DETERMINATION OF NONSIGNIFICANCE (DNS)

Name of Proposal: DNS 20-058: LONE RANCH CREEK FISH PASSAGE

Description of Proposal:

This project will improve fish passage for Kettle River fluvial redband trout and other fish species by correcting a barrier on Lone Ranch Creek, a tributary stream. The existing crossing structure is one 4 ft. diameter culvert that does not provide for fish passage due to outfall drop and slope. The culvert is undersized, susceptible to failure at high flow, and has overtopped numerous times in the last five years. The new crossing will be a 20 ft x 50 ft bridge with pre-cast footings. The new crossing will provide fish passage for all species and life stages of fish by allowing natural stream processes, such as wood and sediment transport, flood flow conveyance, low flow continuity, and margin habitat, present in the adjacent channel to occur through the new crossing structure.
