Subject: Eells Springs Hatchery Redevelopment; (Lead Agency File No DNS20-08, Statewide SEPA register No. 202000710)

Morgan, The Washington Department of Fish and Wildlife (WDFW) extends our thanks to Ecology for your thoughtful comments regarding our plans to redevelop the Eells Springs Hatchery. WDFW has initiated follow up discussions with Tim Mullin, Toxics Cleanup Program and our Ecology contact at this site to ensure we complete our site cleanup efforts as identified in the Volunteer Cleanup Program. WDFW is confident with guidance provided by Tim, that this phase of the Redevelopment will be completed in compliance with WAC173-340 and WAC173-340-515(5)(b) as part of this phase of the hatchery's redevelopment construction schedule.

Additionally WDFW is committed to coordinate its planned work at Eells Springs Hatchery with Ecology's Water Quality/Watershed Resources Unit and Solid Waste Management teams in ensuring all appropriate conditions and requirements for the Construction Stormwater General Permit and all grading and fill activities are completed in compliance with state and local jurisdictions.

Again thank you for Ecology's review and comments provided to WDFW's Eells Springs Hatchery Redevelopment SEPA DNS.

If you have any questions or additional concerns please feel free to contact me.
