### DETERMINATION OF NONSIGNIFICANCE (DNS)

**Name of Proposal:** NORTH FORK WASHOUGAL WIER AND FISH HANDLING FACILITY

**Description of Proposal:**

The project includes development of a barrier weir just upstream of the existing adult collection ladder. The barrier will prevent fish from migrating upstream and guide adult salmonids, including steelhead, into the adult collection ladder. The project also includes modifications to the adult holding pond that will allow direct transfer of natural-origin adults, via a return pipeline, to a deep pool in the river near the holding pond. Natural-origin adults returned to the river could continue their upstream migration or hold until flows are adequate for continued upstream migration.

Design drawings provided by MWH Americas are attached. The project can be divided into three primary components: Work above OHWM; work below OHWM; and site restoration/cleanup. Below is a brief construction sequence and more detail about the primary components of the project.

#### *Sequencing*

- Install temporary erosion and sediment controls.
- Place Phase 1 cofferdam and divert river to the south.
- Remove existing rip/rap and excavate for north abutment.
- Construct north half of barrier weir and abutment.
- Backfill north abutment and construct low retaining wall.
- Install fish return pipe.
- Replace rip/rap.
- Remove Phase 1 cofferdam.
- Place Phase 2 cofferdam and divert river through stoplog section of barrier weir.
  
- Construct south half of barrier weir and south abutment.
- Backfill south abutment and place rip/rap.
- Remove Phase 2 cofferdam.
- Construct low earthen berm and hydroseed.
- Remove temporary sediment and erosion controls.
