Spawning habitat conditions:  None  Poor  Fair  Good  Excellent

Describe spawning habitat:

Rearing habitat conditions:  None  Poor  Fair  Good  Excellent

Describe pond and other rearing habitat: The initial 7 meters is mostly riffled with some cascades over the river bank. There is an old beaver dam at 7 meters with a small shallow pooled area immediately upstream. At 41 meters, there is a 4 foot fir lying across the stream bed that impounds the water upstream. From this point to the upstream end, the habitat is shallow and slow-moving with substrate that has moss covered cobble and small boulders.

Describe unaccessible habitat:

Wetland type:  Bog  Marsh  Scrub-shrub  Forested

Describe:

Flooding potential:  Low  Medium  High

Describe: This site appears to get some floodwater flow along the terrace wall and into the head end of this site at times.
