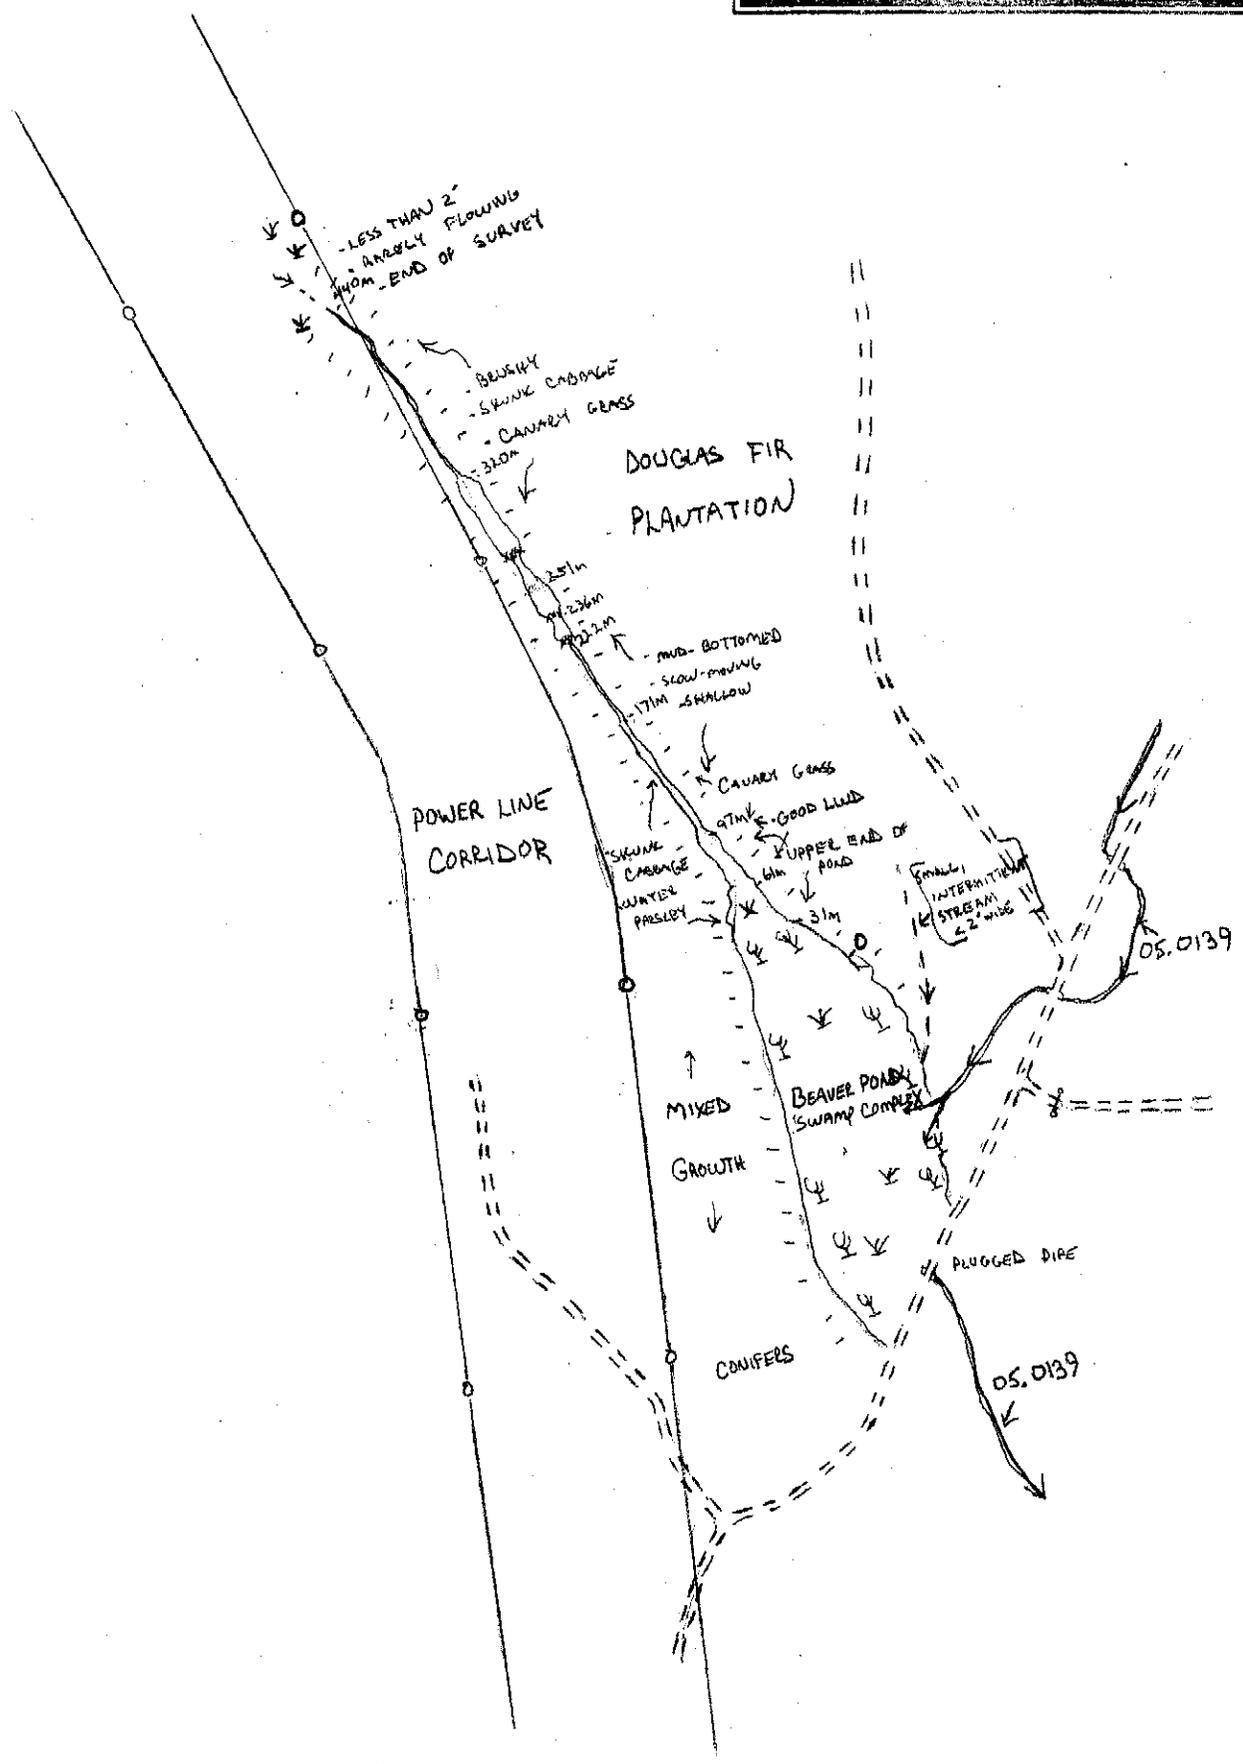

Equipment access:

ADDITIONAL COMMENTS: The survey ended in the power line corridor as there was a trickle of water flowing through cattails, rush and brush.
