**Subject:** Response - Clarks Creek Hatchery Rehabilitation Project (DNS 17-012) ECY Comments  
**Date:** Wednesday, April 12, 2017 9:53:53 AM

---

Sonia, thank-you for the comments you sent regarding the SEPA Checklist submitted for the Clarks Creek Project proposed by WDFW. WDFW has read and considered your comments and offer the following responses:

**Toxic Cleanup** - WDFW will monitor for contamination during all construction and follow notification procedures identified in your comment letter if any contamination is discovered.

**Water Quality** - Erosion control measures will be in place prior to clearing, grading or construction. Control measures will be in compliance with the Western Washington Stormwater Manual. We do recognize the need to acquire a Construction Stormwater General Permit and will be making that application before this project begins.

Thanks again for your comments,
