

Serving on the Elk Hoof Disease Public Working Group

It is anticipated that the Elk Hoof Disease Public Working Group will meet approximately every month to two months, or as needed, pending the progress of the hoof disease investigation and results. This Working Group is specific to hoof disease and members were invited to represent the diverse interest/stakeholders in this phenomenon in Southwest Washington. Currently we do not have terms or positions identified for members of the Working Group. This may change as we learn more about the disease.
