

Spawning habitat conditions: None Poor Fair Good Excellent

Describe spawning habitat: It consists of 2"-4" gravel and is mostly pooled. There is good brushy cover.

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat: The first 60 meters is low gradient, has a mostly cobble substrate and has good amounts of LWD. From 60 meters to 182 meters, the stream ranges from 6% to 10% grade, has a bouldery substrate and is step-pooled. Upstream from this point to the end of the survey, the stream gradient is 15% and the habitat is mostly cascades.

Describe unaccessible habitat:

Wetland type: Bog Marsh Scrub-shrub Forested

Describe:

Flooding potential: Low Medium High

Describe: This stream enters on a side channel and there was little evidence of flooding observed.

FISH INFORMATION

Site entry condition: Poor Fair Good

Describe: The site enters into a side channel and there are no obstructions to fish access.

Coho access and use: Juvenile Unknown None Poor Fair Good
Adult Unknown None Poor Fair Good

Describe: There were no fish observed during the survey. This site is located at the upper range of coho use.

Other species access and use: Chum Pink Sockeye Chinook Trout

Describe: This site is accessible to trout also.

ENHANCEMENT OPPORTUNITIES : None

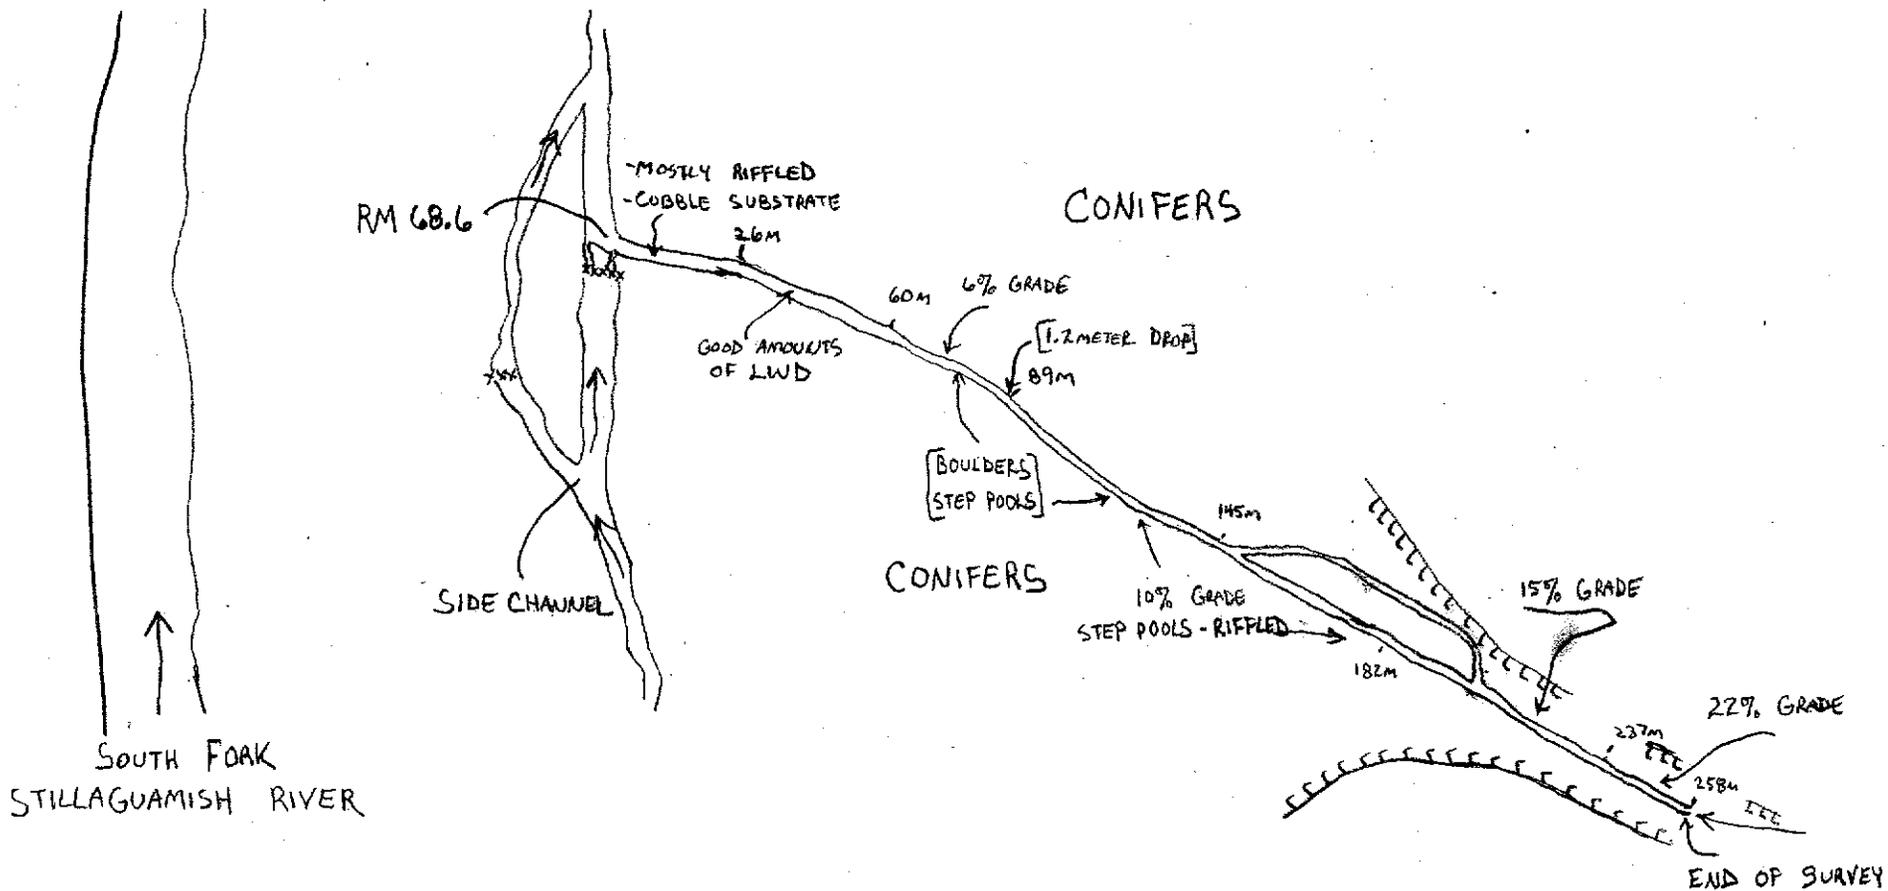

Project type:

Equipment access:

ADDITIONAL COMMENTS: An adult char was observed in the side channel that this site enters.
