COMMENTS & RECOMMENDATIONS:
- Lower and mid reach have low to moderate gradient.
- Several small (~60 cm) debris jams throughout stream. Appear passable during high water.
- At ~70 m there is beaver work on top of alder roots resulting in a ~1.3 m debris jam.
- Stream flows through a notched valley.
- Shade is provided by a young coniferous forest.
- Cover is provided by aquatic and overhanging vegetation, woody debris and tannic colored water.
- There are three low flowing tributaries that contribute ~45 lpm each.

Recommend:
- Eliminate debris jams.
- Install plank controls.
- Maintain integrity of the stream.
