Introduction

The Washington State Department of Fish and Wildlife (WDFW) initiated the warmwater Volunteer Angler Diary program in 1990 as a cooperative effort between the Department's Fish Management Division and Washington's warmwater anglers. The program's primary objectives were to establish a database of catch information for warmwater fishes from a large cross-section of waters, and to improve communication and cooperation between the Department and the anglers. The program initially targeted bass and walleye. However, since 2000, the program was expanded to collect catch information on the six warmwater species managed under the Warmwater Enhancement Bill. Those species are: largemouth bass, smallmouth bass, walleye, black crappie, tiger muskie, and channel catfish.

Volunteer angler diary data is used in conjunction with biological sampling and creel census information in order to monitor the condition of, and assess future management options for, warmwater fish populations in Washington State.

Methods

Participants in the Volunteer Angler Diary Program are issued a waterproof, 6-ring notebook with a set of removable data sheets, along with instructions on how to complete them (Figure 1). Volunteers agree to complete a data sheet for each fishing trip taken during the year for any of the six warmwater species. The anglers are to complete the sheets regardless of their fishing success. Anglers may also complete data sheets for friends and/or family that fish with them and are not actively participating in the program.

Volunteer anglers are asked to record their name, the date, water being fished, county, target species, number of each species caught, the length of each fish caught to the nearest quarter inch, the total number of hours fished for each species, and whether the fish caught are retained or released.

Completed data sheets are then to be returned to WDFW by the end of the year. New data sheets are automatically mailed to each volunteer returning completed forms. Volunteer Angler Diary data is then entered into a computer database. Catch summaries, including catch rates and hours fished, along with length frequency distribution graphs for each species are produced and published in an annual report.

Results

Summary of General Results

Participation in the Volunteer Angler Diary Program has fluctuated since the program's inception in 1990 (Table 1). The goal of the program was to enlist 100 anglers from all regions of the state. Unfortunately, the program has fallen short of that goal. Since the inception of the program, 154 anglers signed up to participate and 37 have participated as guests. A large number of anglers (94) have dropped out of the program. These anglers either informed the agency that they no longer wished to participate, or efforts to contact them were unsuccessful.

Therefore, the current number of registered anglers is now at 60. The number of anglers participating (registered and guest anglers) in any given year has ranged from a low of 12 anglers in 1995 to a high of 45 anglers in 2000, with the average participation per year at 25 anglers. In 2003, a total of 42 anglers (27 registered anglers and 15 guest anglers) participated in the program.

Table 1. Angler participation and number of trips from 1990-2003.

| Year | No. of Registered Anglers | No. of Participating Anglers | Percent Participation | No. of Trips |
|------|---------------------------|------------------------------|------------------------------|--------------|
| 1990 | no data | 14 | no data | 210 |
| 1991 | no data | 21 | no data | 482 |
| 1992 | no data | 27 | no data | 760 |
| 1993 | 62 | 27 | 44 | 655 |
| 1994 | 32 | 17 | 53 | 361 |
| 1995 | 27 | 12 | 44 | 235 |
| 1996 | 45 | 21 | 47 | 583 |
| 1997 | 47 | 14 | 30 | 281 |
| 1998 | 48 | 13 | 27 | 201 |
| 1999 | no data | no data | no data | no data |
| 2000 | 92 | 45 ¹ | 14 | 402 |
| 2001 | 113 | 33^{2} | 25 | 271 |
| 2002 | 132 | 44 ³ | 27 | 549 |
| 2003 | 60 | 42 ⁴ | 62 | 493 |

¹ 32 participants were not registered

The 42 anglers submitted data for a total of 510 individual fishing trips. The data from 20 (<1%) of these trips had to be excluded because they were unusable. Therefore, the final dataset came from data from a total of 490 individual fishing trips conducted on 68 different bodies of water.

² 5 participants were not registered

³ 17 participants were not registered

⁴ 15 participants were not registered

A total of 744 largemouth bass, 807 smallmouth bass, 541 walleye, 71 black crappie, and 2 channel catfish were reported being caught. No tiger muskie were caught this year. Ninety-nine percent (N = 741) of the 744 largemouth bass caught were released. Ninety-nine percent (N = 780) of the 787 smallmouth bass caught were released. Forty-nine percent (N = 263) of the 545 walleye caught were released. Seventeen percent (N = 12) of the 71 black crappie caught were released. One hundred percent (N = 2) of the 2 channel catfish caught were released.

Largemouth Bass

Catch Data

A total of 369 largemouth bass, 12 inches or greater, were caught in 792.4 hours fished on 156 individual fishing trips to 47 different waters in 2003. Catch and release information was available for all trips. Anglers reported practicing catch and release fishing on largemouth bass in 2003 on 154 (99%) trips. Catch and release information was available for 744 individual largemouth bass of all sizes caught. Ninety-nine percent (741) of those fish were released. Catch and release information was also available for 369 individual largemouth bass 12 inches or greater caught. One hundred percent of those fish were released.

A complete summary of catch, hours fished and catch rates for largemouth bass 12 inches or greater are listed for each individual water fished in 2003 in which at least one largemouth bass greater than 12 inches was caught (Table 2).

Table 2. Summary of catch, hours fished, and catch rates (catch per unit effort (CPUE)) for largemouth bass 12 inches or greater for each individual water fished in 2003.

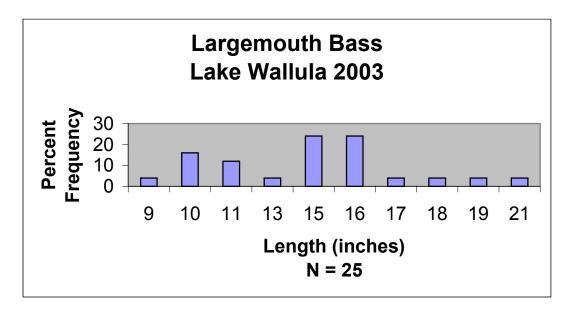

Figure 12. Length frequency distribution of largemouth bass in Lake Wallula (Benton, Franklin, Grant, and Walla Walla Cos.) in 2003.

A total of 41 largemouth bass, ranging from 11 inches to 23 inches, were caught on 3 fishing trips to Washburn Lake (Okanogan County) in 2003 (Figure 13).

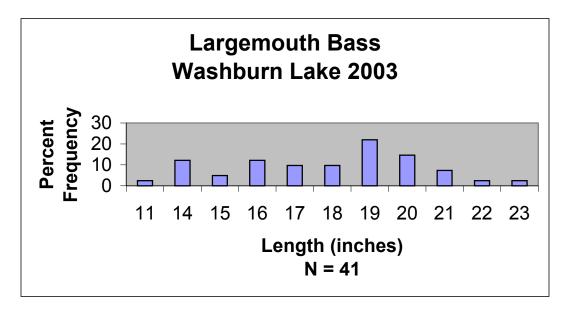

Figure 13. Length frequency distribution of largemouth bass in Washburn Lake (Okanogan Co.) in 2003.

A total of 17 largemouth bass, ranging from 14 inches to 22 inches, were caught on 2 fishing trips to Whitestone Lake (Okanogan County) in 2003 (Figure 14).

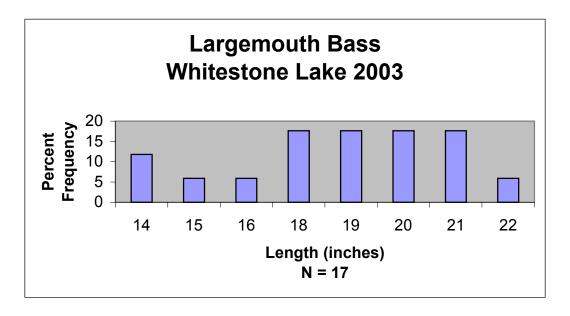

Figure 14. Length frequency distribution of largemouth bass in Whitestone Lake (Okanogan Co.) in 2003.

Comparative Catch Information

The statewide catch rate or catch per unit effort (CPUE) for largemouth bass of any size was 0.94 fish per hour in 2003. This is now highest statewide CPUE for largemouth bass of any size. The previous high CPUE was 0.77 fish per hour in 1993. The CPUE for other years in which data was collected, ranged from 0.39 to 0.73 (Table 3). The statewide CPUE for largemouth bass 12 inches or greater was 0.47 fish per hour in 2003. The statewide catch rate for largemouth bass 12 inches or greater was highest in 1993 at 0.59 fish per hour. The CPUE for other years in which data was collected, ranged from 0.16 to 0.51 (Table 3).

Table 3. Annual average volunteer angler catch rate (catch per unit effort (CPUE)) for largemouth bass caught of any size and for largemouth bass 12 inches or greater, 1990-2003 (No data was available for 1999).

Smallmouth Bass

Catch Data

A total of 648 smallmouth bass, 11 inches or greater, were caught in 639.5 hours fished on 140 individual fishing trips to 26 different waters in 2003. Catch and release information was available for all trips. Anglers reported practicing catch and release on 135 (96%) trips. Catch and release information was available for 787 individual smallmouth bass of all sizes caught. Ninety-nine percent (780) of those fish were released. Catch and release information was also available for 648 individual largemouth bass 11 inches or greater caught. Ninety-nine percent (643) of those fish were released.

A complete summary of catch, hours fished and catch rates for smallmouth bass 11 inches or greater are listed for each individual water fished in 2003 in which at least one smallmouth bass greater than 11 inches was caught (Table 4).

Table 4. Summary of catch, hours fished, and catch rates (catch per unit effort (CPUE)) for smallmouth bass 11 inches or greater for each individual water fished in 2003.

Comparative Catch Information

The statewide CPUE for smallmouth bass of any size was 1.23 fish per hour in 2003. The statewide CPUE for smallmouth bass of any size was highest in 1995 at 1.31 fish per hour. The CPUE for all other years in which data was collected, ranged from 0.34 to 1.06 (Table 5). The statewide CPUE for smallmouth bass 11 inches or greater was 1.01 fish per hour in 2003. The statewide CPUE for smallmouth bass 11 inches or greater was highest in 1995 at 1.14 fish per hour. The CPUE for other years in which data was collected, ranged for 0.25 to 0.84 fish per hour (Table 5).

Walleye

Catch Data

A total of 370 walleye, 15 inches or greater, were caught in 682 hours fished on 145 individual fishing trips to 13 different waters in 2003. Catch and release information was available for all trips. Anglers reported practicing catch and release fishing on walleye in 2003 on 38 (18%) trips. Catch and release information was available for 541 walleve of all sizes caught. Forty-nine percent (263) of those fish were released. Catch and release information was also available for 370 walleye 15 inches or greater caught. Sixty-six percent (245) of those fish were released.

A complete summary of catch, hours fished and catch rates for walleye 15 inches or greater are listed for each individual water fished in 2003 in which at least one walleye greater than 15 inches was caught (Table 6).

Black Crappie

Catch Data

A total of 71 black crappie, 8 inches or greater, were caught in 37.8 hours fished on 10 individual trips to 6 different waters in 2003. Catch and release information was available for all trips. Anglers reported practicing catch and release fishing on black crappie in 2003 on zero trips. Catch and release information was available for 71 black crappie of any size. Seventeen percent (17) of those fish were released. Catch and release information was also available for 5 black crappie 8 inches or greater caught. Forty percent (2) of those fish were released.

A complete summary of catch, hours fished and catch rates for black crappie 8 inches or greater are listed for each individual water fished in 2003 in which at least one black crappie greater than 8 inches was caught (Table 8).

Table 8. Summary of catch, hours fished, and catch rates (catch per unit effort (CPUE)) for black crappie 8 inches or greater for each individual water fished in 2003.

| Water | County | No. of Trips | Hours Fished | No. Fish Caught | CPUE | Avg Trip Length (hrs) |
|---------------|------------------|-----------------|-----------------|--------------------|------|--------------------------|
| Duck | Grays Harbor | 2 | 4.5 | 3 | 0.67 | 2.3 |
| I-82 Pond #4 | Yakima | 1 | 2.0 | 1 | 0.50 | 2.0 |
| I-82 Pond #6 | Yakima | 1 | 3.0 | 1 | 0.33 | 3.0 |
| Long | Spokane, Stevens | 4 | 20.8 | 44 | 2.12 | 5.2 |
| Priest Rapids | Yakima | 1 | 2.0 | 2 | 1.00 | 2.0 |
| Thompson-1 | Franklin | 1 | 5.5 | 20 | 3.64 | 5.5 |
| Total | | 10 | 37.8 | 71 | 1.88 | 2.0 |

Length Frequency Distribution

A total of 44 black crappie, ranging from 10 inches to 11 inches, were caught on 4 fishing trips to Long Lake (Spokane and Stevens Counties) in 2003 (Figure 43).

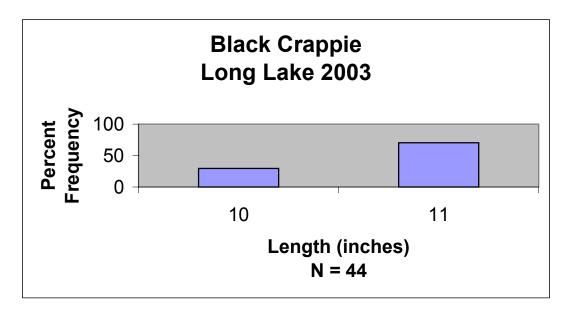

Figure 43. Length frequency distribution of black crappie in Long Lake (Spokane and Stevens Cos.) in 2003.

A total of 20 black crappie, ranging from 6 inches to 11 inches, were caught on 1 fishing trip to Thompson Ponds (Franklin County) in 2003 (Figure 44).

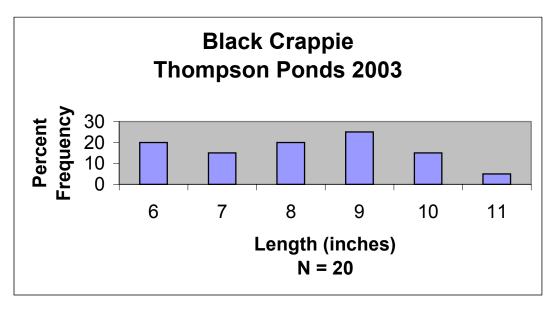

Figure 44. Length frequency distribution of black crappie in Thompson Ponds (Kittitas Co.) in 2003.

Comparative Catch Information

There are only three years of data available (Table 9) to calculate statewide catch per unit effort (CPUE). The statewide CPUE for black crappie of any size was 1.88 fish per hour in 2003. The statewide CPUE for black crappie of any size was highest in 2001 (2.36) and lowest in 2002 (1.41). The statewide CPUE for black crappie 8 inches or greater was 0.13 fish per hour in 2003, which is also the lowest for the three year period. The statewide CPUE black crappie 8 inches or greater was highest in 2002 at 1.22 fish per hour.

Table 9. Annual average volunteer angler catch rate (catch per unit effort (CPUE)) for black crappie caught of any size and for black crappie 8 inches or greater, 2001-2003 (No data prior to 2001).

| | | | All Sizes | | >= 8 inches | |
|------|---------------|---------------------|------------|-------------|-------------|------|
| Year | No. of Waters | Hours Fished | No. Caught | CPUE | No. Caught | CPUE |
| 2001 | 4 | 81.8 | 193 | 2.36 | 102 | 1.25 |
| 2002 | 5 | 46.0 | 65 | 1.41 | 56 | 1.22 |
| 2003 | 6 | 37.8 | 71 | 1.88 | 5 | 0.13 |

Tiger Muskie

Catch Data

There were no specific trips made targeting tiger muskie in 2003. No tiger muskie were caught incidentally in 2003 either.

Comparative Catch Information

There is insufficient data to make any meaningful comparisons.

Channel Catfish

Catch Data

A total of two channel catfish 16 inches or greater, were caught in five hours on one individual trip to one body of water in 2003 (Table 10). Catch and release information was available for this trip. Both of the channel catfish caught were released (100%). Since both fish were 16 inches or greater, the catch and release information would be the same for channel catfish caught of any size.

Table 10. Summary of catch, hours fished, and catch rates (catch per unit effort (CPUE)) for channel catfish 16 inches or greater for each individual water fished in 2003.

| Water | County | No. of Trips | Hours Fished | No. Fish Caught | CPUE | Avg. Trip Length (hrs) |
|------------|----------|--------------|-----------------|-----------------|------|------------------------|
| Whitestone | Okanogan | 1 | 5.0 | 2 | 0.40 | 5.0 |

Comparative Catch Information

There are only three years of data available (Table 11) to calculate statewide catch per unit effort (CPUE). The statewide CPUE for channel catfish of any size was 0.40 fish per hour in 2003. The statewide CPUE for channel catfish of any size was highest in 2002 (1.20) and lowest in 2001 (0.00). The statewide CPUE for channel catfish 16 inches or greater was also 0.40 fish per hour in 2003. The statewide CPUE for channel catfish 16 inches or greater was highest in 2002 (1.00) and lowest in 2001 (0.00).

Table 11. Annual average volunteer angler catch rate (catch per unit effort (CPUE)) for channel catfish caught of any size and for black crappie 8 inches or greater, 2001-2003 (No data prior to 2001).

| | | | All Sizes | | >= 16 inches | |
|------|---------------|---------------------|------------|------|--------------|------|
| Year | No. of Waters | Hours Fished | No. Caught | CPUE | No. Caught | CPUE |
| 2001 | 1 | 7.0 | 0 | 0.00 | 0 | 0.00 |
| 2002 | 1 | 10.0 | 12 | 1.20 | 10 | 1.00 |
| 2003 | 1 | 37.8 | 71 | 1.88 | 5 | 0.13 |

The Washington Department of Fish and Wildlife will provide equal employment opportunities to all potential and existing employees without regard to race, creed, color, sex, sexual orientation, religion, age, marital status, national origin, disability, or Vietnam Era Veteran's Status.
