Re: Winchester Wasteway Boat Launch Relocation, File # 17-021; PN-EFO-CE-2017-07

Dear Ms. Wood:

Thank you for the opportunity to comment on the Determination of Nonsignificance regarding the proposal to replace and relocate an existing primitive boat launch, install silt fencing across the project site, and place 320 cubic yards of 6-inch (base) quarry spalls and ¾-inch (top) crushed rock (Proponent: Washington Department of Fish and Wildlife). The Department of Ecology (Ecology) has reviewed the documents and submits the following comments:

Hazardous Waste and Toxics Reduction Program-Andrew Maher (509) 329-3612

Wastes produced during construction or remodeling can be dangerous wastes in Washington State. Some of these wastes include: Absorbent material, aerosol cans, asbestos-containing materials, lead-containing materials, PCB-containing light ballasts, waste paint, waste paint thinner, sanding dust and treated wood.

The Common Construction and Demolition Wastes website has a more comprehensive list and a link to identifying and designating your wastes. This can be found on line at: http://www.ecy.wa.gov/programs/hwtr/dangermat/common_demo_wastes.html

Responsibility for construction waste generated at a facility is the responsibility of the facility that generates the waste. More information about who is responsible for properly managing construction debris can be found at: http://www.ecy.wa.gov/programs/hwtr/dangermat/demo_responsibility.html

In order to adequately identify some of your construction and remodel debris, you may need to sample and test the wastes generated to determine whether they are dangerous
