It will most likely be dry and is an incised channel in mud/silt substrate.

FISH ACCESS AND CURRENT USE: Fish would need high flows to access and leave this channel. Several sticklebacks were observed in some small isolated pools.

FLOODING POTENTIAL: High - backwater flooding likely throughout stream.

LANDOWNER: ITT Rayonier

COMMENTS & RECOMMENDATIONS: This stream is useful only as a short riverine pond egress channel. It is dry most of the time - but does flow during periods of rain. Enhancement efforts should be directed towards increasing the flow of water into this system, however there does not appear to be any adjacent water source available. Due to the poor water source, enhancement of this system should be low priority.
