

Spawning habitat conditions: None Poor Fair Good Excellent

Describe spawning habitat: A small amount of spawning gravel is present near 200 meters on a riffle, most of the substrate is cobble sized.

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat: The site is dominated by large pools with thick brush on the banks and an old growth overstory. Flow decreases the further upstream you go, terminating in a scrub-shrub wetland near the head end. Site was nearly dry when observed in August.

Describe unaccessible habitat:

Wetland type: Bog Marsh Scrub-shrub Forested

Describe:

Flooding potential: Low Medium High

Describe: Site appears to be relatively risk free.

FISH INFORMATION

Site entry condition: Poor Fair Good

Describe: Fish have easy access to the site when flows are moderate, access is difficult during low flows due to a cascade at the mouth.

Coho access and use: Juvenile Unknown None Poor Fair Good
Adult Unknown None Poor Fair Good

Describe: No Juveniles were observed on the day of the survey, two adults were observed near the mouth but no redds were observed.

Other species access and use: Chum Pink Sockeye Chinook Trout

Describe: Trout use is possible but unknown.

ENHANCEMENT OPPORTUNITIES: None

Project type:

Equipment access:
