Date: Friday, October 21, 2016 2:16:09 PM

Hello

Steps are being taken to define requirements and get Army Corp of Engineering involvement in the permitting process for our irrigation repair project. Andrea provided me with the name of the Army Corp of Engineer representative for our region (Dale Jordan). I have contacted Dale several times and have provided him drawings, maps, system description and various documents for him to begin evaluating our project. I have also contacted Martin Walther with DOE dam safety who is working with our local design engineer and water master to determine the engineering requirements for future flows and flood control. Once their work is completed with soil test information provided by Nelson Geotechnical we will have a full safety by-off from Martin. Work is on going and I will respond with answers when available.

Thanks
Jerome Thiel
