Trout Identification

Steelhead

Steelhead are ocean-run rainbow trout that run in both summer and winter seasons, returning after one to three years at sea.

Bull Trout

These fish are olive green to brown above and on the sides with no wormlike markings. There are cream or pink spots. The tail is slightly forked. Dolly Varden are typically smaller and are only found in a few headwater streams in Western Washington. Bull trout have a longer jaw and are found in Eastern and Western Washington and may also be encountered in marine waters.

Dolly Varden

Eastern Brook Trout

Dark green or blue with white belly which may become a vibrant orange as the fish nears spawning. Its upper body and dorsal fin have wormlike markings. Its sides have yellow and pink spots with blue rings. The lower fins are white-tipped and the tail is square.

Rainbow Trout

Body color is variable and may be silvery in lakes and reservoirs. Numerous closely grouped spots on dorsal fin and tail. The maxillary (upper jaw bone) does not usually extend beyond the back of the eye.

Brown Trout

This trout's back is brown or olive with large spots. Sides are light brown to yellowish with large dark spots surrounded by halos of blue-gray. The tail has few spots.

Westslope Cutthroat Trout

Body color is variable. Numerous closely grouped spots towards the dorsal fin and tail. The maxillary (upper jaw bone) usually extends beyond the back of the eye. Red or orange slash on the underside of the jaw.
