COMMENTS & RECOMMENDATIONS: This stream has:

- Good egress to WD-L2-07.
- Extensive blowdown and slash in channel above 80 m (clearcut zone).
- Has a moderate gradient with gravel/cobble bottom composition.

This stream could be characterized as a small, moderate gradient terrace trib with little rearing potential. It represents one-half of the water source for lower WD-L2-07.

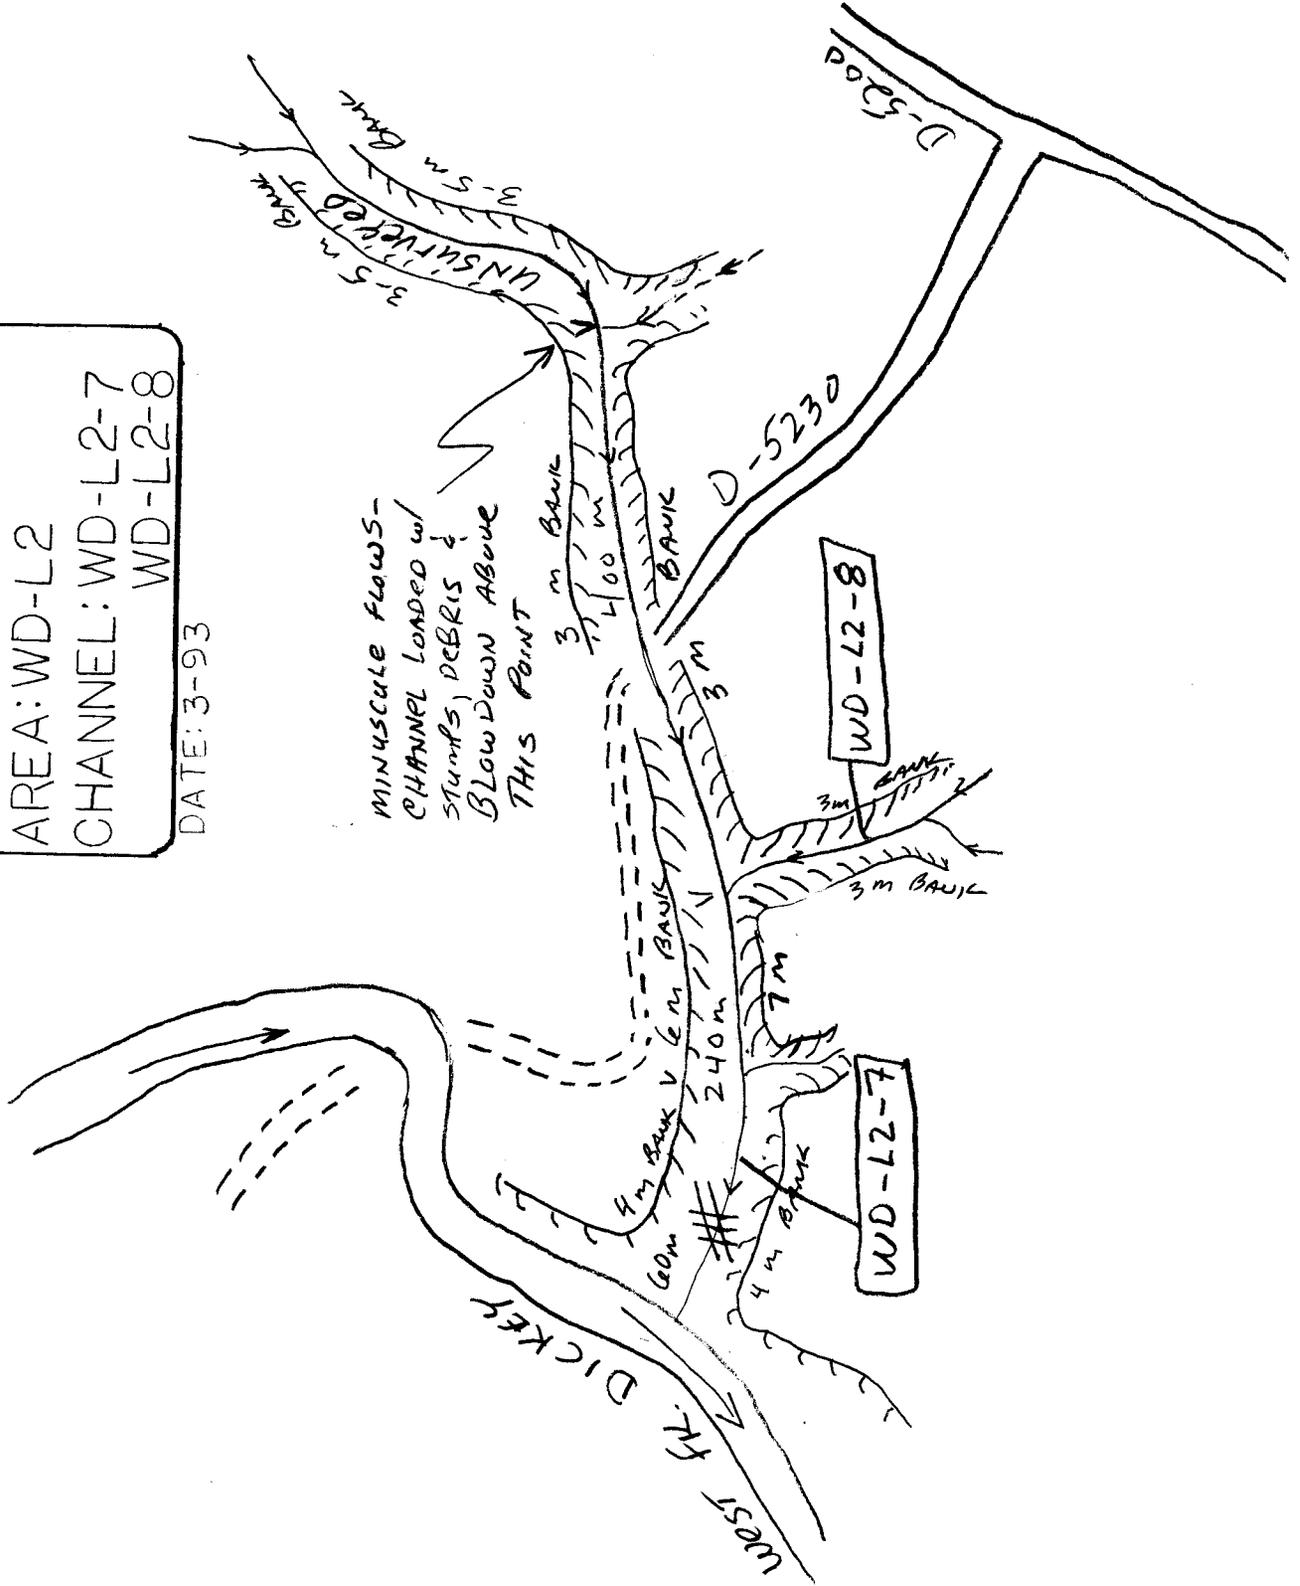

Recommend: (moderate priority)

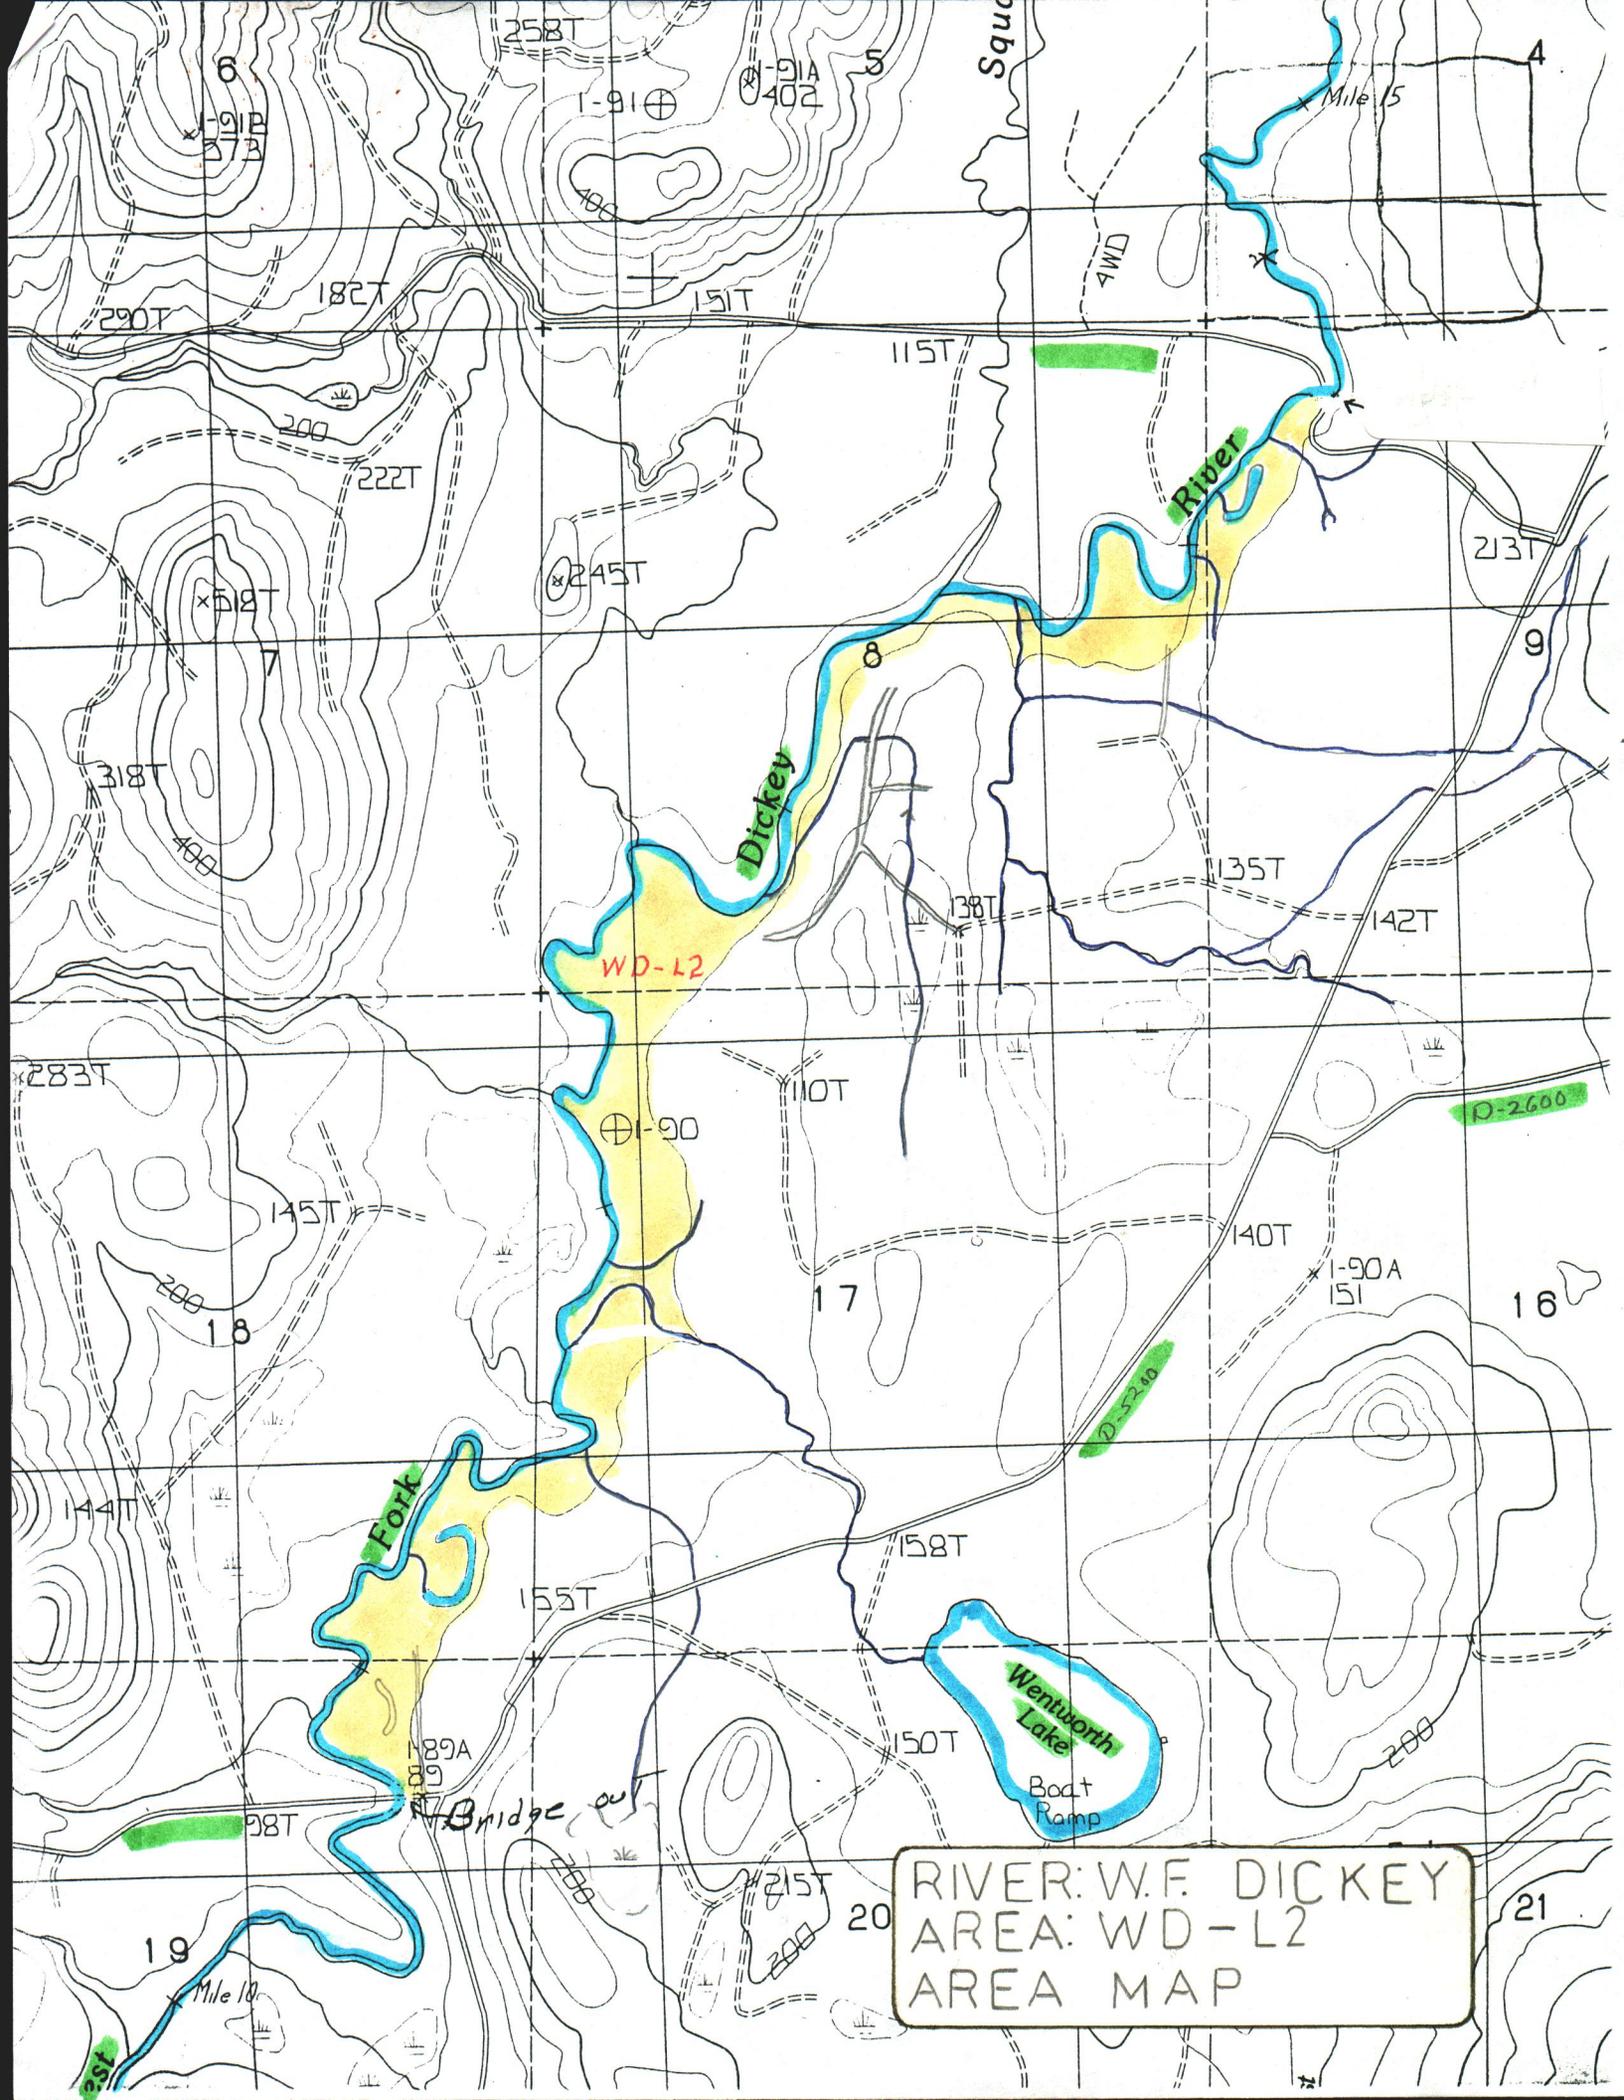

- Maintain channel integrity.
