Subject: 2024 Willapa Bay Fisheries Update - week 38 - Sept 16 - 22
Attachments: 2024 WB Marine Area Recreational Catch Estimate Summary Draft 09.27.2024.pdf; Naselle Hatchery Adult CHK Summary 09.27.2024.pdf; 2024 WB Hatchery Chinook Eggtake Draft 09.27.2024.pdf

Hello Everyone,

If you have any questions or comments regarding any of the information provided through these emails for the 2024 salmon season, please reply to this email and/or contact the regional staff directly at the Montesano office (360-249-4628).

Recreational Marine Area Fishery

There was a significant decrease in effort and catch last week for statistical week 38, Sept 16 - 22, 2024, compared to the previous week. The highest effort (in terms of vessels), number of anglers, and the only catch were reported on Friday, Sept 20. There were zero hatchery Chinook salmon and 3 coho reported by staff caught in this statistical week from Sept 16 - 22 at the Tokeland and South Bend dock locations. There were no unmarked Chinook landed and no natural origin (NOR) Chinook encountered then released from the fishery during this same week. Currently, the marine recreational salmon fishery has accrued 37 NOR Chinook impacts, or 66.7% of the preseason expected natural origin Chinook impacts for the season. (See *attachment: 2024 WB Marine Area Recreational Catch Estimate Summary Draft 09.27.2024.pdf*)

The marine recreational salmon creel monitoring program in the northern area of Willapa harbor will end at the end of the month on September 30, 2024.

If you are interested in any data collected by the Ocean Sampling Program for Ocean Areas 1- 4, you can find those data on our website at [Ocean sport salmon quota report | Washington Department of Fish & Wildlife](#)

Spawning Ground Surveys

Stream surveys in the Willapa Bay basin have now begun in most Chinook spawning areas. There are thousands of Chinook salmon that have been observed staging in the Naselle River in the section below the weir, and Nemah River section below the weir. Coho have been observed in some rivers as well. Chinook redds are being observed and carcasses are being found throughout several rivers now that staff have begun a full sweep of Willapa systems.

Hatchery Chinook Rack Returns

Naselle River Hatchery

To-date, a total of 5,115 adult and 106 jack Chinook salmon have volunteered into the attraction channel and recruited into the hatchery. Of these, 104 unmarked Chinook salmon that have volunteered into the hatchery, and all unmarked Chinook have been planted upstream above the hatchery. This week, Chinook spawning started at Naselle Hatchery. There were 433 female Chinook spawned and 1,299,000 Chinook eggs collected at the facility to-date. A total of 308 mortalities have been reported to-date, and there are approximately 3,500 fish on-hand in the

pond (this includes roughly 1,400 green, non-ripe female Chinook currently in the pond). (See attachment: [Naselle Hatchery Adult CHK Summary 09.27.2024.pdf](#) AND [2024 WB Hatchery Chinook Eggtake Draft 09.272024.pdf](#)).

There have also been 13 coho mortalities and 1,155 coho surplus reported at Naselle Hatchery. Coho spawning will begin sometime in late October.

Nemah Hatchery

Nemah Hatchery has had 2,482 adult and 15 jack Chinook salmon recruit into the hatchery to-date. Of these, 182 natural origin Chinook salmon were planted upstream above the hatchery. This week, the staff moved 350 female Chinook and 150 male Chinook from the river below the weir into the pond at the hatchery and began Chinook spawning. There were 311 females spawned and 933,000 Chinook eggs collected at the facility to-date. A total of 70 mortalities have been reported to-date and there are approximately 1,590 fish on-hand (this includes roughly 700 green, non ripe female Chinook currently in the pond).

Forks Creek Hatchery

To-date, no fall Chinook have entered the Forks Creek Hatchery.

Commercial Fishery

The commercial fishery has been opened in all commercial fishing areas since Sunday, Sept 15 with each commercial area having a different number of days scheduled for each week.

Effort has been as expected but overall Chinook and coho catch has been below expectations compared to the preseason projections. There has been a total of 3,129 hatchery Chinook salmon (74.4% of total hatchery preseason estimates), 13,529 coho (43.5% of preseason estimates), and 96 Chum (0.3% of preseason estimates) landed to-date. In total, the fleet has accrued a total of 140 local, natural origin (NOR) Chinook impacts to-date for the season, or 34.1% of the preseason NOR Chinook estimated impacts.

As always, in-season data is preliminary and subject to change.

All data provided through these weekly email updates for the months of August and September will be posted to the Willapa Bay Marine Area 2.1 Recreational Creel Monitoring page of our website listed below.

If you have any comments or questions specific to the information provided in these emails, please submit your comments to WillapaBay@dfw.wa.gov. Additionally, if you know of anyone who might be interested in receiving these in-season update emails or any other information staff send out regarding Willapa Bay, please forward this email and have them reply to WillapaBay@dfw.wa.gov stating they would like to be added to our email distribution list.

Thank you and Fish On! ><(((°> ><(((°>
