

# Summary of 2017 Northern Pike Suppression Results on Box Canyon Reservoir, Pend Oreille River, WA.

During this year of mechanical suppression of Northern Pike (NP) in Box Canyon Reservoir, crews deployed 220 nets and removed 34 northern pike between March 6 and April 20, with a final catch-perunit-effort (CPUE) of 0.15 NP/net-night. The Kalispel Natural Resources Department and Washington Department of Fish and Wildlife collected 4 Northern Pike during the 2017 Spring Pike Index Netting (SPIN) Survey conducted May 1 through May 3. The resulting CPUE of 0.06 NP/ net-night (95% CI:  $\pm$  0.09), in sloughs and mainstem river between Riverbend and Pioneer Park Campground met the abundance target of  $\leq$  1.73 NP/net-night for these sections of the reservoir. The CPUE north of Riverbend was 0.10 NP/net-night and was below the target of  $\leq$  0.50 NP/net-night. There was no Phase 2 (post SPIN) mechanical suppression effort implemented in 2017.

In total, 17,193 NP were removed during the ongoing suppression effort in Box Canyon Reservoir which began in 2012

## Phase 1 - Mechanical Removal March 6-April 20:

- > Netting took place in known spawning locations throughout the reservoir
- > Two 3 man crews worked 4 days per week deploying 30 nets per day
- Collected biological information such as weight, length, sex and maturity on all Northern Pike caught
- Total nets deployed: 220
- > Overall CPUE: 0.15 NP/ net-night

Phase 1 northern pike catch summary (Table 1):

- Total catch: 34 NP, 0.061 mT (134.3 lbs)
- Overall size range: 462 mm to 890 mm TL (18-35 inches), weight: 631 g to 5,670 g (1.4 to 12.5 lbs.)
- Males averaged 572 mm TL (22 inches)
- Females averaged 671 mm TL (26 inches)
- Females made up an estimated 51% of the total catch, of which an estimated 94% were mature, ripe or spawned out (Table 2)
- Removed 13 mature pre-spawn females and 1 immature female
- > All NP were over 450 mm TL (18 inches)

#### **Mechanical Suppression Bycatch Summary:**

> 19 fish species, 2,955 individuals, >90% survival (Table 3)

#### Spring Pike Index Netting May 1-May 3

- Net placement sites were selected using a reservoir-wide spatially balanced random sampling design
- Collected biological information such as weight, length, sex and maturity, as well as growth structures for later analysis on all NP collected
- > Total nets deployed: 60
- CPUE for the mainstem river north of Riverbend was 0.10 NP/net-night (target ≤ 0.5); CPUE for all sloughs and mainstem river south of Riverbend was 0.06 NP/net-night (target ≤1.73)

SPIN catch summary (Table 1)

- Total catch: 4 NP, 0.02 mT (32.7 lbs)
- > Overall size range: 671 mm to 950 mm TL (26-37 inches), 2,035 g to 8,000 g (4.5-17.6 lbs.)
- Males averaged 709 mm TL (28 inches), 2,282 g (5 lb)
- > One female was caught, measuring 950 mm TL (37 inches) and weighed 8,000 g (17.6 lbs)
