RE: Northwest Pipeline LLC (Northwest), Wenatchee Line Pipe Exposure – MP 131
SEPA DNS 18-072

Dear Ms. Clear,

I have received your comments regarding the above-referenced project. Specifically, that “erosion control measures must be in place prior to any clearing, grading, or construction. These control measures must prevent stormwater runoff from carrying soil into surface water or into stormwater drains that my discharge directly to surface water. Sand, silt, and soil will damage aquatic habitat and are considered pollutants.”

Northwest will install erosion control measures to prevent stormwater runoff to surface waters. All erosion controls will be installed prior to any clearing, grading, or construction. This will be communicated to the project team and construction contractor during the pre-construction meeting, and erosion controls will be monitored for effectiveness by Northwest during construction.

If you have any other comments or need additional information on this project, I am available to discuss further and address your concerns.

Sincerely,

A handwritten signature in blue ink that reads "Halli Harris". The signature is written in a cursive, flowing style.
