Hello Gwen / Lisa

I have contacted Martin Walther in the DOE dam safety office. He is working with our local engineer and our water master to define a spillway design to handle future flows and comply with flood safety. They are currently waiting for results from Nelson Geotechnical. We hired this firm to take soil samples around the immediate area for compaction qualities and from those results, Martin will make recommendations on what materials should be used and in what manner they should be layered and mixed. Once this completed, he will stamp our repair project drawings as DOE certified and this will be the criteria that our contractor will follow in rebuilding the spillway on lake #5. I will keep you updated as these items are completed.

Thank You
Jerome Thiel
