Marine Fish Rule Simplification

# 1. Changes to bottomfish regulations in Marine Area 4 (east of the Bonilla-Tatoosh line)

Type of Rule Change Proposal
Recreational

Short Description
This rule proposal would align recreational bottomfish regulations in Marine Area 4 (east of the Bonilla-Tatoosh line, also referred to as Marine Area 4B), with recreational bottomfish regulations in Marine Area 4 (west of the Bonilla-Tatoosh line).

Changes to WAC 220-314-020, which describes possession limits for bottomfish, includes: reducing the aggregate daily bottomfish limit from 10 to nine, increasing the rockfish sublimit from six to seven per day, allowing 12 surfperch per day, and removing the lingcod and cabezon size limits. Species allowed within the rockfish sublimit would include yellowtail rockfish and widow rockfish in addition to the current allowance for black rockfish and blue/deacon rockfish. Changes to WAC 220-314-030 would allow anglers to retain yellowtail rockfish and widow rockfish seaward of a line approximating 20 fathoms on days open to recreational salmon fishing in July and August.

Changes to WAC 220-314-040 would open the lingcod fishery from the second Saturday in March through the Second Saturday in October in Marine Area 4B, which is the same as the lingcod season in Marine Area 4, and clarifies that Marine Area 12 is closed to lingcod fishing year-round.

Throughout these WAC’s, additional technical changes have been made to refer to management areas as Marine Area rather than Catch Record Card Area, and replace blue rockfish with blue/deacon rockfish.

Explanation
These proposed changes would simplify regulations in two management areas that are adjacent to one another and commonly fished during a single trip. Revising the regulations for Marine Area 4B so they are more similar to Marine Area 4 makes it easier for recreational anglers to understand the rules. Stock assessments conducted by the National Marine Fisheries Service and adopted by the Pacific Fishery Management Council for federally managed areas west of the Bonilla-Tatoosh line (Marine Area 4) include catch and biological data from species in the area east of the Bonilla-Tatoosh line (Marine Area 4B). These regulatory proposals provide anglers with additional access to healthy bottomfish resources without substantially increased risk of over harvest.

# Shellfish Rule Simplification

**1. Daily limits for green urchins, purple urchins, red urchins, pink scallops, spiny scallops, and sea cucumbers.**

**Type of Rule Change Proposal**
Recreational

**Short Description**
This rule proposal streamlines daily limits for all urchins as uniformly 18 urchins, 18 for sea cucumbers, and from a weight-based daily limit (10 lbs.) to a quantity-based limit of 40 for pink scallops and spiny scallops.

**Explanation**
Currently management of urchins uses two different daily limits (18 for red urchins and purple urchins and 36 for green urchins). This proposal reduces the daily limit of green sea urchins from 36 to 18 to align with other urchin species. It reduces the daily limit of sea cucumbers from 25 to 18 for simplicity. For pink scallops and spiny scallops, the Department is proposing a quantity-based daily limit in lieu of a weight-based daily limit. Quantity based limits are easier for harvesters to comply with in the field. Weight-based daily limits require that animals are first taken to the surface and weighed, presenting enforcement and logistical challenges. A total of 40 aligns with existing daily limits for clams for simplicity. Instituting streamlined daily limits is a simplification and the proposed limits align with conservation objectives.

# 2. Define size limits for pink scallops, spiny scallops, and urchins

**Type of Rule Change Proposal**  
Recreational

**Short Description**  
This rule proposal would make it unlawful to take or possess pink scallops, spiny scallops, green urchins, purples urchins, or red urchins below a minimum size limit for conservation purposes.

**Explanation**  
Currently, minimum size limits for pink scallops, spiny scallops, green urchins, purple urchins, and red urchins are undefined for recreational fisheries. Proposed minimum size limits (and a maximum size limit for red urchins) will preserve opportunity for the affected species to reproduce prior to harvest -- a conservation measure currently instituted by co-managed state and tribal commercial fisheries. Proposed minimum size limits are: 2 inches (pink scallops, spiny scallops), 2 ¼ inches (green urchins, purple urchins), and 3 ¼ inches (red urchins). A maximum size limit of 5 inches is proposed for red urchins to conserve the largest reproductive animals.

# 3. Define closure areas for sea cucumber and urchin recreational fisheries

**Type of Rule Change Proposal**  
Recreational

**Short Description**  
This proposal would make it unlawful to fish for sea cucumbers and sea urchins in 8 conservation closure areas throughout Puget Sound.

**Explanation**  
These closure areas serve as reference areas supporting monitoring of population status, and as conservation measures to protect spawning stock distributed throughout Puget Sound. This conservation proposal permits the long term sustainable management of sea cucumber and sea urchin fisheries and aligns with co-management of urchins and sea cucumbers in Puget Sound.

# 4. Eliminate requirement to retain eastern softshell clams

Type of Rule Change Proposal
Recreational

Short Description
This proposal eliminates the requirement to retain eastern softshell clams dug as bycatch.

Explanation
Eastern softshell clams are sometimes encountered by harvesters as bycatch when targeting other clam species. The current rule requires that eastern softshell clams be retained when encountered as bycatch, counting toward the aggregate daily limit. This rule proposal eliminates the requirement to retain eastern softshell clams encountered as bycatch, but clams will still count toward daily limit if retained. This species is a non-native (but not considered to be invasive) species not often targeted by harvesters. The Department proposes to strike this requirement as a simplification; there is no conservation need for this rule.

Written Testimony (1 comments as of October 4, 2019)
Support (1): Consideration should be given to allow a bonus retention of the eastern softshell clam similar to Atlantic salmon or other unwanted species.

# 5. Clarify lawful gear for intertidal harvest of geoduck

**Type of Rule Change Proposal**
Recreational

**Short Description**
This proposal clarifies that the use of a cylindrical can or tube is lawful gear for the harvest of geoduck and describes a lawful maximum diameter.

**Explanation**
The harvest of intertidal geoduck is commonly conducted with the assistance of a tube or cylinder to temporarily prevent clam-digging holes from caving in. There is not currently a conservation concern with this practice as long as holes are filled in after use. This rule seeks to clarify that this is a lawful gear type, to define the gear, and to define a maximum permissible diameter for tubes or cylinders as 24”.

# 6. Define a caliper measurement

**Type of Rule Change Proposal**
Recreational

**Short Description**
Clarifies regulations regarding the definition of a caliper measurement as a linear measurement when both points of a movable caliper are touching the shell of the shellfish. A fixed caliper gauge is the linear distance between points of the caliper gauge or the diameter of a circular gauge.

**Explanation**
Currently the definition of a caliper measurement, originally referred to in 220-330-050 and in the proposed consolidated 220-330-010, is undefined.

# 7. Define lawful pot escapement component fibers

Type of Rule Change Proposal
Recreational

Short Description
This rule proposal clarifies regulations regarding the definition of lawful fibers which can be used in attaching pot escapement components to shellfish pots.

Explanation
Currently, WAC 220-330-020 describes lawful attachment of pot lid or pot side serving as pot lid as consisting of “…100 percent cotton or other natural fiber twine…” This clarification seeks to define other acceptable fiber types for attachment of escapement component to pots as hemp, jute, or sisal (in addition to 100% cotton) twine. Research conducted by the Northwest Straits Initiative and WDFW has indicated that these “other” fiber types exhibit degradation time similar to 100% cotton twine, sufficient to allow for expedient de-activation of derelict pot gear (Redekopp et al. 2006).

**Purpose of the proposal and its anticipated effects, including any changes in existing rules:** The department makes adjustments to recreational fishing rules to maximize conservation and recreational-fishing opportunity. This proposal includes changes to shellfish, marine fish and forage fish recreational fishing regulations, focusing on clarification and simplification.

**Reasons supporting proposal:** The changes in this proposal are needed to make necessary adjustments to recreational fishing/shellfishing rules based on department data, public feedback, and the desire of the department to reduce complexity of the sport rules as reflected in the annual pamphlet.
