

Total existing habitat area (est.): 20 m²

Spawning area: 0 m²

Impounded area: 0 m²

Other rearing area: 20 m²

Spawning Habitat conditions: None Poor Fair Good Excellent

Describe spawning habitat:

- There is some gravel recruitment from the tributary.
- There is a small amount of gravel in the lower end of the channel.
- Gravel amount would be conducive to cutthroat trout spawning.

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat:

- There is cover of small woody debris and brush.
- The riparian area is an alder flat.
- Springs from the left bank wall contributed to the flow.
- Some water in the flat, flows away from the channel.
- This channel is primarily braided and may be too shallow for utilization during normal flows.
- This small channel may offer limited refuge if it is not influenced by the main river during high flows.

Describe unaccessible habitat:

Describe wetland: Bog Marsh Scrub-shrub Wetland Forested Wetland

- The location of this channel is an alder flat that has an abundance of brush.

Flooding potential: Low Medium High

- The lower accessible channel may be inundated during high flow periods.

Fish Information:

Site entry condition to (S. FK. Sol Duc River 20.0354): Poor Fair Good

- Open egress.

Coho access and use:

Juvenile- Unknown None Poor Fair Good

Adult- Unknown None Poor Fair Good

Other species access and use: Chum Pink Sockeye Chinook Trout

- Cutthroat trout may utilize this channel if flow is not limiting.

Habitat Improvements:

Enhancement opportunities:

- None recommended.
