

SEPA ENVIRONMENTAL CHECKLIST

Purpose of checklist:

Governmental agencies use this checklist to help determine whether the environmental impacts of your proposal are significant. This information is also helpful to determine if available avoidance, minimization or compensatory mitigation measures will address the probable significant impacts or if an environmental impact statement will be prepared to further analyze the proposal.

Instructions for applicants:

This environmental checklist asks you to describe some basic information about your proposal. Please answer each question accurately and carefully, to the best of your knowledge. You may need to consult with an agency specialist or private consultant for some questions. You may use "not applicable" or "does not apply" only when you can explain why it does not apply and not when the answer is unknown. You may also attach or incorporate by reference additional studies reports. Complete and accurate answers to these questions often avoid delays with the SEPA process as well as later in the decision-making process.

The checklist questions apply to all parts of your proposal, even if you plan to do them over a period of time or on different parcels of land. Attach any additional information that will help describe your proposal or its environmental effects. The agency to which you submit this checklist may ask you to explain your answers or provide additional information reasonably related to determining if there may be significant adverse impact.

Instructions for Lead Agencies:

Please adjust the format of this template as needed. Additional information may be necessary to evaluate the existing environment, all interrelated aspects of the proposal and an analysis of adverse impacts. The checklist is considered the first but not necessarily the only source of information needed to make an adequate threshold determination. Once a threshold determination is made, the lead agency is responsible for the completeness and accuracy of the checklist and other supporting documents.

Use of checklist for nonproject proposals:

For nonproject proposals (such as ordinances, regulations, plans and programs), complete the applicable parts of sections A and B plus the [SUPPLEMENTAL SHEET FOR NONPROJECT ACTIONS \(part D\)](#). Please completely answer all questions that apply and note that the words "project," "applicant," and "property or site" should be read as "proposal," "proponent," and "affected geographic area," respectively. The lead agency may exclude (for non-projects) questions in Part B - Environmental Elements –that do not contribute meaningfully to the analysis of the proposal.

A. Background [\[HELP\]](#)

1. Name of proposed project, if applicable:

Ahtanum Creek Herke Fish Screening Project

2. Name of applicant:

North Yakima Conservation District (NYCD)

3. Address and phone number of applicant and contact person:

Justin Bader, Yakima Tributary Access and Habitat Program (YTAHP Coordinator)

1606 Perry Street, Suite C

Yakima, WA 98902

509-454-5743 x8551

Justin-bader@conserveva.net

4. Date checklist prepared:

September 12, 2018

5. Agency requesting checklist:

Washington Department of Fish & Wildlife

6. Proposed timing or schedule (including phasing, if applicable):

The project will be constructed when the necessary permits are in place and within the timeframe of October and December, 2018.

7. Do you have any plans for future additions, expansion, or further activity related to or connected with this proposal? If yes, explain.

The proposed project is planned for implementation in two phases. Phase I is proposed for construction in fall 2018 and phase II is proposed for construction in fall 2019. This SEPA is only for phase I. Phase II involves adding large wood habitat structures to the stream and installing a roughened channel to ensure excellent year-round fish passage for anadromous and resident fish.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.

Cultural Resources Survey Report

Engineering Designs and Memo

Permit applications, including ESA documentation

Salmon Recovery Funding Board grant application

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

None known

10. List any government approvals or permits that will be needed for your proposal, if known.

ESA Section 7 Consultation with USFWS and NOAA Fisheries

NHPA Section 106 Consultation with DAHP, THPO and Yakama Nation

CWA Section 404 Permit from US Corps of Engineers

CWA Section 401 Permit from Environmental Protection Agency

HPA from Washington Department of Fish and Wildlife

Hydraulics Project Permit from Yakama Nation

Shoreline/CAO authorization from Yakima County

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)

The Ahtanum Creek Herke Fish Screening Project will screen one of the last remaining unscreened and uncontrolled irrigation diversions in the Ahtanum Watershed. A fish screen compliant with WDFW and NMFS criteria will be installed, eliminating fish entrainment into the existing gravity diversion. The screen is a paddlewheel driven rotary drum fish screen with 3/32" mesh. This is a standard rotary drum screen design that meets state and federal fish screening criteria. Components of the fish screen include the headwall and pipe to the fish screen, fish bypass pipe and a water measuring device.

In addition to the fish screen, two rock weirs will be installed in the irrigation delivery channel to account for future headcutting up the channel and to provide grade control to operate the fish screen compliantly, two small berms will be installed around the fish screen to prevent flood flows from entraining fish behind the fish screen, and an existing ford will be improved to provide access to the fish screen for operations and maintenance needs.

ESA listed Middle Columbia Steelhead and Columbia River bull trout are present in Ahtanum Creek, as well as culturally important Chinook and coho salmon, Pacific lamprey, and numerous other native fishes. Completion of this project is a high priority for WDFW and the Yakama Nation as well as NOAA Fisheries and USFWS. Upon completion, fish will no longer be entrained into the ditch and the water diverted from Ahtanum Creek will be controlled and measured.

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

The project is located on the south side of Ahtanum Creek in Yakima County on Yakama Nation Reservation land owned by the Confederated Tribes and Bands of the Yakama Nation.

1. WRIA 37 Lower Yakima River
2. Approximately River Mile 25 of Ahtanum Creek
3. SE ¼ Section 16, Township 12N, Range 16E
4. 46.525600°, -121.824940° (approximate location of fish screen)
5. Yakama Nation Parcel T-963
6. 19320 Ahtanum Road, Yakima, WA 98903 (Project site is accessed through the Herke property)

B. Environmental Elements [\[HELP\]](#)

1. Earth [\[help\]](#)

a. General description of the site:

(circle one): Flat, rolling, hilly, steep slopes, mountainous, other
Flat

b. What is the steepest slope on the site (approximate percent slope)?

5%

- c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any agricultural land of long-term commercial significance and whether the proposal results in removing any of these soils.

The soils are primarily weirman sandy loam.

- d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

The project area is within the floodplain of Ahtanum Creek. At the project location there is a broad floodplain that is largely disconnected from the stream under all but flood conditions. The stream has remained relatively stable within the immediate vicinity of the project. Cottonwood trees, willows, red osier dogwood, and woods rose make up the majority of the riparian habitat community although it is sparse due to somewhat incised channel conditions, confinement of the channel, and livestock grazing.

- e. Describe the purpose, type, total area, and approximate quantities and total affected area of any filling, excavation, and grading proposed. Indicate source of fill.

- **The irrigation Point of Diversion will be excavated, resulting in approximately 10CY of material will be reworked.**
- **A hardened ford stream crossing on the irrigation delivery channel will be improved in order to provide access for annual maintenance at the point of diversion; approximately 10CY of material being placed.**
- **Two rock weirs will be constructed for grade control on the irrigation delivery channel, resulting in approximately 8CY of material being placed.**
- **Two small berms (~24" high) will be constructed around the fish screen to prevent flood flows from entraining fish behind the fish screen; approximately 35CY of material will be placed.**
- **The location of the fish screen will be excavated in order to install the fish screen. The pipe between the headwall and fish screen will be backfilled. Approximately 80CY of material will be placed, reworked and graded.**

The material will be brought in from a local gravel pit and some spoils from local excavation will be utilized. It will be placed with an excavator or backhoe.

- f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

There will be minor clearing and grading around the fish screen. Erosion control best management practices will be prepared and carried out.

- g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

<1%

- h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:

Work will occur in isolation from flowing water to minimize impacts to aquatic life and water quality. Erosion control best management practices will be prepared and carried out.

2. Air [\[help\]](#)

- a. What types of emissions to the air would result from the proposal during construction, operation, and maintenance when the project is completed? If any, generally describe and give approximate quantities if known.

There will be temporary emissions associated with the equipment operation necessary to install the fish screen and associated project elements (discussed above). Project personnel will access the site via vehicle. There should be no measurable impact to air quality.

- b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

No.

- c. Proposed measures to reduce or control emissions or other impacts to air, if any:

Project personnel will carpool to the work area as much as possible and vehicles will be turned off when not in use.

3. Water [\[help\]](#)

- a. Surface Water: [\[help\]](#)

- 1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

Yes, Ahtanum Creek. Ahtanum Creek is a tributary to the Yakima River.

- 2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

Yes. The irrigation delivery channel, which is currently functioning as a managed side channel of Ahtanum Creek, will be dewatered and work will occur in the dry to minimize impacts to aquatic species. Work will be permitted by the Yakama Indian Nation and the Washington Department of Fish & Wildlife (WDFW). WDFW and/or YN biologists will lead fish rescue efforts.

- 3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

Material will be imported for the backfill of the headgate, piping to and from the fish screen, fish screen, hardened crossing and weirs, resulting in approximately 98CY of material to be placed.

- 4) Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities if known.

The irrigation delivery channel, which is currently functioning as a managed side channel of Ahtanum Creek, will be dewatered. Flow will be diverted into the mainstem Ahtanum Creek.

- 5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.

The project site is not mapped as being within the 100-year floodplain.

6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

No.

b. Ground Water: [\[help\]](#)

1) Will groundwater be withdrawn from a well for drinking water or other purposes? If so, give a general description of the well, proposed uses and approximate quantities withdrawn from the well. Will water be discharged to groundwater? Give general description, purpose, and approximate quantities if known.

No.

2) Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage; industrial, containing the following chemicals. . . ; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

None.

c. Water runoff (including stormwater):

1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

This project is not likely to impact the amount or material associated with runoff, including storm water runoff events. If needed, WDFW will operate a 2"-diameter trash pump to pump muddy water from excavations. The water will be discharged on flat ground within 100-feet of the project for infiltration into the ground.

2) Could waste materials enter ground or surface waters? If so, generally describe.
No. If needed, WDFW will operate a 2"-diameter trash pump to pump muddy water from excavations. The water will be discharged on flat ground within 100-feet of the project for infiltration into the ground.

3) Does the proposal alter or otherwise affect drainage patterns in the vicinity of the site? If so, describe.

The project is not anticipated to affect drainage patterns. The project will screen a currently unscreened and uncontrolled gravity irrigation diversion. The screen will be sized to adequately deliver the irrigator's adjudicated water right and comply with NMFS and WDFW fish screening criteria.

d. Proposed measures to reduce or control surface, ground, and runoff water, and drainage pattern impacts, if any:

This project is designed as an aquatic habitat enhancement project. Work will be completed in isolation from flowing water to minimize impacts to aquatic community. Erosion control best management practice will be carried out.

4. **Plants** [\[help\]](#)

a. Check the types of vegetation found on the site:

- deciduous tree: alder, maple, aspen, other
- evergreen tree: fir, cedar, pine, other
- shrubs
- grass
- pasture
- crop or grain
- Orchards, vineyards or other permanent crops.
- wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other
- water plants: water lily, eelgrass, milfoil, other
- other types of vegetation

b. What kind and amount of vegetation will be removed or altered?

There will be minor clearing and grubbing in order to install the fish screen and associated elements. Disturbed soils will be planted, seeded, and/or mulched upon completion of the project.

c. List threatened and endangered species known to be on or near the site.

Ute Ladies'-Tresses is not known to occur in the project area, but could potentially be in the vicinity.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Native riparian trees and shrubs will be planted in the disturbed areas upon completion of the project.

e. List all noxious weeds and invasive species known to be on or near the site.

Potential noxious weeds/invasive species that may be on or near the project site include:

**Canada thistle
Bull thistle
Chicory
Common mullein
Diffuse knapweed
Gypsy flower
Ventenata**

5. **Animals** [\[help\]](#)

a. List any birds and other animals which have been observed on or near the site or are known to be on or near the site.

- **Birds: Northern goshawk; flammulated owl; great horned owl; golden eagle; White-headed woodpecker; songbirds; quail; grouse**
- **Mammals: elk; mule deer; bear; beaver**
- **Fish: steelhead and rainbow trout; spring Chinook and coho salmon; westslope cutthroat; bull trout; Pacific lamprey; brook lamprey**

- **Reptiles and amphibians: Northern alligator lizard; western fence lizard; western rattlesnake; ring-necked snake; racer; common garter snake; Columbia spotted frog; rubber boa; western toad**

b. List any threatened and endangered species known to be on or near the site.
ESA listed Middle Columbia River Steelhead and Columbia River Bull Trout are present in Ahtanum Creek. Installing a NOAA Fisheries and WDFW compliant fish screen on the currently unscreened gravity diversion will have a direct benefit to steelhead and bull trout in Ahtanum Creek.

c. Is the site part of a migration route? If so, explain.
Ahtanum Creek is a migration corridor for salmon, steelhead and Pacific lamprey.

d. Proposed measures to preserve or enhance wildlife, if any:
The project has been designed and funded as a fish habitat enhancement project. The project will screen an unscreened gravity diversion, eliminating the entrainment of fish into the irrigation channel and out into agricultural fields. The project will result in reduced disturbance to instream and riparian wetland habitat on an annual basis. Eliminating the need for an annual push-up dam will allow native riparian and wetland vegetation to establish and create higher functioning habitat.

e. List any invasive animal species known to be on or near the site.
No known invasive animal species are present.

6. Energy and Natural Resources [\[help\]](#)

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Upon completion, there will be no need for an energy source at the project site.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

No.

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any:

None.

7. Environmental Health [\[help\]](#)

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur as a result of this proposal? If so, describe.

There is a remote chance that petroleum products could leak from the equipment or vehicles onto the ground. All equipment will be kept in good working condition to minimize this risk. All equipment will have an approved spill kit to contain and clean up spills if they should occur.

1) Describe any known or possible contamination at the site from present or past uses.

None known.

- 2) Describe existing hazardous chemicals/conditions that might affect project development and design. This includes underground hazardous liquid and gas transmission pipelines located within the project area and in the vicinity.

None known.

- 3) Describe any toxic or hazardous chemicals that might be stored, used, or produced during the project's development or construction, or at any time during the operating life of the project.

A truck equipped with a fuel truck may be on site during construction. No toxic or hazardous chemicals will be stored on site after implementation.

- 4) Describe special emergency services that might be required.

In the event of an oil or gas spill, the Washington Department of Ecology and Washington Department of Fish & Wildlife will be notified immediately.

- 5) Proposed measures to reduce or control environmental health hazards, if any:

All equipment will be kept in good working condition to minimize this risk. All equipment will have an approved spill kit to contain and clean up spills if they should occur.

b. Noise

- 1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

None.

- 2) What types and levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.

There will be short-term noise from the equipment used to construct the project elements. The work will occur during daylight hours Monday – Friday, with a possibility of Saturday work. There will be no long-term increase in noise due to this project.

- 3) Proposed measures to reduce or control noise impacts, if any:

Equipment will be operational during daylight hours. Traffic noise will be reduced by carpooling as much as possible to the project site and turning off equipment when it is not in use.

8. Land and Shoreline Use [\[help\]](#)

- a. What is the current use of the site and adjacent properties? Will the proposal affect current land uses on nearby or adjacent properties? If so, describe.

The project is on the Yakama Nation Reservation and access to the project site is through private property. The project will not adversely affect land use on nearby or adjacent properties.

- b. Has the project site been used as working farmlands or working forest lands? If so, describe. How much agricultural or forest land of long-term commercial significance will be converted to other uses as a result of the proposal, if any? If resource lands have not been designated,

how many acres in farmland or forest land tax status will be converted to nonfarm or nonforest use?

The irrigation diversion to be screened with implementation of this project delivers water to working agricultural land. This project does not propose to change the use of any land.

1) Will the proposal affect or be affected by surrounding working farm or forest land normal business operations, such as oversize equipment access, the application of pesticides, tilling, and harvesting? If so, how:

No. The project will be implemented after the irrigation season has ended and will not disrupt working farm or forest land business operations.

c. Describe any structures on the site.

There is currently an unscreened and uncontrolled gravity diversion at the project site. The diversion is created by the landowner using heavy equipment in the stream to pile up streambed material on an annual basis to divert water down the irrigation channel. These "push up berms" can create fish passage barriers under certain conditions and they are an annual disturbance to the streambed, further degrading fish habitat.

d. Will any structures be demolished? If so, what?

Upon completion of the project, there will no longer be a need for the push-up berm.

e. What is the current zoning classification of the site?

Yakima County Zoning YCC Title 19: Yakama Nation Closed Area

f. What is the current comprehensive plan designation of the site?

Type 1 Stream

g. If applicable, what is the current shoreline master program designation of the site?

h. Has any part of the site been classified as a critical area by the city or county? If so, specify.

The project is in a Conservancy Critical Area.

i. Approximately how many people would reside or work in the completed project?

None.

j. Approximately how many people would the completed project displace?

None.

k. Proposed measures to avoid or reduce displacement impacts, if any:

Not applicable.

l. Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:

This project is a collaborative effort that is supported by the Yakima Tributary Access & Habitat Program, Yakama Nation Fisheries, Washington Department of Fish & Wildlife and others. It will not adversely affect or change existing or projected land use.

m. Proposed measures to reduce or control impacts to agricultural and forest lands of long-term commercial significance, if any:

None.

9. Housing [\[help\]](#)

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.

None.

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.

None.

c. Proposed measures to reduce or control housing impacts, if any:

None.

10. Aesthetics [\[help\]](#)

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

The fish screen is approximately 6 feet in height.

b. What views in the immediate vicinity would be altered or obstructed?

None.

b. Proposed measures to reduce or control aesthetic impacts, if any:

None.

11. Light and Glare [\[help\]](#)

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

None.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

No.

c. What existing off-site sources of light or glare may affect your proposal?

None.

d. Proposed measures to reduce or control light and glare impacts, if any:

None.

12. Recreation [\[help\]](#)

a. What designated and informal recreational opportunities are in the immediate vicinity?
The site is on private property, therefore recreational opportunities are limited. Those with permission to be on the property may have interest in hiking, bird watching, hunting and fishing.

b. Would the proposed project displace any existing recreational uses? If so, describe.
No.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:

None. No recreational opportunities will be impacted.

13. Historic and cultural preservation [\[help\]](#)

a. Are there any buildings, structures, or sites, located on or near the site that are over 45 years old listed in or eligible for listing in national, state, or local preservation registers? If so, specifically describe.

None known to the project sponsor.

b. Are there any landmarks, features, or other evidence of Indian or historic use or occupation? This may include human burials or old cemeteries. Are there any material evidence, artifacts, or areas of cultural importance on or near the site? Please list any professional studies conducted at the site to identify such resources.

None known to the project sponsor.

c. Describe the methods used to assess the potential impacts to cultural and historic resources on or near the project site. Examples include consultation with tribes and the department of archeology and historic preservation, archaeological surveys, historic maps, GIS data, etc.

A Yakama Nation archaeologist conducted an archaeological assessment of the project's Area of Potential Effect (APE). In addition to the on-the-ground survey, a background review of historic maps and state records was conducted. The Cultural Resources Survey Report will not be distributed. The Yakama Nation is working with the Tribal Historic Preservation Officer (THPO) on National Historic Preservation Act Section 106 consultation and concurrence. The proposed project will not proceed until Section 106 consultation is complete.

d. Proposed measures to avoid, minimize, or compensate for loss, changes to, and disturbance to resources. Please include plans for the above and any permits that may be required.

We expect to continue consultation with the Yakama Nation and THPO. We will comply with all recommendations and requirements based on the Cultural Resources Survey Report and Section 106 consultation.

14. Transportation [\[help\]](#)

a. Identify public streets and highways serving the site or affected geographic area and describe proposed access to the existing street system. Show on site plans, if any.

Yakima County roads will be used to access the Herke property. A private access road will be used to access the project site.

b. Is the site or affected geographic area currently served by public transit? If so, generally describe. If not, what is the approximate distance to the nearest transit stop?

No.

c. How many additional parking spaces would the completed project or non-project proposal have? How many would the project or proposal eliminate?

None.

d. Will the proposal require any new or improvements to existing roads, streets, pedestrian, bicycle or state transportation facilities, not including driveways? If so, generally describe (indicate whether public or private).

No.

e. Will the project or proposal use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

No.

f. How many vehicular trips per day would be generated by the completed project or proposal? If known, indicate when peak volumes would occur and what percentage of the volume would be trucks (such as commercial and nonpassenger vehicles). What data or transportation models were used to make these estimates?

Not applicable.

g. Will the proposal interfere with, affect or be affected by the movement of agricultural and forest products on roads or streets in the area? If so, generally describe.

No.

h. Proposed measures to reduce or control transportation impacts, if any:

None.

15. Public Services [\[help\]](#)

a. Would the project result in an increased need for public services (for example: fire protection, police protection, public transit, health care, schools, other)? If so, generally describe.

No.

b. Proposed measures to reduce or control direct impacts on public services, if any.

None.

16. Utilities [\[help\]](#)

a. Circle utilities currently available at the site:
electricity, natural gas, water, refuse service, telephone, sanitary sewer, septic system,
other _____

Not known. A utility locate will be conducted prior to construction.

c. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

None.

C. Signature [\[HELP\]](#)

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.

Signature: Justin Bader

Name of signee Justin Bader

Position and Agency/Organization YTAHP Coordinator, North Yakima CD

Date Submitted: 9-18-18
