

Spawning habitat conditions:  None  Poor  Fair  Good  Excellent

Describe spawning habitat:

Rearing habitat conditions:  None  Poor  Fair  Good  Excellent

Describe pond and other rearing habitat: The initial 21m is backwatered and pooled from the mainstem and from a log that spans across the channel. From 21 meters to the end of the survey at 230 meters, the stream is slow-moving and pooled with a mucky substrate that is coated with algae in places. At 130 meters is a dry channel that enters on the left bank. This may be inundated during high flow periods and extend the habitat for this site.

Describe inaccessible habitat:

Wetland type:  Bog  Marsh  Scrub-shrub  Forested

Describe:

Flooding potential:  Low  Medium  High

Describe: This site sits on a low bench which appears to have been flooded in the past as is evidenced by the large canary grass-filled swale on the back side of this bench.

#### FISH INFORMATION

Site entry condition:  Poor  Fair  Good

Describe: There is a large backwatered pool at the entry.

Coho access and use: Juvenile  Unknown  None  Poor  Fair  Good  
Adult  Unknown  None  Poor  Fair  Good

Describe: There were several juvenile coho observed during the survey.

Other species access and use:  Chum  Pink  Sockeye  Chinook  Trout

Describe: This site is accessible to trout also.

ENHANCEMENT OPPORTUNITIES: None

Project type:

Equipment access:

ADDITIONAL COMMENTS: The survey was ended as the channel became dry. There is a small foot trail network that is located on this lower bench.
