Subject: Grass Carp Stocking Application

Hello Mr. Stevens. Thank you for your time in reviewing this Grass Carp stocking permit application through the SEPA process. I am familiar with your concern and have considered the level of risk of these fish escaping from the pond described in the permit. I visited the site and concluded this location had no outlet and was well outside of the floodplain. WDFW has a stringent review process for any application to stock Grass Carp, but do allow for it where risks are minimal. Thank you for your interest in our program.

This is an invasive species with unknown implications for our watersheds if they are allowed to escape. Their introduction should not be allowed.
