

Excerpts from Policy 3630, Columbia River Salmon Fishery Management, relating to a Commercial Fishing License Reduction Program and Advancing the Development and Implementation of Alternative Commercial Fishing Gear

General Provisions

The Department will implement the following actions to promote the achievement of the purposes of this policy.

1. Development and Implementation of Alternative Commercial Fishing Gear.

The Department shall work towards the goal that commercial fishing gear being used on the mainstem Columbia River optimize conservation and economic benefits. The Department shall pursue the development and, as appropriate, implementation of commercial fishing gear alternatives to the gears currently authorized in non-treaty mainstem commercial fisheries. This should be done in a manner that seeks to improve on the catches of target species and stocks in comparison to the mortality of non-target species and stocks, in an economically efficient manner across the commercial fishery infrastructure segments. The development and implementation process shall include the following actions.

 - a. The Department will work with representatives of the commercial and recreational fishing industries to develop recommendations on the development and implementation of commercial fishing gear that will increase the selectivity potential of commercial fisheries compared to current capabilities, and/or promote state conservation objectives (i.e. controlling hatchery fish on spawning grounds). Important objectives of this effort include gaining broad support from the commercial fishing industry, encouraging creative innovation from the commercial fishing industry, and complimenting the economic potential and stability of the commercial fishery while minimizing impacts to mainstem and tributary recreational fisheries. The Department shall consider options that provide economic and other incentives for participants to become involved in alternative gear fisheries.
 - b. The Department shall seek funding, as appropriate, to support efforts to develop and implement alternative gears, and work with partners as appropriate to experiment with alternative gear, conduct any necessary studies (in such areas as release mortality, stock compositions, and economic viability), and otherwise facilitate the development of options for alternative gear use. Assessments of alternative gear types in comparison to current gear should include at least catch rates, release mortality rates and overall mortality effects on relevant stocks, economic value, and effect on the commercial fishery infrastructure as a whole. It should also be informed by perspectives from commercial and recreational fisheries.

The Department shall update the Commission annually on progress on the above policy actions. The Commission will consider authorizing any successful alternative commercial fishing gears through rulemaking in a manner that takes into account allocations and concurrent regulations with Oregon.

- 3. Commercial Fishery License Reduction Program. The comprehensive review of Policy C-3620 from 2013 – 2017 noted a low level of progress towards the commercial fishery license buyback program advocated by policy intent in 2013. The Commission recognizes that a fully effective program to buyback commercial fishery licenses would need to be implemented by both Oregon and Washington, that statutory changes may be required in one or both States, and that there are many difficulties in designing a concurrent and equitable program. The Department shall work with members of the commercial fishing industry, representatives of the recreational fishery sectors and the ODFW to develop workable objectives and options for a possible commercial license buyback program. The Department shall then strive to convene a policy level joint-State body with appropriate Oregon representatives to develop a report on alternatives for an effective program that is to be submitted to the Washington and Oregon Fish and Wildlife Commissions for consideration and, if warranted, possible transmission to statutory authorities.
