DETERMINATION OF NONSIGNIFICANCE (DNS)

Name of Proposal: FALLERT CREEK HATCHERY GENERATOR REPLACEMENT

Description of Proposal: This project includes removing the existing generator and diesel lines from the hatchery intake (pump house) building near the Kalama River, and installing a new generator on the landward side of Kalama River road (adjacent to the fuel storage tank), on the grounds of the WDFW Fallert Creek Hatchery. A 24 inch deep trench by approximately 60 to 80 feet in length will need to be opened up on the landward side of the Kalama River road to install new electrical conduits. The trench will then be backfilled with the excavated materials after new wires are installed. A locating wire and warning ribbon will be installed within the first 12 inches of the surface. The new conduits will then be pushed through an existing chase (under Kalama River Road) to be connected to the hatchery intake building electrical service. An approximate 6 feet wide by 15 foot long concrete pad will be installed as a base to support the new weather tight generator.
