

# Resident Native Trout Harvest Management

## Draft Policy Language

Steve Caromile  
Inland Fish Program Manager

# Outline of Presentation

- Background – Trout Harvest Management
- Draft Policy
  - Purpose
  - Policy Objectives
  - Guiding Principles
  - Adaptive Management
  - Delegation of Authority
- Next Steps
- Questions/Discussion

# Background - Trout Harvest Management

- *Stay tuned – deeper dive in March*
- *A Basic Fishery Management Strategy For Resident and Anadromous Trout in the Stream Habitats of the State of WA.*
  - *Developed in 1984 to meet the conservation objectives of resident and anadromous trout pops.*
  - *Literature review*
  - *Emphasis on directed mgmt. approaches that prevent overfishing and be resistant to increased angler effort.*
- *Statewide freshwater species fishing rules should cover the most common situation with “Special Rules” handling the exceptions.*
  - *Separated Streams and Lakes*
  - *Minimum Size limits*
  - *Harvest limits*
  - *Seasons*

# Background - Trout Harvest Management

- *In streams, management must meet needs of four distinct types of trout populations. Accomplished with Special Rules.*
  - *Migratory and non-migratory resident trout*
  - *Steelhead trout*
  - *Anadromous cutthroat*
- *Adaptive management*
  - *Added multiple rules over time*
  - *Sea-run cutthroat closure*
  - *14" minimum for migratory trout*
  - *Mark selective rainbow trout fishery in FDR (Lake Roosevelt)*
  - *Closures/Release wild rainbow trout*

# Purpose

*This policy addresses recreational fishing opportunities for resident native trout (*Oncorhynchus* spp.). Guidance for native char species (*Salvelinus* spp.) is provided within state and federal recovery plans and permits. Guidance for non-native trout and char species is provided within the Commission's non-native game fish policy (C-3632).*

# Policy Objectives

The Department acknowledges that both *O. mykiss* and *O. clarkii* exhibit diverse life-history strategies, each having resident (including fluvial and adfluvial life histories) and anadromous forms with each form providing some contribution to the other. The portion of each life-history strategy and its rate of contribution to the other is dependent on a variety of environmental conditions and are highly variable.

# Policy Objectives (continued)

The Department is directed through legislation to preserve, protect, perpetuate, and manage fisheries resources. The Fish and Wildlife Commission (FWC) further directs Department staff through commission policy and the strategic plan. Department staff implements these directives through monitoring and enhancement activities and a variety of fishing rules to achieve conservation objectives while providing fishing opportunity. The ‘stream strategy’ – developed in 1984 – established a science-based management paradigm for resident trout and serves as the foundation for native trout regulations. Since its development and advancements in our knowledge and understanding, the department has implemented site-specific rules to provide additional protection and/or diversify fishing opportunity where needed.

# Policy Objectives (continued)

It is the intent of this policy to affirm basic principles of management and provide additional guidance to the Department, to:

- *Maintain consistency with state laws, rules, commission policies, and species conservation plans.*
- *Maintain science-based conservation principle for the assessment and management of resident native trout.*
- *Develop and implement appropriate fishing rules;*
  - *As a priority, fishing rules should seek to achieve conservation objectives for resident native trout.*
  - *Where appropriate, fishing rules may provide for diverse and sustainable recreational fishing opportunities.*
- *Use best available science when developing fishing rules.*

# Guiding Principles

*In implementing this policy, statewide freshwater species fishing rules should cover the most common situation with “Special Rules” handling the exceptions. The following describe the guiding principles when developing fishing rules. The department will promulgate fishing rules that:*

- *are biologically based.*
- *separate rules for streams and lakes.*
- *ensure the majority of native trout have spawned at least once prior to attaining harvestable size.*
- *consider impacts to resident native trout.*
- *consider impacts to migratory life histories of native trout.*
- *consider impacts to anadromous salmonids.*
- *consider impacts to native species of concern.*
- *consistent with conservation objectives provide a diversity of sustainable recreational fishing opportunity.*

# Adaptive Management

Department staff will use adaptive management to inform regulatory decision-making and management of resident native trout. This process will be informed by science-based recommendations and technical information from available data on population status and the recreational effort and harvest of resident native trout to determine if population conservation and management objectives are being achieved. If objectives are not being achieved, Department staff should consider if fishing rules should be altered, and re-evaluated until objectives are achieved.

# Delegation of Authority

The Commission delegates the authority to the Director to set fishing rules for recreational fisheries for resident native trout in the inland freshwaters of the state.

This guidance establishes principles for the Director and department staff to apply when managing the fisheries for resident native trout. The Commission fully expects that the Director and department staff will continue to communicate with the public and the Commission, to consider new information, evaluate alternate means for carrying out policy objectives.

# Next Steps

Step	Date	Task
1	Nov 2023	<b>Develop scope/timeline</b>
2	Dec 2023	Fish Committee: Share scope/timeline
3	Jan 2024	Tribal coordination letter
4	Jan 2024	Town Hall #1: Outreach to share approved scope/timeline
5		Staff develop initial draft
6	Jun 2024	Touch base with Fish Committee
7	Jun 2024	Town Hall #2: share initial draft policy
8		Staff evaluate/incorporate public comment
→ 9	Dec 2024	Present initial draft with Fish Committee
10	Jan 2025	Town Hall #3: Share draft policy
11	Feb 2025	Tribal coordination/input
12	Mar 2025	<b>SEPA</b>
13	Apr 2025	Share SEPA comments with Fish Committee/Commission
14		Evaluate and summarize for public comment
15	Jun 2025	Share draft policy with Fish Committee
16	Aug 2025	Full Committee/Commission briefing/public comment
17	Sep 2025	<b>Commission decision</b>
18	Sep 2025	Communicate final policy decision

# Questions and Discussion
