

Spawning habitat conditions: None Poor Fair Good Excellent

Describe spawning habitat:

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitat:

Describe unaccessible habitat: This system has some nice pools created by beaver dams. This pooled section is 325m long, 7m wide and has three seperate beaver dams on it. These are nice structured pools that offer excellent rearing.

Wetland type: Bog Marsh Scrub-shrub Forested

Describe:

Flooding potential: Low Medium High

Describe: The lower 173m of this system had river water enter in it and lightly silted the substrate, while the section above is more protected from the river by a higher bank between it and the river, and did not get affected by the Nov. 95 flood event. Its quite possible that the lower section may eventually be eaten away during future flood events.

FISH INFORMATION

Site entry condition: Poor Fair Good

Describe: There is a six foot drop at entry.

Coho access and use: Juvenile Unknown None Poor Fair Good
Adult Unknown None Poor Fair Good

Describe: This system was visited several years ago and had coho juveniles rearing in it when there was access.

Other species acces and use: Chum Pink Sockeye Res. Trout Anad trout

Describe: No trout were observed but there is good rearing habitat available.

ENHANCEMENT OPPORTUNITIES

Project type:

Equipment access:

ADDITIONAL COMMENTS It is possible that future flood events can create access to this site.
