

Habitat Information:

Water sources: Springs, surface runoff

Intermittent/year-around: Unknown, probably intermittent

Estimated flows (CFS): 0.1 - 0.2

- On 11/16/95 the flow was estimated as 0.1 - 0.2 cfs

Water temperatures: Lower end: 5.5° C

- On 11/16/95 the temp was 9.5° C

Adjacent stream temperature [20.0159]: 5.5° C

Other water observations: Water is slightly tannic colored.

Site area measurements: Indirect Direct Combination

- Width: 0.5 - 1 m
- Depth: 5 -10 cm Max- 20 cm
- Total length surveyed: 50 m

Total existing habitat areas (est): 20 m²

- Spawning area: 0
- Impounded area: 0
- Other rearing area: 20 m²

Spawning habitat conditions: None Poor Fair Good Excellent

Describe spawning habitats: NA

Rearing habitat conditions: None Poor Fair Good Excellent

Describe pond and other rearing habitats:

- Cover is provided by woody debris, bank overhang and overhanging brush.
- Moderate gradient were observable.

Describe nonaccessible habitat: NA

Describe wetland: Bog Marsh Scrub-shrub Wetland Forested Wetland

- No accessible associated wetlands

Flooding potential: Low Medium High

Fish Information:

Site entry condition to (20.0159): Poor Fair Good

- This stream egresses on a moderate gradient and cascades over woody debris.

Coho access and use: Juvenile- Unknown None Poor Fair Good
Adult- Unknown None Poor Fair Good

- Coho juvenile use has not been sampled and no fish were observed during the survey.

Other species access and use: Chum Pink Sockeye Chinook Trout

- It is unknown at this time if any trout use this site.

Habitat Improvements:

Enhancement opportunities:

- Remove excessive debris
- Maintain integrity of the system.

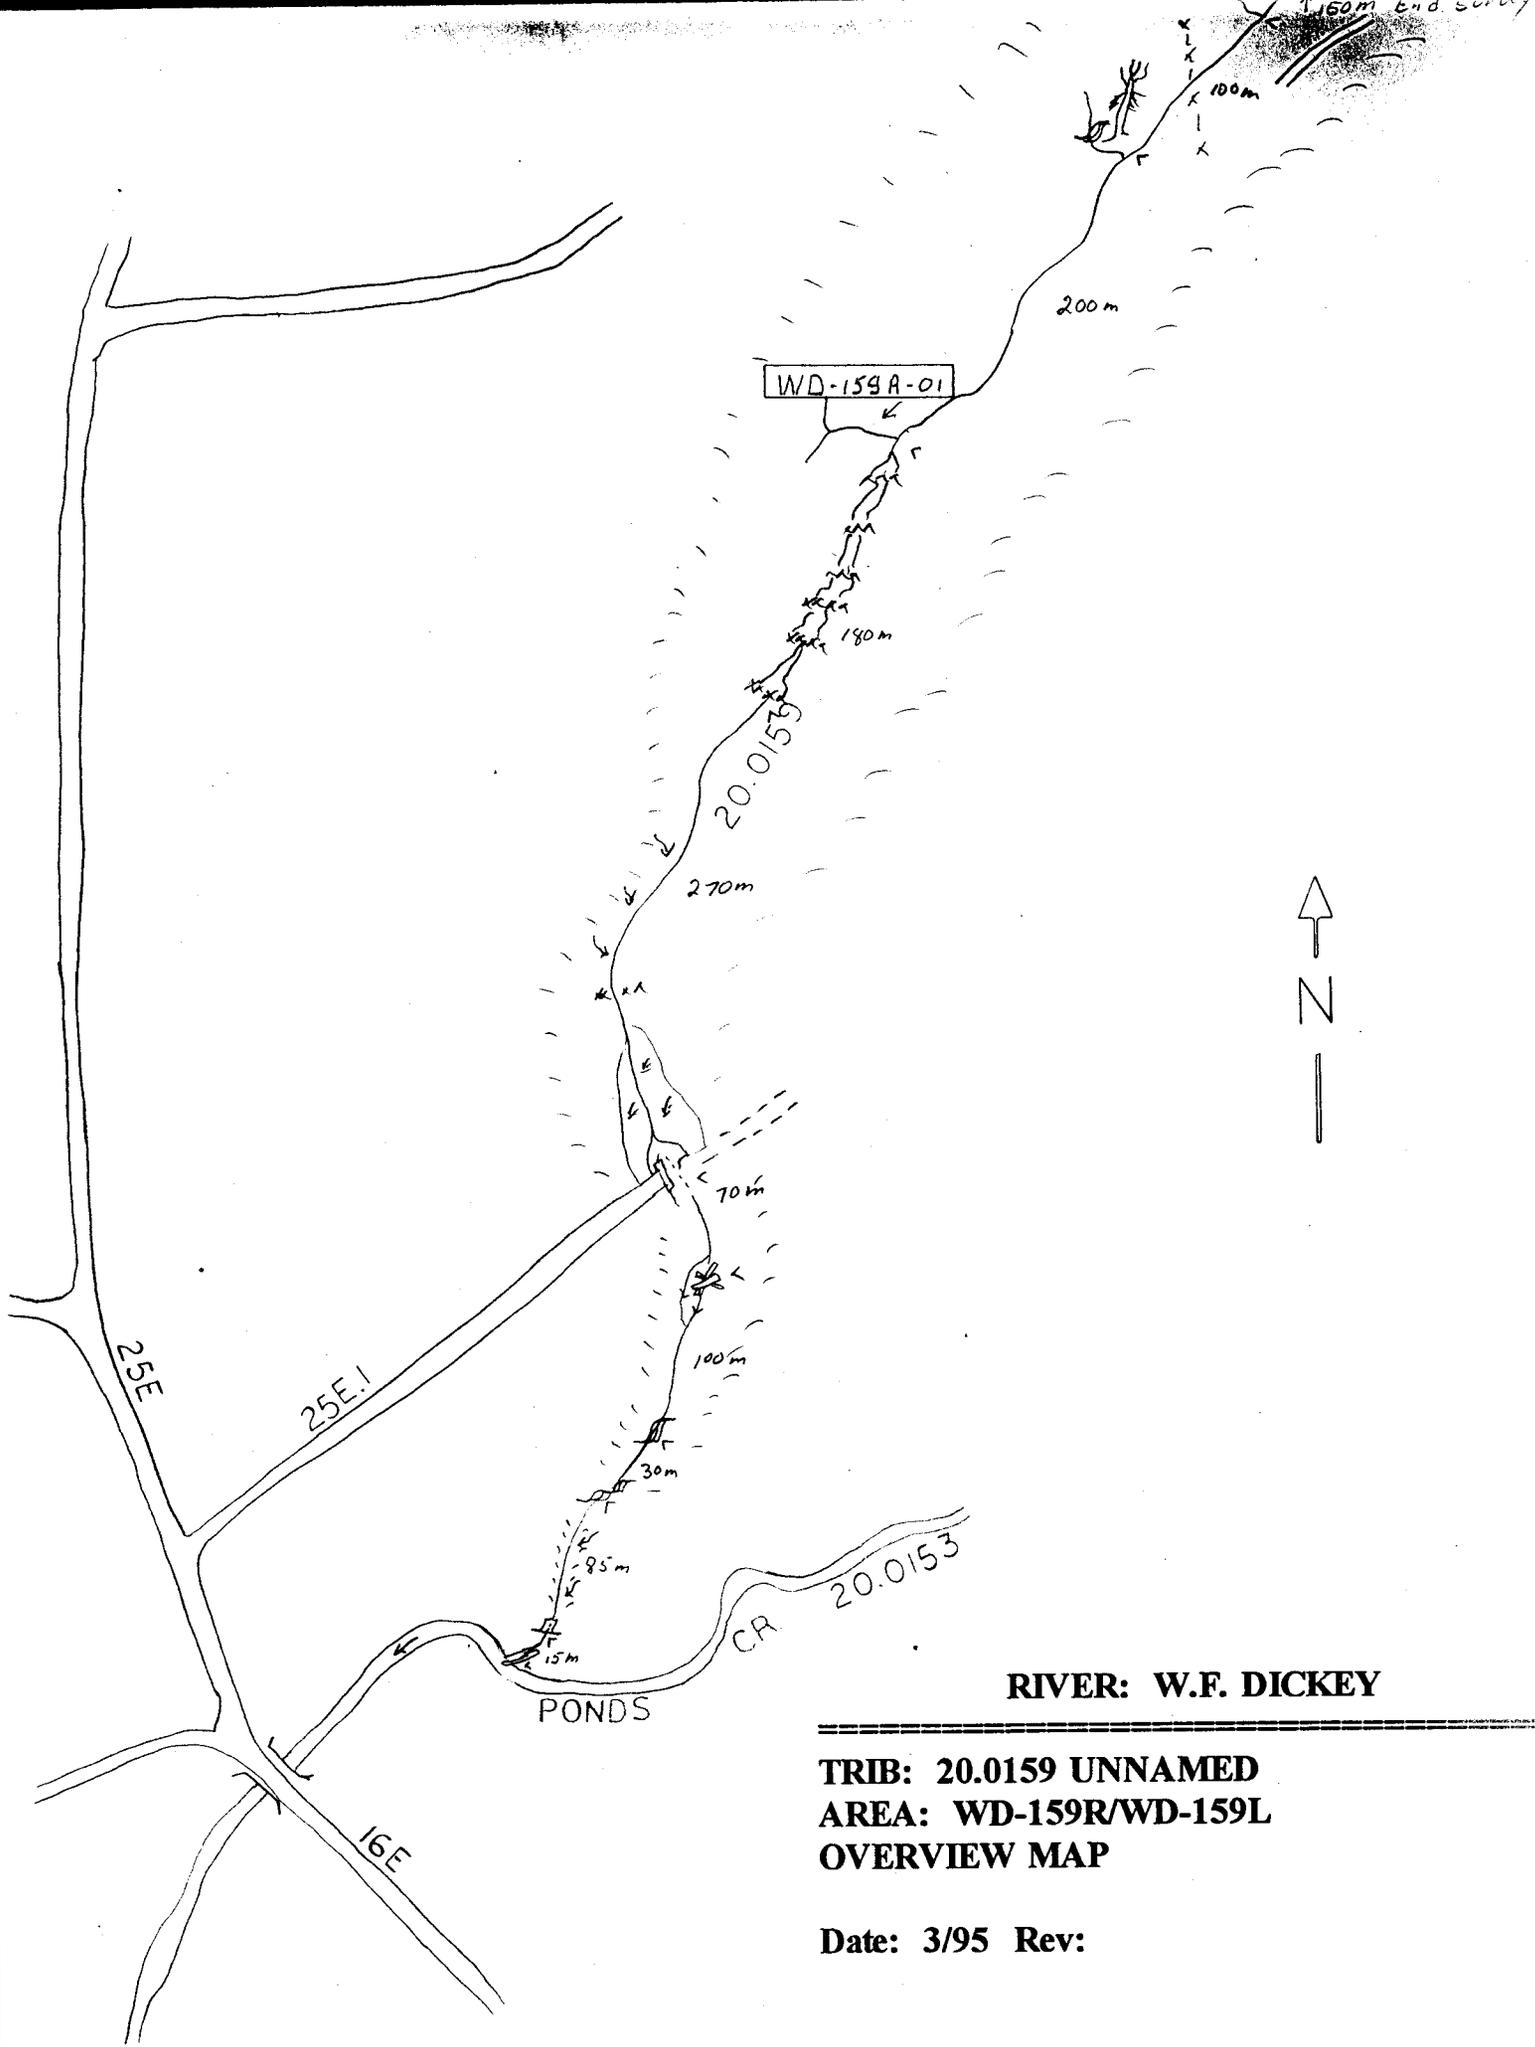

Additional comments:

This is a small tributary which has been badly abused, but there is a part that may be usable. It is difficult to analyze since the logging slash is so heavy in that area.
