I support.

Historical aerial photos indicate sections of this property were occupied by orchard when the pesticide lead arsenate was applied, often resulting in shallow soil contamination from lead and/or arsenic. Ecology doesn't require soil sampling; however, there is a high likelihood that sections of this project have soil with elevated concentrations of lead and arsenic. Additional information, including precautions you can take to reduce exposure, is available at Ecology's Dirt Alert Website. Please contact Hector Casique, Project Manager, at (509) 208-1288 or email hector.casique@ecy.wa.gov, if you have additional questions. For more information about Healthy Action on former orchard lands contact Tina Wilson, Education and Community outreach, at 509-208-4383 or email Tina.Wilson@ecy.wa.gov.
