---

Hi Doug,

Thank you. I think this is an adequate plan. I appreciate the 2:1 ratio which helps to address temporal impacts. My only suggestion would be to include some planting instructions (like plant in October-February so the trees don't just die, since I assume they won't be watered), performance standards (100% survival first 2 years, 90% survival years 3-5) and a monitoring plan. It doesn't do much good to install mitigation plantings if the trees do not survive.

Thank you for the opportunity to comment.

Sincerely,

Matt

**Subject:** RE: trap-and-haul release site relocation

Hi Matt,

Thank you for your questions.

Attached is the Planting plan portion of the Vegetation Report for the Shoreline Package.

I'm open to suggestions; though this is the way our plan reads in our submittal to the county.

Thanks again,  
Douglas

Hello Lisa, Doug, or whomever is the responsible official,

Can you please provide more detail how the trees and shrubs that will be cut for the release site will be replaced? Species, number, location, etc.? Thank you.

Sincerely,  
Matt

**Subject:** trap-and-haul release site relocation

Hello Mr. Mackey,

We received the SEPA notice for the relocation. Has WDFW considered any mitigation for removing riparian vegetation?

Thanks,

Matt
