Subject: RE: ECY SEPA 202002272 - West Rocky Prairie - Beaver Creek Culvert Removal - Comments
Date: Thursday, May 21, 2020 12:11:51 PM
Attachments: [image001.png](#)

Good afternoon,

Thank you for your review of the West Rocky Prairie – Beaver Creek Culvert Removal project, located in Thurston County.

No toxic soils or contaminants are expected to be within the work area of the project. The project location is outside of the Tacoma Smelter Plume area. If contamination of soils or groundwater becomes readily apparent, I will notify ECY (Environmental Report Tracking System) immediately.

Erosion control measures (straw wattles) will be in place prior to construction and will remain in place for the duration of the project. After the culverts are removed and the stream banks are regraded to match the natural grade, the disturbed area will be seeded with native grasses/forbs. Per regulations erosion control measures will stay in place until vegetation is 70% recovered to the pre-disturbance conditions. Streambed gravels will be added to the newly exposed channel to reduce erosion and sedimentation with large rain events.

The project site is approximately 1,600 SF, which exempts this project from Construction Stormwater General permit. This location of Beaver Creek does not have a Water Quality Category.

Thank you again for your review of this project.

Anna
