**DETERMINATION OF NONSIGNIFICANCE (DNS)**

**Name of Proposal:** DNS 24-017: MIDDLE HUTCHINS FOREST RESTORATION THIN – PHASE 2

**Description of Proposal:**

This is the second project phase of the “Middle Hutchins Forest Restoration Thin” DNS 23-014 which was completed in 2023. “Middle Hutchins Phase 2 Forest Restoration Thin” project consists of 310 acres involving selective mechanical thinning operations within the L.T. Murray Wildlife area. WDFW has ownership of said property. Thinning project will result in improved forest health, reduced wildfire risk in the Taneum and South Ellensburg Wildland Urban Interface (WUI), restoring forest closer to the “historic range of variability”, improved habitat for wildlife species including large ungulates, small mammals, and avian species. Debris/slash from timber harvest operations (limbs, tops, etc.) will be piled and trailed at landings in preparation for burning.

Slash burning will be carried out within wet seasons after timber harvest work has been completed when the threat of escapement is low. All slash burning will be permitted and conducted as per Washington State Department of Natural Resources (DNR) and Washington State Department of Ecology (DOE) conditions and regulations. Pile burning is expected to occur sometime between the end of November and the first week of December 2024 when conditions are optimal. Approximately 2 years post-harvest (2026) prescribed burning will take place within the project area and will be permitted and conducted as per Washington State Department of Natural Resources (DNR) and Washington State Department of Ecology (DOE).
