Pacific hagfish	Eptatretus stouti	Myxini		

These species are currently tagged in a WDFW database as PHS species without <i>population</i> -level concerns but considered vulnerable when in concentrations (like waterfowl, shorebirds, breeding concentrations, nurseries)					
These species may also have some habitat concerns due to changing ocean conditions, pollution effects, life stage use of different habitats, or losses in stopovers, shorelines, or nearshore.					
They may be represented in the SWAP conservation actions, considered for SWAP inclusion in vulnerable aggregations and important habitat pieces, but will not be stand-alone SGCN or SGIN
